Peony blight (Botrytis peoniae Oud.) has caused serious loss to peony growers in several of the northeastern states, including Maryland and Pennsylvania, according to the Pennsylvania Bureau of Plant Industry. It infects stems, leaves and buds and is first noticed as a rot on the stem, causing them to wilt when four to eight inches high.

When young buds are attacked they turn black and dry up and this phase is called "bud blast." Larger buds when attacked turn brown and fail to open. If cut open the interior is found to be a decayed mass. This is spoken of as "bud rot." Opening flowers are attacked in the same manner.

Attacks on the leaves take the form of large circular, purple blotches which later turn brown.

Shoots are often attacked below ground and girdled so that they wilt and die. In the pith of such dead stalks there often occur small black pellets of the size of a wheat grain or larger. These fungus bodies serve to carry the fungus over winter.

The control of peony blight is rather difficult under the best circumstances and if the season is wet or there is much humid weather checking it is more difficult.

The first essential in the eradication is a clean garden. All old leaves, dead stalks and stubble right down to the permanent live root stalk should be taken away and burned in late fall. Some growers believe that a layer of clean sand over the crown helps to prevent the spread of the disease.

Never use fresh manure about the plants; use only well rotted compost or commercial fertilizers.

Watch the growing plant carefully. A daily inspection is really necessary, and if the disease appears in any part of the plant remove and burn at once all infected parts; all old flowers likewise should be destroed.

Spraying with Bordeaux mixture will help to hold the disease in check. Make the first application shortly after the leaves appear above ground, and repeat at frequent intervals.

---

The business of Hopkins, the Florist, of Brattleboro, Vt., has been incorporated. Carl S. Hopkins is president, Carl W. Hopkins, vice-president and manager of the greenhouses, and Royal W. Smith, treasurer and manager of the store.

## George Watson's Corner

"You in your small corner and me in mine."

Commodore Westcott and his good lady with other members of the family left Philadelphia July 21 for a sojourn at their seaside estate on Barnegat Bay. They have had a whiff of the Atlantic for a couple of weeks at Cape May; but that only whets one for the lovely Waretown breezes far to the northward.

---

Edwin G. Fancourt paid a visit to his old friend George W. Kerr, manager of the Burpee Farms at Doylestown, on July 18. He went to look over the elaborate Sweet Pea trials, and other important exhibits which are at their right shape just at this season of the year. For good company in the auto and otherwise, he was favored with the halo of two of the heroes of horticulture: Casper Pennock, the rose grower; and Samuel, the great distributor.

---

Our old friend Edward Flood was among one of the many who bumped into auto accidents on the recent Fourth. He was not hurt much, and a few days brought him around again all right. Ed Fancourt says, "I'm afraid the burgomaster is 'bad luck'! Don't you remember we butted into a pole at Barren Hill, one day, and busted the post office and the wireless and various other things." So, when he goes out with Rockwell, of course, they have to butt into something. I guess I was lucky not to be with them on this occasion. I wanted to be, but got left. Maybe just as well. Head and hide pretty tough, but there's a limit!

---

While Huban clover remains with us the timorous may again take heart of grace in these troublous times. They may rest assured that if they rely on this wonderful new clover the pillars of the Universe will remain unshaken. It not only roots deeper than any other clover; but it absorbs more nitrogen than any other. It will also grow quicker and produce heavier, and will grow on poorer soil. Every florist who wants a good rich sod, full of nitrogen, in short order, should look up this new development.

---

Our last call on Harry Bayersdorfer found him up to the eyes in business as he has always been. He feels that

this circulating around the world by way of Japan, India, and Arabia is not only interesting but it teaches us Americans a whole lot. Of course, Europe came in for a few visits. Rome, Copenhagen, a howdy to old Bill at Arnhem, with Madrid and Paris and London and a few other points sandwiched in.

---

Denny Connor seems to be doing a sunshine business. He could hardly stop to finish his dinner. Had to catch a train for Wenonah to sign a contract for a lot of new greenhouses. Wherever Wenonah is, says I. So I let him go and a couple of blocks later who should I run into at 13th and Chestnut but Keith Banner. Are you still up Doylestown way, says I? Oh, no, you don't seem to keep track of things, we are located over at Gladstone now, and have been there for over a year. A half hour later ran up against Ed Fancourt who was scratching his cranium and wanted to know where Montezuma was. To tell the truth I was puzzled about all three places but that glorious new atlas which I got at Wanamaker's for two dollars thirty-nine cents vindicated its usefulness and showed that yours truly had not been stung when he coughed up the cold cash.

---

You listen to the strikers arguing in a bunch at the street corner and this is the gist of it: The employers say we have got to take less wages and yet we have to pay higher rents so how the blankety blank are we going to live. If these men would only go back a few years and note that wages rose first when the war broke out. After a year or two of high wages the boys began to buy silk shirts and wanted better houses to live in. So the demand for better houses sent up the rents. Now that the hoorah is over, wages will have to come down before rents do. The one comes before the other. But the boys don't seem to be able to analyze the matter sensibly as they ought to, so they howl and go on strike.

---

Casper Pennock is an old hero in the rose growing end of the business, and runs a big range out in Lansdowne. He did not have that genial smile the other day when we ran across him. We said: "Why so solemn?" He said: "Go along with you! Don't want to talk to foolish kids."

*When writing to advertisers kindly mention HORTICULTURE*

And he was right. A man naturally is solemn—when expenses keep up—coal, wages and so on, and prices go down on the product. Foolish question. Get along with you, kid! Maybe you'd be solemn too, if expenses were bigger than the income. But they, the growers, had their innings.

Andrew B. Kean who passed away mid-April was not in our business; but he was a close friend to many florists in Lansdowne, Philadelphia, and Lavalette, N. J. Bill Leonard, one of our most distinguished rose growers, wishes me to say that Andrew Kean was lovable because he had enthusiasm for something outside his regular business. If one have such an inborn gift—whether it be for perfection in rose growing, or the highest development in the art of swimming, we must admire his whole souled devotion to it. Andrew Kean loved roses and horticulture, and had a beautiful garden; but his fame will be everlasting as a swimming enthusiast. He accomplished great things in that direction, and his sons and daughters have also made good records in the same enthusiasm. He came to this country when 25, from Glasgow, Scotland. He gave the American people and himself many happy hours, and passed away, aged 63, full of happiness and the kindest regards of all his compeers.

## GARDENERS' AND FLORISTS' CLUB PICNIC

The Gardeners' and Florists' Club of Boston held its annual picnic at Cunningham Park, East Milton, Thursday afternoon of last week. There was a large attendance, and a long series of sports were indulged in. Particular interest was shown in the tug of war between the florists and the gardeners, the latter being easy winners.

Bronx Park, in New York, is to have a lilac garden which promises to equal the iris garden and the rose garden at that institution. Work is now under way

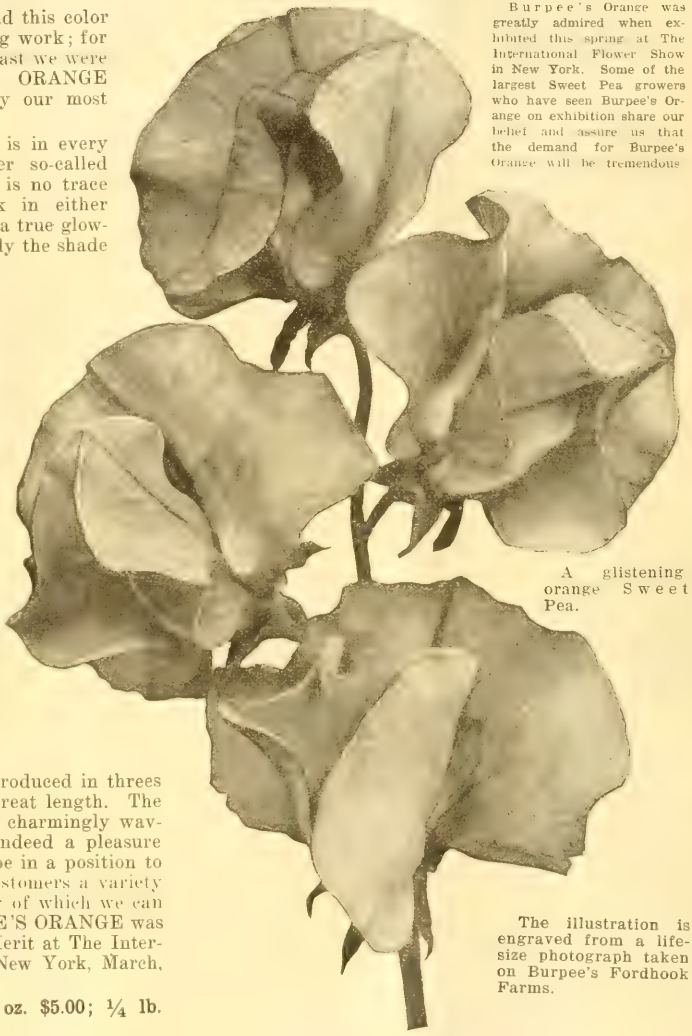
# BURPEE'S ORANGE

## Burpee's New Winter Flowering Sweet Pea

For many years we had this color in view in our hybridizing work; for long it eluded us but at last we were successful, BURPEE'S ORANGE even exceeding in beauty our most sanguine ambition.



BURPEE'S ORANGE is in every way distinct from other so-called orange varieties. There is no trace of pink or orange-pink in either standard or wings. It is a true glowing orange self, practically the shade of a bright ripe orange.

The rich glistening color compels attention in any light, but at night, under artificial light, it is indeed outstanding. BURPEE'S ORANGE has been proclaimed by experts and the press alike as being the greatest advance of many years in this type of Sweet Pea. In the opinion of many the vase of BURPEE'S ORANGE included in our Gold Medal Exhibit at The National Flower Show at Indianapolis, March, 1922, was the finest and most outstanding vase of Sweet Peas in the exhibition.

BURPEE'S ORANGE is a free grower, with flowers of largest size, produced in threes and fours on stems of great length. The standard and wings are charmingly waved or crinkled. It is indeed a pleasure and also a privilege to be in a position to offer our friends and customers a variety of such merit—a variety of which we can all feel proud. BURPEE'S ORANGE was awarded Certificate of Merit at The International Flower Show, New York, March, 1921.

**Trade packet $1.00; oz. $5.00; ¼ lb. $15.00; lb. $50.00.**

Burpee's Orange was greatly admired when exhibited this spring at The International Flower Show in New York. Some of the largest Sweet Pea growers who have seen Burpee's Orange on exhibition share our belief and assure us that the demand for Burpee's Orange will be tremendous

A glistening orange Sweet Pea.

The illustration is engraved from a life-size photograph taken on Burpee's Fordhook Farms.

### THE PRESIDENT HARDING

#### Burpee Company Names New Sweet Pea for Chief Executive

President Harding has given permission to the W. Atlee Burpee Co. to give his name to a new sweet pea. The request for this permission was contained in a telegram which reads as follows:

Hon. Warren G. Harding,
The White House,
Washington, D. C.

The National Sweet Pea Society of Great Britain has just made us the only award of merit for the finest new Sweet Pea this year. It is new variety we originated on our California Farms and which has won out in the English trials in competition with one hundred and five other new varieties from all parts of the world. This is the first time the English Society has ever given such an award to an American Sweet Pea. It will have international importance. May we have the honor of naming this grand new Sweet Pea The President Harding. It is necessary for us to cable the name to England before the award can be announced.

W. ATLEE BURPEE CO.

The President made a very prompt reply, and The President Harding will undoubtedly become one of Burpee's best known varieties. The President Harding is an orange-cerise seedling. Unfortunately the supply of seed is very short so that the company will have to grow the variety another year before they can offer it to the trade.

**The Annual Meeting of the Florists' Hail Association will be held at 2 P. M., August 16th, 1922, at Convention Hall, Kansas City, Mo.**

**JOHN G. ESLER, Secretary**

### ED. J. ROGEAN'S INJURIES

At the last report Ed. J. Rogean, the well known salesman in the Boston Flower Exchange, had not been released from the hospital at Mispec, N. B., where he has been confined for several weeks as a result of an automobile accident. It is expected, however, that he will be sufficiently recovered to return to Boston very soon. It seems that Mr. Rogean was cranking his Ford car, in which he had made the trip to Mispec for a vacation, when the machine suddenly started and threw Mr. Rogean to the ground. The speedometer attachment on the wheel came against his leg in such a way as to make a wound which reached to the bone. Four stitches were required to close the wound, and Mr. Rogean was immediately taken to the local hospital. He has the sympathy of his many friends who hope for his early and complete recovery.

### BOSTON MARKET SITUATION

The announcement may come at any time as to the choice of sites of the new market house in Boston. When the decision is announced it will be definite and work will be taken up at once. The committee in charge of the matter has met with many difficulties owing to the disposition of real estate men to advance prices as soon as they learned that any particular locality was favored. At a recent meeting a secret vote was taken and the sealed ballots turned over to the presidents of the two markets. Each ballot gave the first, second and third choice, and the ultimate decision will be among the three sites which received the largest number of votes.

Vol. XXXVI AUGUST 10, 1922 No. 3

## THE TALK OF THE TRADE

It seems rather surprising to find baskets of everlasting flowers being sold in mid-summer when fresh flowers from the garden are very plentiful and while florists' flowers are cheap. Nevertheless there is a steady demand for these dried blooms. Certain florists seem to have developed this line of trade to a greater degree than others. The Copley Florist on Huntington Ave., Boston, sells thousands of baskets of everlasting flowers in the course of the season, and the trade is not interrupted by the coming of hot weather. Indeed, many tourists who visit Boston buy these flowers, arranged in baskets, as gifts to send home. As a result they are shipped by the Copley Florist to all parts of the country. Mr. David Levinson of this firm is particularly skilful in making up baskets which probably is one reason for the large number sold.

The species most often used is Helichrysum, which comes in many colors . This is a very easy flower to grow and yet it is one in which quality counts for much. Certain colors are desirable while others are almost useless. There is practically no demand for red flowers, as they do not show up well. The colors most liked are shades of bronze, yellow and white. The flowers must be a good size, full and well shaped.

---

It seems rather curious to read a note in an English paper referring to the carnation Maine Sunshine that, while the variety is believed to have originated in America, the writer hasn't the record of the raiser. Of course every greenhouse tyro in this country knows that Maine Sunshine came from Strout's famous range in Biddeford, Me. At the same time it is pleasant to have this carnation warmly praised by the English writer who says:

"At the trial of perpetual-flowering carnations held in the Wisley Gardens in the past winter, this variety attracted such favorable notice from the judges as to be considered worthy of the R. H. S. Award of Merit. The color is soft primrose-yellow slightly deeper in the centre and the flower is of large size and perfect form. High praise is given this variety by Messrs. Allwood Bros., who state in their catalogue, 'To such an extent do we realise the merits of this variety that this is the only pure yellow we are growing

SAMUEL MURRAY
Vice-President of the S. A. F.

at our wholesale cut flower nursery at Clayton.' The plant is very floriferous and the growth very healthy."

---

It is rumored that Iris tingitana is going to be very short this year. If reports are true that very little stock will be available from California, florists are wondering if they are not likely to be shut out entirely. This iris is among those which cannot be imported except for propagation purposes, and the outlook is not very rosy.

---

It still seems difficult to meet the demand for geraniums. Gradually, however, a florist here and there is going into geranium production quite heavily, so that eventually a balance will doubtless be struck. Talking recently with Mr. W. B. Dasha, of North Weymouth, Mass., I learned from him that at least a half of his new house will be given over to the growing of geraniums this year, with the idea of selling cuttings to the trade. Mr. Dasha already has one house devoted wholly to geraniums. This year he will grow fewer carnations than in the past in order to give more attention to geraniums. He says that while some of the newer kinds are very attractive, there is comparatively little call for them. The old Ricard and Poitevine varieties are the kinds which are most in demand.

---

I was interested to find that Mr. Dasha had been whitewashing the glass on one house, using the formula which appeared in a recent issue of Horticulture. He said he had never had as little trouble with the whitewash working off. In fact, it was sticking so hard he was almost beginning to wonder if he would have difficulty in removing it.

Mr. Dasha's experience is one which indicates the opportunities offered by horticulture. For many years he was a shoe salesman on the road, traveling through Pennsylvania. Some years ago he got a small greenhouse where he grew flowers in an amateurish sort of way. Gradually he increased his interests and investment until now he has given up the road entirely and is a full fledged greenhouse man with a modern plant and a bright future.

---

Talking with F. J. Tighe, of the King Construction Co., recently, I was interested in what he had to say about the stock produced by greenhouse men whom he had visited. "Eight or nine years ago," he remarked, "quantity was the object with most florists, so far as I could judge. Now quality is the watchword of almost every reputable grower. This gratifying change has been brought about, doubtless, by

keener competition which has made the poorer stuff hard to dispose of. I have no doubt, too, that the constantly increasing F. T. D. trade has had much to do with the matter."

Mr. Tighe finds that optimism prevails throughout the greenhouse trade, and feels certain that there will be rapid and continuous expansion of the greenhouse business.

---

Mr. Geo. Yavner, the florist of Toronto, Ont., has been attracting much attention by the unique character of his window displays. Recently he staged a dollar window which was very successful. A week or two later he put on a goldfish window, using a tank 5x3½ feet. Even small tanks of goldfish always attract attention, but when a big tank of this kind is put in the window and filled with the bright hued fish, it invariably draws a big crowd. There are many ways of this kind in which florists can help to increase the business in what is ordinarily a dull season.

---

There has been much complaint this year about the crooked stems of gladioli. In some instances a great many flowers have had to be thrown out because of this defect. It is probable that these crooked stems are due to the great amount of rain which came during the growing season. Naturally the Primulinus Hybrids, with their lighter stalks, have suffered most in this respect, but in some of the stronger growing kinds badly twisted stems are seen.

---

While most of the florists have turned to the newer roses, there are still a few who hold to the older varieties. There are some, for example, who are very fond of Lady Alice Stanley, which in truth has many good qualities. In the past they have been getting this rose mostly from Neil E. Boyle, but Mr. Boyle has finally given it up because of its poor keeping qualities. Mr. Boyle is very fond of Columbia, which he grows to perfection, and which is proving to be one of the finest creations of recent years so far as florists are concerned. He has also been successful with Butterfly and White Killarney. Mr. Boyle grows nothing but roses, and has won no little fame by his skill in producing extra good blooms. Just now he is going over his houses and getting them into first class condition for a big business next season.

## GARDENERS' CONVENTION

### Headquarters to be at the Brunswick Hotel, Boston

A meeting of the New England Branch of the National Association of Gardeners and the Convention Committees was held at Horticultural Hall, Boston, on Friday evening, July 28, to complete the plans for the coming

THOMAS ROLAND

Who is to be specially honored at the Kansas City Convention

convention of the association which is to take place in Boston Sept. 12 to 15.

The first two days of the convention will be devoted to business meetings, and the annual banquet, which will be held at the Brunswick Hotel, will be held on the second evening of the convention. The Brunswick will be the headquarters for the delegates, as it offered particularly good terms.

On the third day, the famous North Shore will be visited, the attendants at the convention leaving Horticultural Hall early in the morning in automobiles. The finest gardens in Beverly Farms, Manchester, West Manchester, Prides Crossing, will be inspected. The party will then proceed to Ipswich to become the guests of Mr. and Mrs. R. T. Crane on their extensive estate at Castle Hill Farm, where a real New England Clambake will be served. Later the beautiful gardens of this 2500 acre estate, of which Robert Cameron, the president of the association, is superintendent, and its five mile coast line, and rolling dunes of white sand, will be inspected. A stop will be made at Cedar Acre Gladioli and Dahlia Farm of B. Hammond Tracy on the return to Boston, and other places of historic interest will be passed en route.

On the last day of the convention, the noted Arnold Arboretum with its matchless collection of trees and shrubs, and part of the Boston parkways will be visited. Later the visitors will be taken to Cambridge, where under the shadow of Harvard College the world famed collection of glass flowers in the Agassiz Museum will be seen. Leaving Cambridge, historic Lexington and Concord will be visited, and later the famous Walter and Henry S. Hunnewell estates in Wellesley with their wonderful specimen trees and shrubs.

## W. N. CRAIG RESIGNS

W. N. Craig has resigned as superintendent of Faulkner Farm, Brookline, Mass., a position which he has occupied for the past ten years, and where he has gained a wide reputation. Mr. Craig has purchased a piece of property, including an attractive house and several acres of land, on Front street, in Weymouth, where he will take up his residence after October 1, when his resignation takes effect. At Weymouth he will grow plant material, specializing in hardy subjects and bulbs. Before going to Faulkner Farm Mr. Craig was superintendent of Langwater Farm, North Easton, for fourteen years. He is secretary of the Gardeners' and Florists' Club of Boston, a former president of the National Association of Gardeners, and widely known throughout the country.

---

Joseph E. Koppelman, well known in the trade in Providence, was recently knocked down by an automobile and suffered injury to his right leg

**IRIS AND PEONIES**

Having a large stock of the following Iris will quote special prices for early delivery as I wish to clear the ground:

**Darius, Dr. Bernice, Halfdan, Ingeborg, Loreley, Mme. Chereau, Mithras, Mrs. G. Darwin, Mrs. H. Darwin, Sherwin Wright, Walhalla, Walneriana.**

Ask for price list and see what my customers say about the service they receive. Thank you.

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

# KANSAS CITY CONVENTION

## Everything Ready for the Opening Session Next Tuesday

The Secretary is now in Kansas City, and will remain until after the convention. He should be addressed on all matters pertaining to the Convention, at the Meuhlebach Hotel, where his temporary office is maintained.

Kansas City's florists are practically ready for the opening of the Thirty-Eighth Annual Convention of the Society of American Florists and Ornamental Horticulturists next Tuesday. At a meeting held last week the plans for the elaborate program to be staged were virtually completed.

From all indications received, this is going to be one of the biggest conventions ever held. Hundreds of reservations have been received and a great many are from the women members and associate members of the organization.

The radio invitation, sent through the Kansas City Star to every florist in the United States, was broadcasted for a period of one hour starting at nine o'clock Monday night, August 7. The invitation to the florists this year is more than just a request that the florists attend their own convention. Any individual, regardless of whether he is a florist or not, who is interested in floriculture or horticulture will be welcome.

"As a matter of fact, the more of these individuals who attend, the greater will be the convention," W. L. Rock, Chairman of the local committee, said recently. Mr Rock is an old experienced campaigner in the matter of conventions and floral shows. He has had with him a strong committee, all of whom are vitally interested in the progress of the floral profession. This committee has spent entire days and several nights preparing and drafting and often re-drafting the program in order that it may come up to all expectations.

While in Kansas City the delegate will be given every opportunity not only to hear the latest developments within his own profession, but to hear and see what Kansas City has accomplished in this line within a few short years.

The Convention Bureau of the Chamber of Commerce is uniting with the local florists in this invitation. "We hope we make this the greatest convention any florist has ever attended," W. M. Symon, Publicity Director for the Convention Bureau, said.

### ADDITION TO OFFICIAL PROGRAM

A little function, which should have been noted in the Official Program, is scheduled for the session of the first day, Tuesday afternoon, August 15th. The Indiana State Florists' Association, and the National Flower Show Committee will, at this session, as a token of their appreciation of the interest in the Indianapolis National Flower Show displayed by Thomas Roland, Nahant, Mass., through his wonderful exhibit of Acacias at the Show, assembled there at considerable expense and risk, tender to that gentleman a testimonial which shall at least insure that a record of his splendid devotion to a part of the work of the Society dear to all its members will go down in the annals of the Society, perhaps to stimulate in others the desire to render similar service when occasion requires.

JOHN YOUNG, Sec.

### LADIES' SOCIETY OF AMERICAN FLORISTS

The annual meeting of the L. S. A. F. will be held Wednesday, August 16th, 1922 at 10.30 a. m. in the Meuhlebach Hotel.

The reception to members and members of S. A. F. & O. H. on Wednesday evening, ballroom of Meuhlebach Hotel at 8.30 o'clock.

The Secretary will have an office in the Convention Hall open on Tuesday and one open on Wednesday at the Hotel.

Two amendments to the Constitution will be acted upon at the annual meeting, both having been passed as motions at the meeting in Washington in 1921.

Art. 9, Sec. 2 was voted to read, "Members to be reinstated on payment of $4 back dues, but not entitled to Life Membership until after two years."

Art. 11. The L. S. A. F. shall have one entertainment during the annual meeting restricted to members of the L. S. A. F. and their families and members of the S. A. F. & O. H. Guests of members, except a lady member's escort, admitted by paid ticket only.

Miss M. C. Gunterberg, President, has appointed Mrs. J. J. Hess, Omaha, Neb., as auditor for the year 1922.

MRS. ALBERT M. HERR, Sec.

There was announcement in the official program of the S. O. F. Convention of a meeting of the Board of Directors, American Carnation Society, Thursday, August 17th. This was an error there will be no such meeting.

A Corner in the Handsome Flower Shop of Samuel Murray in the Convention City

**Says Sam: There's three kinds of folks; those who think things couldn't be worse; those who allow that after all things might be a lot worse; and those who roll up their sleeves and say, "Things can be better."**

**The Convention Season** If the days of mythology had not long since departed, doubtless August would be dedicated to the Goddess of Conventions. It is a great convention month, largely perhaps because it is the month when business in most trades lags and when business men are in a mood to travel and see new places. The Canadian Gardeners and Florists are having their convention this week, the 10th and 11th. The National Gladiolus Association meets later in Kalamazoo, and there are various conventions of different flower growing organizations. The big convention of the month, though, is that of the S. A. F. and O. H. at Kansas City. The stage is all set for this convention, which promises to be one of the biggest and best in the history of the society.

Kansas City is famous for its convention facilities and is perfectly aware of that fact. It boasts that it is the best convention city in the country, and has good reason for a boast of this kind. Counting only the big hotels, there is a rooming capacity of seven thousand and over, but with the smaller hotels the total number of rooms available in Kansas City is over ten thousand.

There is a remarkable convention hall, seating thirteen thousand people, and within ten minutes' walk of most of the hotels. The city has a wonderful park system which delegates to the S. A. F. convention will enjoy seeing. Its parks and boulevards include 3,470 acres, and there are forty supervised playgrounds. Cliff Drive, three and a half miles long, is declared by many people (not all of them residents of Kansas City, by any means) to be the most beautiful in America.

Delegates to this convention will go for the purpose of transacting important business, and it will be a business convention from start to finish. At the same time the delegates will undoubtedly embrace an unusual opportunity to inspect a wonderful region in the heart of America.

**City Rose Gardens** Mayor Curley has squashed the plan for a rose garden at the Arnold Arboretum, at least so far as the city is concerned. This is a pity. The proposed rose garden, as planned by Prof. C. S. Sargent, was to contain all the species, together with their hybrids, arranged in groups and families in a way that would have been of greatest scientific value. The rose garden as planned would have been the most complete and remarkable garden of the kind in the world, and would have attracted visitors from every part of the globe. Moreover, it would have given Boston an exceedingly high standing among horticulturists everywhere. It is to be hoped that this project will still be carried out through the generosity of some wealthy man who would like to see his name perpetuated by having it attached to a garden of this nature.

Apparently the far reaching and horticultural importance of such a garden did not appeal to the mayor. His talk with Prof. Sargent gave him an inspiration, however, and he now announces that he is going to build a $100,000 flower garden in Franklin Park, a large section of which will be given over to roses. What he proposes is a spectacular garden which shall win the plaudits of the multitude. The garden he intends to build (and work is to be commenced promptly), will contain a pond for aquatic plants, and will have its border planted with perennials. The rose garden is to contain all the best of the popular kinds of bush roses, and also great numbers of climbing roses trained on trellises. It is to be several feet lower at the center than at the sides to give a better general survey.

There is much to be commended about the idea of municipal flower gardens, and especially municipal rose gardens, although in this particular instance it is a pity to have what promised to be a great botanical and horticultural achievement side-tracked for a mere superficial show. From the point of view of the nurserymen and of all engaged in the horticultural trade, such gardens are of inestimable value. They tend to encourage the buying of flowers and plants, and especially of roses, because the display awakens thoughts and aspirations lying dormant in many hearts. It requires only a little stimulation to arouse the average man to the planting of flowers and shrubs.

Judging from the number of municipal rose gardens now existing or being constructed, or which have been projected, the time will soon come when no large city will be without an official garden of roses. This is well. It means much to those who must perforce remain among the city cliff dwellers, and as much more to the suburbanite and other owners of small places who will seek these gardens for suggestions and advice.

## EDITORIAL NOTES

There are many ways of spreading a love of flowers among the people. Some of the seedsmen especially have been very active in leading the way. The Vicks, the Hendersons, the Burpees, the Brecks, the Dreers, and countless others too numerous to mention have been blazing the path to flower joys for generations. And they have done great work at no cost to the people of these United States. Which is more than can be said for Washington.

A writer in the Boston Herald recently made a vigorous protest against the gathering of wild Lupine. He asserted that a certain florist of South Sudbury, Mass., is sending his men into the fields to gather all the Lupines that can be found, the flowers being sent to Boston for sale. He believes that this practice ought to be stopped by law. The florists are having a hard time these days, between the reformers and the bug hunters.

# American Gladiolus Society

## Program for the Convention to be Held in Kalazamoo, Mich., August 16-17

When Mr. David Tyndall, of Brockton, Mass., Secretary of the American Gladiolus Society, goes to Kalamazoo to attend the Annual Convention, Aug. 16 and 17, he will have a very interesting report to make. During his term as secretary he has labored very hard to increase the membership. Over 375 new names have been put on the list during the past year. The total membership is now 650. Mr. Tyndall started out with the hopes of bringing the total up to 1,000, and sees no reason why that goal should not be reached in the next few months if he has the hearty co-operation of the other members.

The American Gladiolus Society is now much more active than it has been for some years, and is in a position to be of the greatest benefit to the gladiolus growing industry.

The Convention will be held in Knights of Pythias Temple, opening at 3 o'clock Wednesday afternoon, August 16. The program for the Convention will be as follows:

Address of the President, C. R. Hinkle, St. Joseph, Mich.

Report of the Secretary, David Tyndale, Brockton, Mass.

Report of the Treasurer, Madison Cooper, Calcium, N. Y.

Reports of Committees.

Discussion and Suggestions for the Benefit of the Executive Committee in settling the next meeting place.

Action on a Revision of the Constitution and By-Laws.

Unfinished Business.

Adjournment.

On the second day of the Convention the delegates will be given an automobile ride around the city of Kalamazoo.

Hotel reservations may be obtained by writing Allan C. Frink, Kalamazoo, Mich.

The exhibition in connection with the Convention promises to be an excellent one, many additional prizes having been offered by concerns in Kalamazoo, as well as by diverse growers in other sections.

Schedules may be obtained from the Secretary, Mr. Tyndall.

### PLANTING PEONIES

More and more nurserymen are beginning to realize that it pays to give plain, commonsense cultural directions in their catalogues. It is well also to be frank in whatever literature is sent to customers. In his fall catalogue George N. Smith, of Wellesley Mills, Mass., states some simple facts which cover the ground unusually well. I think if something of this sort were sent to amateurs with all shipments, it would be a great help. It may be interesting to read a part of Mr. Smith's instructions. I like particularly the way in which he explains why it is necessary not to cut too much foliage.

"Peonies may be planted in the fall any time after the first of September until the ground freezes, or early in the spring, although the best time is during September and October, since they then have time to form new roots and get a good hold of the soil before winter.

"Peonies when transplanted do not fully recover and produce typical flowers until the second or third year.

"If large flowers are wanted, pick off all but the central bud on each stem; before and during the flowering season be sure that they have an abundance of water. If the flowers are cut before they are opened and put in water in the house, they will be larger and brighter colored and keep longer than if allowed to open in the sun. Make a new cut on the stem and give fresh water every day.

"When cutting flowers, especially from young plants, do not cut too near the ground, but leave as much foliage as possible, because the leaves are necessary for root growth. The leaves gather certain gases from the air, while the roots take up plant food from the soil in the form of salts, and the assimilating is done by leaves. Leaves are as necessary to plant life as lungs are to animal life."

**Superior quality, effectively sterilized, always dependable. The florists' standard for over fifteen years.**

**Chicago, Ill.**

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

When Dr. Huey lectured in Boston a few weeks ago he spoke of the difficulties to be found in growing roses when there are large trees near the bed. Other rose growers have wondered how he met such a situation, because he advocated planting roses where they would be protected from high winds by trees or buildings. It seems that Dr. Huey surrounds his beds on the sides near the trees with 12-inch hemlock boards. Two of these boards are set on end, one above the other, along the beds and just below the surface. It is impossible, of course, for the tree roots to penetrate such a barrier.

One prominent grower in Philadelphia, a man with plenty of means, has adopted a somewhat similar plan, except that he uses concrete walls set deeply into the ground around all of his rose beds. Some people believe that roses should be planted in the most open location available, but Dr. Huey finds a little shade, especially in the middle of the day, a great advantage as it gives better color to the blossoms.

If roses are to be set out in the spring, it is an excellent plan to make the bed this fall, so that it will have plenty of opportunity to settle. While roses will grow in many kinds of soil, although preferring a rather heavy clay loam, they must have good drainage. This is one fact to be emphasized, because roses abhor wet feet and will not last long if water stands around the roots.

While roses will thrive fairly well in average soil, without special preparation, at least for a few years, a permanent bed ought to be made with a good heavy layer of cow manure at the bottom. In no other way can so fine and extended a show be made. If the bed is made in sod land, the sods can be chopped up and thrown back. They will provide humus as they decay. While the bed should be a few inches higher than the surrounding ground at first, it should never be kept mounded up. It will naturally settle until it is level and no harm will be done if it is a trifle lower than the ground around it.

Dr. Huey has a special rake which he likes to use among his roses. It is made by cutting down an ordinary rake with a hack saw so that it is only five inches wide. With such a rake it is possible to get close to the base of the plants without doing any damage.

As has often been pointed out, the time to water roses is early in the morning. If this work is done late in the afternoon or in the evening, the early appearance of mildew can be confidently expected.

Mention has been made before of the system perfected by Prof. J. K. Shaw of the State Agricultural College at Amherst, Mass., by means of which different varieties of apples can be distinguished by their leaf characteristics. The College has now issued a bulletin which describes the method in detail and pictures the leaves of most leading varieties. The bulletin is No. 208 and I am sure those who grow fruit will be much interested in what it offers.

A Well Grown Specimen of Taxus Cuspidata, the Japanese Yew

## JAPANESE YEWS FOR HEDGES

### Other Purposes for Which They May be Used

No better hedge plants have been introduced than the Japanese yews. It is true that they have been too expensive in the past to be used very extensively for hedges, but as they become more widely disseminated and lower in price they are bound to be planted widely. One remarkably good example of the use of Japanese yew in this way is to be found on the Bayard Thayer estate in Lancaster. There is a large and well established hedge there which is greatly admired by everyone who sees it. Bobbink & Atkins, of Rutherford, N. J., have recognized the value of this yew, apparently, for they are giving it special attention, and are speaking of it as "The Hedge Plant of the Future and the Evergreen for Everywhere."

There are some very good specimens of Taxus cuspidata in the Arnold Arboretum, which testify to the hardiness of this yew, and to the grace and beauty of the plants. It is not generally realized, however, that these plants adapt themselves remarkably well to all kinds of conditions. They are at home in the formal garden, but just as attractive in informal plantings. For preference they should have a sunny and rather exposed place. Apparently no winter's cold ever changes the deep green of the foliage. The bright red berries of these yews are very effective and attract the birds.

Taxus cuspidata capitata is used for hedge planting, while T. brevifolia, T. baccata repandens and T. baccata tardiva are used for foundations, and dwarf planting effects. T. baccata repandens, however, is excellent for making fairly low hedges, seldom growing more than four or five feet high when mature. Bobbink & Atkins consider this the king among the dwarf yews and doubtless they are correct in giving it this position.

## KAULBACH'S NEW STORE

Kaulbach, the well known florist of Haverhill, Mass., opened a fine new store at 42 Main st., August 1. The new store is handsomely decorated and has a large work room and basement built-in refrigerator. Many neighboring florists have visited the store to congratulate Mr. Kaulbach on his enterprise and success.

# Mansfield Gladiolus Growers

## Methods Followed in the Gladiolus Center of New England

Mansfield, Mass., is winning a wide reputation for its gladioli. There are few sections where gladioli are grown commercially in such an extensive way. There are so many growers in this town that they have an annual exhibition of their own, and one which rivals the Boston Show. The industry has been established here for about eight years. Mr. Zeestraten, now in East Bridgewater, played a large part in arousing the interest of the Mansfield people in the gladiolus, and sold them a great many bulbs.

Frank O. and F. F. Shepardson were among the pioneers, and are now among the largest growers, having about three acres. They ship their flowers to the Boston Market, where they are sold by Arthur Carr. They were among the first to market Lily White this season, and sent in some remarkably fine spikes about the middle of July.

The only grower having a larger acreage is Robert Walker, secretary of the local association, who has three and a half acres. Mr. Walker has done much to build up the industry in Mansfield, and is an enthusiastic grower.

W. S. Harris sells a great number of flowers and bulbs by the roadside, having erected a commodious salesroom which he has christened "The White House." Mr. Harris is famous for the number of varieties which he grows, having at least 250 different kinds. Another very active man among the Mansfield growers is Willis Chase. While a resident of Mansfield, his gardens are in Foxboro, rather a fortunate matter for him, as it happens, because Foxboro is not included in the quarantine ban which has been put upon Mansfield. The corn borer has been found in Mansfield, so that no flowers can be shipped or carried outside of the quarantined area. As this area includes Boston, however, and most of its suburbs, the trade is not interfered with seriously, except in the matter of automobile parties.

Among the other growers in the Mansfield section are Miss Jane Bushnell, Mrs. Elsie Tragardt, Fred Reed and John Conrod, all of whom are accumulating nice collections and doing a good business. It is customary in the Mansfield section to grow gladioli in rows, three feet apart, and to have two or three bulbs abreast in the row. With fancy varieties only two are used. The growers as a rule are not especially careful about having their bulbs exactly the same distance apart because labor is an important consideration. They crowd the bulbs pretty hard in order to get as many as possible in a limited area. Fairly deep planting is practiced in order that plants may stand up well. The growers often talk about getting their bulbs in six inches deep. As a matter of fact there are few that really plant more than four inches deep. In some cases planting is more shallow than this because the fact is generally recognized that there is a greater increase when the bulbs are fairly near the surface where the ground is warm.

## URGE BETTER INSPECTION

### Pacific Coast Nurserymen also Against Misleading Advertisements

Mr. Benj. Chase, of Derry, N. H., the well known manufacturer of nurserymen's labels, recently returned from his annual trip across the continent. Mr. Chase attended the convention of the Pacific Coast Association of Nurserymen, and reports that this Convention was of unusual interest in several ways. The retiring President, Howard Evarts Weed, of Beaverton, Wash., said that American nurserymen are now producing a quality of ornamental shrubs and plants superior to those imported from foreign countries before the war. He further declared that, while the Pacific coast nurserymen were behind the eastern men in ornamental plant production, they were ahead in fruit growing.

Nurserymen from various parts of

the Pacific coast reported that business in ornamental fruit tres, shrubs and plants has been very good in the past year. For the coming year the fruit-tree stock is big, but the supply of ornamentals is short.

The Convention passed resolutions asking for a stricter control over nursery stock growing, selling and shipping, to prevent the spread of destructive pests. It was said that the spread of these pests was due largely to the promiscuous distribution of infected nursery stock by irresponsible persons. There were arguments in favor of uniform horticultural laws for all the states, based on the inspection of nursery stock at the point of shipment.

Extravagant and misleading advertising by nurserymen was condemned by the organization. The statement, "Wholesale Prices to Planters," often used in advertisements was declared as being far from the truth, and one, therefore, that should never be used by reputable nurserymen.

During the Convention the delegates were entertained at the famous Steele Pansy Gardens, the Mountain View Rose Garden and the Portland Wholesale Nursery, where they found much of interest.

Charles T. Hawkes, of Caldwell, Idaho, was elected president, and it was voted to hold the next Convention at Boise, Idaho.

## SNAPDRAGON RUST

Snapdragon Rust (Puccinia antirrhini) is apparently an American disease, having been first found in California in 1895, says J. G. Sanders, director of the Pennsylvania Bureau of Plant Industry. Since that time it has spread all over the United States by means of infected snapdragon plants shipped from place to place.

In the past, spraying with Bordeaux mixture or ammoniacal copper carbonate has been recommended to hold the disease in check, but experimental work done by Prof. Geo. L. Peltier of the Illinois Agricultural Experiment Station, and reported in Bulletin No. 221 of that station, proves that the benefits derived from spraying are not sufficient to justify the expense.

The disease attacks all portions of the plants, leaves, branches, stems, and even the seed pods, and all varieties are equally susceptible.

To prevent its spreading among plants already in the greenhouse do not syringe the plants. The spores are carried from plant to plant in this manner, and also it creates conditions favorable to the germination of spores. When watering be very careful not to wet the foliage, simply water the earth.

The disease is not carried over on the seed. This affords a method of avoiding trouble. Remove the soil from the greenhouse benches that has grown infected plants, replacing it with soil which has not grown snapdragons for one year or longer. In growing the seedlings be very careful to avoid the use of infected soil. By this manner only can trouble be avoided.

Having produced seedling stock the desirable varieties can be selected and propagated by cuttings. Be very careful not to use infected cuttings, because even a very few cuttings in a cutting bench can cause the loss of the entire bench full of cuttings, the grower laying the trouble to "damping off."

Keep the plants clean, and the houses in which they are growing well ventilated. Should the rust show up among the plants such plants should be burned immediately. With these precautions, and the growing of seedlings on clean soil, a reasonably clean and profitable crop can be given, but it will be at the price of eternal vigilance.

We suggest writing to the Director of the Agricultural Experiment Station, Urbana, Illnois, for the bulletin mentioned.

We will be glad to meet you personally at the Convention in Kansas City; but if we should fail to get together, or if you are not there, better attend to this little matter right now, and mail us your order for:—

**SWEET PEA SEED**

During the past season we have made a special study of Sweet Peas and have selected varieties best for the commercial grower that the market affords, and we have every reason to believe that our seed is as true to name, color and type as any offered.

WHITES

**Early Lankey, Bridal Veil, White Orchid, Venus, Mrs. Spanolin,** oz., 75c; ¼ lb., $2.50; lb., $8.50.

**Snowstorm,** oz., $1.00; ¼ lb., $3.00; lb., $10.00.

PINKS

**Early Helen Lewis, Rising Sun, Miss Louise Gude, Mrs. Skaach, Miss Fabing, Loveliness, Daybreak, Yarrawa, Hercules, Enchantress, Rosebud, Splendor,** oz. 75c; ¼ lb., $2.50; lb., $8.50.

**Early Gem, Sunburst, Rose Queen, Empress, Pink Beauty,** oz., $1.00; ¼ lb., $3.00; lb., $10.00.

SALMON and ORANGE

**Glitters, Dazzler, Orange Beauty,** oz., 75c; ¼ lb., $2.50; lb., $8.50.

CERISE and CRIMSON

**Cherry Ripe, Early King,** oz., 75c; ¼ lb., $2.50; lb., $8.50.

**Fire King, Illumination,** oz., $1.00; ¼ lb., $3.00; lb., $10.00.

BLUE and LAVENDER

**Lavender King, Wedgewood Blue, Blue Bird,** oz., 75c; ¼ lb., $2.50; lb., $8.50.

**Columbia,** oz., $1.00; ¼ lb., $3.00; lb., $10.00.

Also some choice novelties; such as MRS. HERR and WHITE STAR at $2.50 an oz.; MRS. HARDING at $3.00; and the big and wonderful winter flowering cerise or pink, CHEERFUL, at $5.00 oz.

# ADVERTISING AND SELLING

When business is dull shall florists sit back and bemoan their hard luck or shall they seek for means to draw into their stores the trade that would otherwise pass by? The average florist is inclined to shrug his shoulders and spend the time playing pinochle which might better be devoted to thinking out new selling schemes. This is an excellent time to place price cards on the goods in the window. There are many florists who do not like to advertise a drop in prices in the newspapers. They have a feeling that it is difficult to get them back again once they are down. Whether this is true or not, there can be little argument against selling flowers somewhat under the usual prices during the summer months, and putting a label on them which will call that fact to the public's attention. There are instances where filling the window with offerings of different kinds, and tagging them, has increased trade to a surprising extent. This is especially true, of course, in down town districts, where a considerable transient business is done.

Another way to draw trade is to mail nicely printed cards to a list of customers, telling these customers that a special offering is being made to them for the month, that while flowers are not being advertised as reduced in price because they are not over plentiful, yet regular customers are being allowed a very sharp discount from prices ordinarily quoted. This simple plan will often bring in a great many people who appreciate the attention and other people who cannot resist the lure of the bargain, whatever its form. We know of one florist who is careful to have an advertisement at the foot of the column of marriage intentions published by one paper in his community. He takes it for granted that the young people in the town make a point of reading this column.

Many florists in small towns seem to think that they are handicapped by the lack of an immediate market, so that they can never expect to do a large business. It is different with George E. Newell, who is located at Houlton, Me. Houlton is a small place and, accordingly Mr. Newell has developed a business which takes in the entire county. The nearest town of any size is Presque Isle, fifty miles away and with 5,000 inhabitants. The smaller towns between have neither stores nor greenhouses. Mr. Newell attempts to reach all this territory by means of circulars, telephone and a traveling salesman. Advertisements in the local papers introduce the salesman, who has long been traveling through that territory selling nursery stock.

Here is a hint for other small town florists. In almost every part of the country there are nursery salesman who are well known and who probably would be glad to act as a florist's representative.

# CHEERFUL

## Burpee's New Winter Flowering Sweet Pea

This fine novelty is an entirely new shade among the Early or Winter Flowering Sweet Peas. It is most appropriately named, the color being a "cheerful" soft shade of Begonia-rose. The color is pure throughout with no other tints. Few varieties make such an imposing bunch as this great gem. The flowers combine immense size with good form. The standard is broad and well waved. The wings are also much frilled, and in size of the right proportion to the magnificent spreading standard. The whole flower is all that could be desired.

**Cheerful** is good under all conditions and lightens up to a most attractive brightness under artificial light. The substance of the flowers is thick and heavy, adding greatly to the keeping value after being cut. They are well placed in fours on long stout stems.

**Cheerful** is a good grower and bears a large crop of giant flowers on strong and healthy vines. The foliage is a rich deep green. Not only are the individual flower spikes most artistic but they make up into a delightful bunch.

**Cheerful** was awarded a Certificate of Merit at the great International Flower Show, New York, 1921.

The illustration was engraved from a life-size photograph taken on Burpee's Fordhook Farms.

**Cheerful**
Burpee's New Sweet Pea. A rich shade of rose.

**Trade packet $1.00; oz. $5.00; ¼ lb. $15.00; lb. $50.00**

# RIBBONS and BASKETS

Our representatives are now calling on the flower trade with a superb line of Fancy Baskets in all shapes and sizes made especially to our order and representing the latest color ideas and most up-to-date patterns. Also the same in Exclusive Ribbons and other florists' supplies. This is a good time to make your arrangements for the new season now approaching. Drop us a line and our representative will call.

☞ Those attending the Convention at Kansas City are cordially invited to inspect our exhibit there, and get an idea of the line of goods we handle. Our representative will be glad to see you.

EXCLUSIVE FLORISTS' RIBBONS AND SUPPLIES

## MORSE AND BEALS' NEW STORE.

Morse & Beals, of Lowell, have just finished moving into a new store a few doors from their former location. The new store is not only larger than the old one, but is more convenient and lends itself better to decoration. It is finished in white, has large show windows, and commands the attention of all who pass through the square. A cold storage system has been installed, with a chest 15x15 feet, as well as a commodious show case. Morse and Beals are very fortunate in the fact that they were able to connect up with a brine system from a market next door. This is an economical arrangement and satisfactory in every way, as no ammonia is used in the system.

## BOSTON

Caplan, the florist, is now nicely installed in his new store on Massachusetts Ave. One window is filled with flowers, largely gladioli, while the other is devoted to birds and goldfish.

It is announced that $118,000 has been paid in towards the building fund for the new flower market. It is expected that no difficulty will be found in collecting the $150,000 desired.

Mr. Joseph Margolis, of the Henry M. Robinson Co., is back at work after his pleasant vacation in Maine, and is looking very fit.

Ernest Wollrath of Waltham is taking his vacation in the form of an automobile trip through the New England states.

Henry Penn has gone to Belgrade Lakes, Maine, for an extended vacation. He is expected to return with some new and up-to-date fish stories.

As usual Henry M. Robinson is taking the month of August for his play time. With his family, including his sons, Charles and Henry, he is enjoying his new summer home at Green Harbor.

Gostave Thommen, correspondent of the Florists' Exchange, is back from a trip to Florida. He had a wonderful time, according to all reports, and had his picture taken in a crocodile's den. There can be no question about that fact, because he produces the picture to prove his statement.

It is understood that the Flower Exchange will have an outing at Nantasket the latter part of this month.

# DREER'S CONVENTION DISPLAY

As usual, for many years past, our exhibit at the KANSAS CITY CONVENTION will consist of a comprehensive display of seasonable plants, such as Palms, Ferns, Crotons, Ficus and other Decorative and Foliage Plants in commercial sizes.

We especially call attention to our stock of

**MADE-UP KENTIAS**

of which we will have a particularly good line in all sizes and good values.

Our representatives, Messrs. Karins and Goudy, will be in attendance at the Convention and will be pleased to give detailed information on the above as well as on all other horticultural subjects handled by us, but not practical to exhibit at this season of the year.

**HENRY A. DREER** 714-716 CHESTNUT ST. PHILADELPHIA, PA.

## NEW KING HOUSES

The attached list of recent buyers of King Greenhouses show, I believe, that the florists are not only talking but they mean business and that they are going after it stronger than ever before. They are preparing for it, in many instances, by doubling their ranges.

Mrs. Bernard Farley is to establish a flower business at her home on Grand View Hill, near Lake Placid, N. Y.

# HEATING

BRUNSWICK-KROESCHELL boilers are making the most wonderful greenhouse heating record in the world. Florists who have used other makes are constantly giving the BRUNSWICK-KROESCHELL the highest praise. 13,468,320 sq. ft. of glass was equipped with BRUNSWICK-KROESCHELL Boilers during the past five years.

**Brunswick-Kroeschell Co.**
**466 W. Erie St.**
**CHICAGO**

## George Watson's Corner

"You in your small corner and me in mine."

Henry E. Michell writes from London to his elder brother Fred, July 18th, reporting all well with himself and family. They had a fine voyage across the Atlantic, the weather being ideal and the steamer so big and speedy that there was no seasickness. He expects to start for Holland and Belgium on July 21st.

What is the difference between Centaurea moschaba, the sweet sultan of commerce, and the imperial sweet sultan, which has appeared recently in the flower market. Most of the boys gaze on it with wonder and say, rats, that's no sweet sultan, that's a Scots thistle. The trouble with that idea is: they can find no horns on it. If it's a Scots thistle there ought to be stingers. But no, the leaves are plain and smooth and thin with no stingers, which cuts it out of the thistle family. My friend Jimmy Anderson, whom I run across at Dooners once in a while, said, sure, it's a thistle. He's a head man in Lits, and he was born just south of the Grampians. Can you beat it? Can you blame the Battles boys or the Pennock boys for getting fooled when "My name is Norval on the Grampian Hills" (Anderson) gets fooled!

That fringed rose like a little carnation—M. R. Case talks about in the last issue must be quite an interesting gem. If she will mail us a few buds we will show them to all the boys in the flower market here.

The Craig place at Norwood looked particularly well on the occasion of our last visit (August 1st). Everything is in the pink of condition and worth going a long way to see. In palms they still make a great specialty of Areca lutescens and have a big array of them—forty or fifty thousand—in all sizes. Phoenix Roeblini is another palm which is a specialty here, and extra well finished. Pandanas Veitchi is looking well—clean, shining, perfect, and in great quantity. In ferns perhaps the biggest favorite is Teddy Junior although Scotti still holds a strong hold on public favor. The four-inch pots here hold a plant as big as can be got elsewhere in a six-inch pot. This pleases buyers at a distance, as there is a great saving in expressage. Cyclamen, Crotons Dracenas are also there in all their glory, besides many other fine subjects too numerous to mention in this hasty sketch.

Golden Ophelia does not seem to be earning high opinions among our English cousins. According to Gardening Illustrated this variety is inferior both in color and stamina, and does not come up to high claims made for it when introduced to the rose loving public. Evidently the experts reporting on these new roses have not yet got acquainted with Souvenir Claudius Pernet which, according to experts on this side, is the very best yellow that has been introduced up to the present time.

We cannot be sure of things as they are, for instance:—"Pardon me, have you read Ivanhoe." "No, these Russian novels bore me." That might have happened; but this one, I have my doots aboot:—"Old lady to boy dressed in kilts:—'Fechtin again, ye bad laddie.' 'Aye, an I'll be at him again if he says I wear a kilt just because my feet are too big to get into my troosers.'" George Edmundson, of Dreer's, used to be a great boatman, now it's a "Chevrolet." What happened to him? Did he get to be a Bolshevist? Then, there's Jim Thoirs, of Camden. He used to go fishing with me at Grassy Sound. But now, it's a "Livingston." Wants me to go riding with him. You never can tell! Big Feet! What do you know about that? I have heard about successful men getting the big head but this is the first hint that their brains run all the way down to their feet. Where is the human brain located anyhow? I have often wondered. Have you ever had lumbago in the small of the back? But Jim's a careful driver. I've already tried George. Once was enough!

And now boys Ho for the wild and woolly West! What's the matter with Kansas for a week! We ought to have a breezy time! Ask William Allen White! He is the lad to stir things up—if old Boreas goes to sleep.

The word "Gerontocracy" is not in the dictionary; but I would never think of calling a smart up-to-the-minute scientific man an "old fogy." The O. H. S. is an Amateur Society but covers all classes of people. There should be a good sprinkling of the best, as officials, from all ranks—according to their ability and usefulness.

David Rush sympathizes with my growl about meticulous and other funny words but at the same time has the nerve to resurrect an old villain. He says:

In 1853 a writer in the Florist and Horticulturist Journal was complaining that The Pennsylvania Horticultural Society had too many scientific men as officers, and also as members of its principal committees, he said:

Such a Society should not be ruled by Gerontocracy.

"Ed note:—We believe in plain English this means old Fogyism."

The John C. Meyer Thread Co. were the first to introduce the Meyer green Florists' threads that would not fade or change color for Florists' use. Ask any of the wholesale Florists or growers about the Meyer green Florists' thread and they will tell you it is the best. It will go twice as far as ordinary thread and the Florist can do better work with it. Write for prices and samples and we will see that you get the best thread in the world.

## COMING GLADIOLUS SHOW

The Gladiolus Show to be held in Horticultural Hall, Boston, Saturday and Sunday promises to be one of the largest shows of the season. A great number of entries have been received, and this show always attracts many people. The annual convention of the New England Gladiolus Society will be held at the same time, which means that many delegates will be in the city from various parts of New England.

## NEW ENGLAND NOTES

Mr. J. J. Maloney, who has purchased the retail flower store of J. J. McManmon at 20 Prescott st., Lowell, is making many changes in the interior of the store. He has a well arranged and very attractive looking flower shop. He reports a good business since taking over the store, and has one distinct advantage in the fact that his flowers come largely from the McManmon greenhouse.

Roy C. Peavey and Jas. C. Thompson have opened their new store in Gloucester. It is called the Flower Shop, and is situated at 53 Main street. At the opening each visitor was presented a carnation. Mr. Peavey will be manager of the store.

Joseph D. Fitts, for many years superintendent of parks in Providence, R. I., died recently at the age of 72. He was widely known among nurserymen and landscape architects.

# King
# GREENHOUSES

¶The business man who gets the most for his money bases his judgment of an article not only on the purchase price but on what that article will save and produce for him over a period of ten to twenty years. That is why the growers who buy a King greenhouse forget about the purchase price. They know that it is no more than the price of an ordinary house and that it will be more than offset by the low cost of maintenance and operation and by extra long life.

¶The growers know also that King greenhouses pay a larger margin of profit on the investment by growing more and better flowers than can be grown in the ordinary house of the same size. The scientific design and construction that lets in all the sunlight is the reason.

¶It will pay you to get the facts about King Greenhouses before deciding on your next house.

*"When you think of good greenhouses, think of KING"*

THE 50 x 150 FOOT HOUSE, FOR WHICH WE FURNISHED MATERIALS FOR MR. JOSEPH NEUS

# Where Joseph Neus Found We Stood When We Took A Stand

Joseph Neus lives at Blue Point, L. I., the so-called "carnation center."

In the spring of 1920, he dropped into our New York Office with a mutual friend, who was an old customer of ours.

Mr. Neus wanted a figure on the materials for an Iron Frame house 50 x 150 feet.

In comparing our figures with others, he found they were not the lowest.

But when he carefully compared our houses, and equally carefully considered our reputation for *sound practice* and *pleasant dealing*, he gave us the order.

Evidently, he found both our house and our dealings lived up to their reputation; as this year he gave us an order for materials for a 150 foot addition.

Mr. Neus has told his friends that the price he paid for his house, was the price we first asked for it. That our *first price* was also our *last one*. He seems to have felt that it was some satisfaction to know that anyone should get the material at the *same price*, but that no one could get them *for less*.

We are not out to get all business there is to be had, on a pure price basis.

For over sixty years we have found that there is always a large number of growers who like our steady, solid as a rock way of doing business, and want our houses.

What others pay for their houses, doesn't seem to be all there is to it, for them.

They have satisfied themselves that every dollar they pay us, brings back its full dollar's worth.

One of our oldest customers summed it up years ago, when he said: "I always can depend on depending on Hitchings."

If you are considering a dependable house built by a firm and for a price, you can depend on; then let's have a talk together.

You know we go anywhere for business. Or to talk business.

NOT OPEN SUNDAYS WEST NEWBURY, MASS.

### NEW ENGLAND

James H. Clark, the well known florist of Manchester, N. H., has moved to a new location at 85 Hanover St., in the Odd Fellows' Building. The new store, which is opposite the Palace Theatre, is more centrally located than the former store, being in the heart of the business district. It is very commodious and has been attractively fitted up. Mr. Clark's opening recently was a very pleasant event.

Campbell's Florist Shop at Lawrence, Mass., was entered one night recently and the cash register opened. As no money had been left in the register, however, the thieves got nothing.

The New England Farm and Garden Association has outgrown its quarters at 4 Joy St., Boston, and it is now opening an attractive shop at 657 Boylston St. Mrs. Geo. U. Crocker is the president.

### GARDENERS' CONVENTION

#### Plans Practically Completed for the Meetings to be Held in Boston

Plans are almost completed for the Convention of the National Association of Gardeners to be held in Boston, September 12-15. On the first day there will be addresses by Mayor Curley of Boston, Commissioner A. W. Gilbert of the State Department of Agriculture, A. C. Burrage, president of the Massachusetts Horticultural Society, and Miss Marian Roby Case, of the Garden Club of America.

The second day will be given up wholly to business until evening when the banquet will be held at the Hotel Brunswick at 6.30. On the third day there will be an automobile tour of the North Shore, many prominent gardens being visited, and on the fourth day a visit to the Arnold Arboretum, the glass flowers in Cambridge and the Hunnewell gardens in Wellesley.

### BEVERLY FLOWER SHOW

There was a big exhibit of dahlias and gladioli at the Field Day of the United Shoe Athletic Association, Beverly, Mass., last Saturday. Thomas Leavitt carried off the honors for dahlias, S. B. Crombie for gladioli and Ralph W. Ward for garden flowers. Southworth Bros. had a big display of flowers and shrubs.

## THE TALK OF THE TRADE

As the growing of tuberoses is usually associated with South Carolina and Texas, it is a surprise to many people to find that they are being grown commercially in Pennsylvania, and with excellent success. Thomas Bell, at Brierdyke Flower Farm, Morrisville, Bucks Co., grows each year about 22,000 bulbs. In addition Mr. Bell is growing as many more bulbs in Delaware in an effort to learn, for a farmer in that section, whether they will grow equally well there.

It is a fact that tuberoses are very particular in regard to soil. In many places where they have been tried they are an absolute failure. Mr. Bell grows them in a rich bottom land which seems to be well adapted to their requirements. The sets are planted in May, as it is important to get them into the ground early, for otherwise they will not flower before frost. A well grown bulb will make a good flower and also three large offset bulbs which will bloom the next year. In addition it will produce a number of sets from which bulbs can be grown that will flower in three years. It will be seen, therefore, that the rate of increase is very rapid.

According to Mr. Bell it is not at all difficult to handle the bulbs successfully where the soil is suitable, provided they are kept at a proper temperature during the winter. That is one important point. If the temperature drops below 45 degrees in the storage cellar, the flower buds will be destroyed. The bulbs themselves, however, will show no sign of injury, and will make a fine growth of foliage next summer. Many people who do not understand this point are puzzled because they get no flowers.

Although the demand for tuberoses is not as great as it used to be, large quantities are still used in many parts of the country.

---

The latest returns from the bulb growers show that California Freesias are going to be very short. A heavy planting was made, but the January frost damaged the crop, causing a big loss. It is understood that the crop of large sized bulbs, running up to one inch, is less than one-third of what was expected. These, of course, are the bulbs which go mostly to the private trade, being handled by jobbers. Many florists like the next sized bulbs, which run up to three quarters of an inch. There is a shortage in this line, too, although it will not be so pronounced as in the larger bulbs. The commercial florists' size, running from one-half to five-eighths inch, is in greater supply so far as dealers are concerned, but there is no surplus in California to draw upon. Some small er bulbs remain on the growers' hand and are being offered to those who are willing to experiment with them.

**Irwin Berterman**
Newly Elected President of the S. A. F.

---

Much the same story comes from France as regards Paper-white Narcissi. F. Rynveld & Son, of New York City, got the first shipment in July, but the bulbs have come in very slowly ever since. It is understood that the price will be almost twice that of last year. Orders were given without any price being stipulated. There has been a feeling that the American trade would not pay any exorbitant figures, but the indications now are that all the Paper-whites offered will be taken.

---

Holland sends rather pessimistic reports to swell the total. It isn't so much a case of short crop there, however, as with delay in maturing stocks. It is a serious matter, but means that the bulbs will come in several weeks later than usual. It is expected that some of the prepared hyacinths and daffodils will be shipped before the end of August.

---

Bermuda is again becoming an important factor in the production of Lilium Harrisi and has a good crop this season. Prices for bulbs sold under contract are about the same as prevailed a year ago. Somewhat higher prices are expected on Lilium formosum from Japan.

---

Mr. Charles Beasley, of Milton, Mass., who sells a great number of gladioli at a roadside stand, says that it is impossible to make up any list of flowers as to color or form which the public prefers. He has a large field filled with blooms of many kinds to which the visitors have access if they are not satisfied with what is offered at the booth, and he finds that tastes cover practically everything he grows. While the lighter colors are generally considered the most acceptable, there are some buyers who are exceedingly enthusiastic over the very dark kinds, and buy them freely.

---

Robinhood, a giant Primulinus Hybrid, which attracted much attention at the flower show in Boston, greatly interested Mr. C. F. Fairbanks, of Lexington, and it is understood that Mr. Fairbanks bought the entire stock of Mr. Fiscer, the originator.

# USING THE TELEPHONE

## How a Providence Florist Has Come To Get Fifty Percent of His Business Over the Wire

Macnair, the Florist, of Providence, R. I., who owns two stores in that city and has been in business for many years, says that fifty per cent of the orders which he receives come over the telephone. That is the result of a campaign which he has carried on for a long time to increase his telephone business. Telephone orders have been encouraged until now the stores have two trunk lines and fifteen extensions which are kept busy practically all of the time.

Mr. Macnair was led to develop this telephone work because of the success which he had personally in getting orders through that medium. His first success was due partly to a remarkably smooth, persuasive voice which he possesses and partly to his tact and diplomacy. When he found what could be done in this direction, he set about to make the telephone one of his biggest assets. The business grew gradually but constantly. He thinks so much of it that he paid for a special conduit between his two stores, as the telephone company would not otherwise do the work.

As soon as a clerk comes into the store, he or she is drilled constantly in the use of the telephone. The clerk is told how to pitch the voice and how to modulate the tones and how to deal with special situations. It has been found that customers often have preference for a particular clerk, which is the reason the telephone connections have been extended to all parts of the store. Now, when a particular clerk is asked for, the girl at the switch board can make quick connections. For that reason, too, it is necessary for all the clerks to develop the telephone voice as far as possible.

As Mr. Macnair is a past master at the art of using the telephone, the new clerks watch him very carefully. But the older employees also instruct the newer comers in telephone manners. If a new clerk is found to be making a mistake, another clerk whispers, "Be excused for a moment," and while the customer is waiting sets the clerk right.

Mr. Macnair believs that a telephone voice should not be too suave or oily, nor yet so friendly in tone as to suggest perfect equality. The clerk is supposed to be a servant of the public but not servile. Mr. Macnair constantly deprecates any disposition on the part of the clerk to take a superior attitude. The clerk is told how to lead the customer along, but to do so in such a way that the customer does not feel he or she is being led.

Mr. Macnair of Providence Who Has Come To Be Known as the Telephone Florist.

A difficulty often encountered is catching the name of the customer. People dislike to repeat their names frequently. To be asked to do so creates a feeling of antagonism. If a clerk in Macnair's store fails to get the name the second time, he says, "Oh, excuse me; here is the regular order clerk. Let me turn you over to him." Another clerk then takes the receiver and has two more chances to get the name right, for the customer takes no offense when the second clerk asks the question.

Sometimes a little tact will make it possible to get the name. The clerk may say, for example, "I beg pardon, but is it spelled withan 'e' or an 'i'?" The chances are that the customer will then spell the name in full. Sometimes though this plan causes unexpected embarrassment, and Mr. Macnair cites an instance where a clerk who was having difficulty with a customer's name repeated the formula, "Excuse me; is it spelled with an 'e' or an 'i'?" and was aghast when the somewhat tart reply came over the phone, "With an 'i' of course—H i l l."

Clerks in the Macnair store are shown how it is possible to increase the sales of flowers that are abundant while keeping the customers away from those which are short. At the same time the clerks are told never to say that flowers of any kind cannot be supplied if there is any possibility of obtaining them anywhere. One advantage of telephone sales is that the customer cannot see what stock happens to be in the chest.

Mr. Macnair says the telephone business is a good one for a florist with plenty of capital. It ties up a lot of money, however, for his accounts average to run six months. He delays pressing for payment, but is careful to have his bills go out on the last day of the month. If necessary he begins billing three days beforehand so that there can be no slip-up in this respect. If customers show a disposition to dodge their bills, however, he goes after them with a collector.

When customers move, he gets the address if possible from the person to whom flowers were sent. When the customer learns this fact he usually pays quickly. The accounts of even total strangers are usually accepted unless the amount is very large.

As a result of his telephone business Mr. Macnair has many customers who order from him constantly and yet who seldom if ever come into the store. They have learned to buy over the telephone, but would never think of calling up any other florist establishment in the same way.

# BERTERMAN MADE PRESIDENT

## Hartford Chosen for the Next Convention of the Society of American Florists

### OFFICERS OF THE S. A. F.

**President, Irwin Berterman, Indianapolis, Ind.**

**Vice-president, Wallace R. Pierson, Cromwell, Conn.**

**Secretary, John Young, New York City.**

**Treasurer, John Hess, Omaha, Nebr.**

**Directors, Roy L. Wilcox, Montebello, Cal., Paul R. Klingsporn, Chicaco, Ill.**

Irwin Berterman was elected president of the Society of American Florists and Ornamental Horticulturists at the annual convention at Kansas City last week. His election came after a spirited contest, his opponent being C. C. Pollworth, of Milwaukee.

It was voted unanimously to hold the next convention in Hartford, Conn.

In spite of the intense heat the convention was one of the best in the history of the organization. The attendance was larger than expected, so large, in fact, that the hall was badly crowded at times. It started off with an enthusiasm which was maintained until the end, and the Kansas City florists proved the best of hosts. The decorations were unique and harmonious, including a carload of California palms and boxwoods. The trade display was reasonably complete, although the space for exhibition purposes was not entirely adequate, so that some booths had to be set up in the corridor.

The east, and particularly New England, was not very largely represented. Among those present from that section were Thomas Roland of Nahant, Morris Cohen of New York, A. T. De La Mare of New York, Miss Elizabeth Falk of Jamaica, L. I., Chas. F. Forman of New York, Theo. Fryer of Rochester, N. Y., Henry Goudy of Philadelphia, Stephen Green of Philadelphia, Robert Greenlaw of Philadelphia, Benj. Hammond of Beacon, N. Y., A. N. Henshaw of New York City, Albert M. Herr of Lancaster, Pa., W. D. Howard of Milford, Mass., Roman Irwin of New York City, J. J. Karins of Philadelphia, N. J. Kent of Batavia, N. Y., Jack Levine of New York City, Chas. Liebeck of Philadelphia, H. C. Neubrand of New York City, Chas. Niemann of New York City, C. B. Ogston of Rochester, N. Y., Maj. P. F. O'Keefe of Boston, Wallace Pierson of Cromwell, Ct., H. S. Price of Philadelphia, Paul Rigo of New York City, W. A. Rodman of Brooklyn, Julius Roehrs of Rutherford, N. J., John A. Ruppert of Philadelphia, Max Schling of New York, Anton C. Schultheis of College Point, N. Y., C. W. Scott of New York, S. S. Skidelsky of New York, Charles Smith of Providence, R. I., James

Wallace Pierson
Newly Elected Vice President of the S. A. F.

Smith of Paterson, N. J., G. E. M. Stumpp of New York, Maj. Frank Taggart of New York City, Prof. Charles L. Thayer of Amherst, Mass., B. Hammond Tracy of Wenham, Mass., Theo. Trevillian of Tarrytown, N. Y., Charles Tricker of Arlington, N. J., L. W. C. Tuthill of New York City, L. J. Warshauer of Brooklyn, N. Y., Felix Wrodhel of New York City, John Young of New York City and A. Zirkman of Philadelphia.

After a songfest which was a unique and highly enjoyable feature, the Vice-president, Samuel Murray, called the convention to order and said that the greatest minute of his life would come when he introduced Pres. S. S. Pennock.

Pres. Pennock in his well thought out address made several important suggestions. Among them an endeavor to increase sales on the different holidays, including Armistice Day. He believed that the best results would come from collective advertising in different communities. The time would soon come, he hoped, when we can have a national flower show in some city in the United States or Canada each year, handled by the National Committee.

He said that the annual publication of the society is going to be much better and more comprehensive than anything yet undertaken. It will be of great value to florists, seedsmen, nurserymen and members of the allied industries. This change was brought about on the recommendation of Mr. Thomas Roland.

Pres. Pennock had warm praise for Mr. Benj. Hammond for his work as chairman of the committee on school gardens.

Referring to the quarantine conference and the report sent out by the Federal Horticultural Board, Pres. Pennock said that in all fairness the florists were entitled to a seat on the jury, but were not so honored. On the contrary, the report of the Board made it appear that even Mr. McHutchison was not a representative of the Amer-

### A MESSAGE FROM PRESIDENT PENNOCK

Kansas City, Mo., Aug. 18, 1922.

If I did not publicly express through the trade press the appreciation for all that had been done to make the 38th Convention the success it was, I would feel that I was leaving Kansas City with my work as president unfinished, so on behalf of the S. A. F. I want to take this opportunity to thank each and every one for their valuable help, their kindness, their unfailing loyalty in making it possible to have such a wonderful convention, a convention that will go down in history as one marking progress and making for better working conditions in the Society.

All of this could not have been accomplished but for that spirit of co-operation which was displayed by every one.

To the Kansas City florists I think we particularly owe a debt of gratitude for the special arrangements they made and the way they carried them out. Not only the business part, having every detail cared for most thoroughly, but for our comforts as well, a hospitality that will ever be remembered as a bright spot in our lives.

Not only to the florists of Kansas City are we indebted, but to the city as a whole from the mayor down, including the convention bureau and the convention hall management, do we extend our very warmest appreciation and heartiest thanks.

ican florists. He quoted the report as follows:

"With respect to the florists of the country Mr. McHutchison of New York, an importer and broker, representing that he spoke for this group, etc."

Pres. Pennock said it seemed to him that the florists had been treated in an autocratic way and with but little fairness. It looks as though the department felt that the florists were a very insignificant part of horticulture.

Pres. Pennock recommended the establishment of a service bureau with a suitable appropriation to employ an expert accountant who could be consulted by the members of the society as to a simplified method of keeping their books.

The nomination for officers was made on Wednesday morning. W. R. Pierson proposed the name of C. C. Pollworth, while Philip Breitmeyer proposed that of Irwin Berterman. Mr. Pierson had no rival for vice-president.

## AMERICAN GROWN PLANTS

### Report of the Committee on the Development of American Products

Not much progress has been made so far in the growing of the plants that we have heretofore imported in commercial quantities from Europe, such as Rhododendrons, Azaleas, Boxwood, etc., according to Mr. F. R. Pierson, reporting for the American Products at the S. A. F. Convention.

Continuing his report, Mr. Pierson says: "Mr. Roy F. Wilcox, a member of our committee, representing Southern California, states that during the past few years there has been much development in the horticultural products and large investments are being made in that section. One of the largest industries that has recently been developed on the Pacific Coast is the growing of Kentia palms.

"At present there are about one and a quarter million in the course of development at Sierra Madre and Montebello and large additional investments are being made every year to prepare for a complete rotation. Six years are necessary to produce a marketable crop. Rose growing here has also taken a great lead and there are approxirately six to seven million rose plants now being grown in Los Angeles, Hemet and San Jose.

"Fruit stocks are also being grown extensively, one firm in the North alone producing about eight million. Many are grown in other localities increasing this total greatly.

"One hundred fifty thousand Azaleas are now being grown at Eureka and within a short time there will be a quantity of these available for sale. Rhododendrons are also being grown. Boxwood is being grown extensively, besides Ericas, Aspidistras, etc.

"Certain bulbs also luxuriate in Southern California, such as Freesias, Miniature Gladioli, Spanish Iris, Iris Tingitana. Tuberous Begonias and many others. California is already producing a great many valuable florists' plants and in time they will be more largely produced.

"Mr. Charles Baum reports from Tennessee that that section is producing some very fine stock in the way of Lily bulbs, Lilium Candidum, and other varieties, also Gladioli, Tulips, and Narcissus, with the exception of the tender varieties such as the Paper Whites, and they are being grown extensively further South. He understands that down in Louisiana and Texas Paper Whites are being grown and making finer bulbs than the stock imported from France. Gladioli luxuriate in this section and it would seem that a good many of the Lilies, especially the Black Stem Giganteum, can be grown successfully here.

"Some of the important varieties of Lilies, like Regale, Speciosum varieties and the Black Stem Giganteum, seem to thrive in this locality, particularly in the higher altitudes, growing very luxuriant and doing wonderfully well, and thus far promise to prove successful. Some firms are growing large stocks of the Indian Azaleas as well as the hardy varieties, such as Mollis and Japanese sorts, which promise to be commercially successful.

"In the East Hybrid Tea Roses are being more and more extensively budded and grown and the quality is as good as, if not better than, what we previously secured from abroad, and these are being grown in sufficient quantities to meet the demand. Seedling Orchids are being developed, but it will be a long time before these will be commercially available and, in the meantime, we shall suffer from the absence of collected material. Just how soon the Hybrid Orchids that are being grown will be available commercially, there is a difference of opinion.

"Azaleas are being grown, particularly some of the new Japanese varieties, which promise success eventually, but they are not in large enough supply to be an important commercial factor. Just what can be done along this line, particularly with the Indiana Azaleas, remains to be seen.

"In view of the fact that the Agricultural Department through the Federal Horticultural Board through the operation of Quarantine No. 37 deprived us suddenly of so many plants that we had learned to consider as necessities, we believe that this department should organize a constructive campaign carrying on experimental work in different parts of the country in a broad and comprehensive way, which the individual and the average business man will, or could, not attempt. As we are deprived of many valuable plants that we have heretofore imported, it certainly behooves the Agricultural Department of the country to devote its energies to the development of large horticultural interests which they should be able to do much better than the individual."

## THE CANADIAN CONVENTION

### C. J. Hay Elected President of Florists' and Gardeners' Association

At the 25th annual convention of the Canadian Florists' and Gardeners' Association the following officers were elected: President, C. J. Hay, Brockville; first vice-president, W. C. Hall, Montreal; second vice-president, S. Kirk, Georgetown; secretary-treasurer, H. J. Eddy, Montreal.

During the convention Chas. H. Totty of Madison, N. J., representing the S. A. F. and O. H., read an interesting paper.

At the retailers' session Mr. S. A. Frost demonstrated the use of cedar, hemlock and common ferns for florist work. He advocated using them in sprays or designs as they are cheap and look well. Mr. S. A. McFadden said that the use of white flowers for funerals was decreasing and flowers of all colors were taking their places. The growers are producing very few white roses, he said, as compared with a few

**IRIS AND PEONIES**

Having a large stock of the following Iris will quote special prices for early delivery as I wish to clear the ground: **Arnols, Brooklyn, Darius, Dr. Bernice, Exquisite, Gypsy Queen, Halfdan, Helge, Ingeborg, Jacqueminot, Liabaud, Lord Salisbury, Mme. Chereau, Mithras, Mrs. H. Darwin, Nibelungen, Princess of Teck, Queen of May, Rhein Nixe, Rose Unique, Shakespeare, Sherwin Wright, Walhalla, Walneriana, Ven Geerti, Hector.**

Ask for price list and see what my customers say about the service they receive. Thank you.

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

years ago. He found that, while baskets were becoming very popular at funerals, he did not believe they would ever replace wreaths.

Mr. S. A. McFadden of Toronto was elected chairman of the Retail Section; W. C. Hall of Montreal, vice-chairman; and Mrs. Percy Waters of Toronto, secretary-treasurer.

It was voted to hold the next convention at Windsor.

## TIME EXTENDED

### Ruling on Importation of Stocks of Rhododendron, Azalea and Japanese Maple

August 11, 1922.

Washington, D. C.—The Federal Horticultural Board has investigated the availability of stocks for grafting purposes of Rhododendron ponticum and Azalea pontica seedlings, the importation of which under special permits ceased June 1, 1922, in accordance with Notice issued February 1, 1921. It appears that heavy losses have been suffered in the imported lots of these stock materials and that American seedlings are not yet available. It has been decided, therefore, to extend for one season, or until July 1, 1923, the period during which seedlings of these two plants may be imported. Special permits will be issued for plants of three years' growth or under, with the roots washed free of sand, soil or earth.

It has also been represented that a sufficient supply of seedlings of Japanese maple (**Acer palmatum**) for grafting purposes is not available in this country. This matter has been investigated by the specialists of the Department of Agriculture and upon their recommendation special permits will likewise be granted for the importation of seedlings of this maple of three years' growth or under for the period terminating July 1, 1923. The plants must have their roots washed free of sand, soil or earth.

The entry of these plants under special permit will be surrounded with the same safeguards which apply to other special permits issued under Quarantine 37.

Application for permit should be made on Form 207.

W. A. ORTON,
Acting Chairman, Federal Horticultural Board.

Gilbert Hicks, brother of the late Isaac Hicks, the well known nurseryman of Westbury, L. I., died recently at the age of 84. Mr. Hicks helped organize the famous nurseries, but retired several years ago.

SUBSCRIPTION RATES:
One Year, In advance, $1.00; To Foreign Countries, $2.00; To Canada, $1.50.

**S. A. F. Membership** The members of the S. A. F. at the convention in Kansas City were much heartened at the excellent report given by Secy. John Young, and particularly at what he had to say about the increase in membership. Although not as large as in 1921 when a special membership drive was made, the increase for 1922 has been very satisfactory. The report showed that 393 new annual members and 16 life members have been taken in. This gives a total membership of 4022, of which 1579 are life members. It is evident that the fine old organization is maintaining its supremacy without difficulty, and that as the mother of many other societies it is looked upon with honor and respect.

**Business Costs** There's food for much thought in the recommendation of a standard system of accounting for the florists as made by H. T. Spangler, a public accountant, at the Kansas City convention. After Mr. Spangler had asked the florists if they knew how much it cost to grow their flowers, how many blooms were averaged to the plant, and how the cost of production per plant compared with last year, he then explained the vital necessity of having these facts at one's command. He showed that without such information it is impossible to tell where the leaks are, and so stop them. There are many things, such as hail storms, freezes, poor markets and the like, over which the florist has little control, but there are other items which can be controlled, and they include the operating losses.

As Mr. Spangler points out, many growers are consoled if they make a net profit on all things produced, without much effort to find out where this profit might have been larger. It is a fact, as he stated, that many florists count their own time worth less than they pay a helper. Business isn't worth carrying on and worrying about unless it will pay something more than a day's wage.

The moral of all this is that the florist must keep books and keep them accurately if he is going to know where he stands financially. As Mr. Spangler stated, it may some time become necessary to borrow money from a bank, and this is made much easier if an accurate statement of the conditions can be drawn off the books promptly. The same is true if a business is to be sold. Often a very much larger sum can be obtained if bookkeeping has been accurate and tells the whole story.

Said Mr. Spangler: "Every transaction should be recorded, including all exchange of value such as cash for tools, or any other expenses. Well planned books of account today are greaty influenced by income tax laws. It is just as easy and much cheaper to make a correct return and not a guess one. This is made possible by keeping correct books of account."

Mr. Spangler was quite right in saying that some of the peculiar problems of the florist business need further attention so that the florist himself will know just how to act. The item of a reserve for depreciation on greenhouses and other equipment is an example of this. It is known that many greenhouses depreciate rapidly and some sort of a basis by which this depreciation can be reckoned should be forthcoming. The importance of this matter is realized when one considers that it may have a material effect upon the florist's income tax.

**Educating Florists** It was interesting to have an announcement from the Pennsylvania State College announcing important courses for florists at the same time Mr. Thomas Roland was making his report on the education and training of young men for floriculture at the Kansas City Convention. Mr. Roland said: "In general affairs it has been found that a far greater proportion of college men succeed than of non-college men, and I believe in time this will be equally true of men who have had the advantage of a floricultural college."

In the past there has been a complaint that the more education a young man had the less willing he was to learn the florist business in a practical way. There is less cause for this complaint now than formerly. Mr. Roland advised young men leaving college to take a position where a general collection of plants and flowers are grown and to strive for a general experience, which gives him a wide knowledge and relieves him of much monotonous work. We believe that Mr. Roland is right in saying that even though a man might become a rose or a carnation specialist, he was better off by having a broad general experience.

As in all of his addresses, Mr. Roland made a plea for a broad vision on the part of young florists. He pointed out that, besides the financial results which might be expected from floriculture properly carried on, the business offers unusual opportunities for service to one's fellow men, a fact becoming more important as men see that service is all of life.

**Standardized Names** Delegates to the Kansas City Convention were pleased to have Mr. J. Horace McFarland report that the manuscript for the official catalogue of standardized plant names would be ready for publication at an early date. This great work will undoubtedly be the standard buying and quoting authority for half a dozen years or more. As Mr. McFarland pointed out, it is a practical work showing the accepted scientific name as well as the accepted common name, and presenting accurate lists of all the roses, dahlias, gladioli, iris, peonies, sweet peas and other items. The book will be easy to read because the accepted names are given a separate type showing, making them stick out above the others.

Mr. McFarland reported a hearty co-operation with nearly all of the different horticultural societies and the seed trade, saying that a cold shoulder was shown it by only one organization, the American Carnation Society. We believe that this failure of the Carnation Society to co-operate must have been due to some misunderstanding.

The new book will be needed in the office of every florist and every plant grower. Its publication has been largely a labor of love, and has represented remarkable devotion, with a total disregard of their own interests, on the part of Mr. Harlan P. Kelsey, the nurseryman of Salem, Mass., Frederick Law Olmstead and Frederick V. Coville.

### TRAINING GARDENERS

At Hillcrest Gardens we are much interested in the plans of the Massachusetts Agricultural College and the National Association of Gardeners for teaching boys or young men to garden, as we do a little along those lines at Hillcrest. In reading the prospective plans we were interested because we felt that some of our boys might later have the advantage of this further education.

In America we do not yet seem able to start the skilled gardener in the third generation before he was born, as has been so much done in France and other foreign countries. But the most promising prospective gardener we now have at Hillcrest—and we have some good lads among our boys—is aged four, or, as he says, five in October.

Our reason for thinking that this little chap will be worth training is the joy he takes in the work. When our new shrubs were set out in the spring his great delight was to go through the garden with me to see if the buds had broken through the bark and they had started. It was a wise old man who said, "Train up a child in the way he shall go," and I am inclined to think that the day after this boy sets out a plant or a shrub he will be interested to see whether it has started, and not leave it all to chance. I have sometimes wondered whether the day would ever come in America when gardeners would realize that plants are like children needing to be nursed. So many times they are treated as if all that was required was to put them in the ground. But little Jack is already watching them from day to day to see if they are starting to grow.

The other morning Jack was busy helping to plant a bed of bearded iris, as we had noticed that the iris growing in our wild garden had a finer texture to their blossom than those in the flower-garden, so were experimenting by planting our iris and placing stones over their roots. Jack was working like a man, rolling the stones which were too heavy for him to lift into their place in the bed. While he was at work Mr. Dooley, Mr. O'Brien and some of the other supervisors of the school garden work came to see what we are doing at Hillcrest. They were being shown over the place by one of the older boys. I asked Jack to tell Mr. Dooley why he was putting the stones over the roots of the iris. Jack said: "To keep the dampness in." Then I said to Jack: "Why do we cut off half the flags of the iris?" Jack was quick with his answer, "To make the roots grow."

In America it is hard to tell where the boys will go. Jack with great delight told me the other day, when he saw my footprints in the soft earth, that he was walking in my footsteps. May they lead him into a lifelong love of gardening. As he left the bed where he had helped to plant the iris he was asking for another job.

M. R. CASE.

Hillcrest Gardens, Weston,
July 28, 1922.

### NEW RESTRICTION

August 9, 1922.

Washington, D. C.—Item 3 of Regulation 3 of the Rules and Regulations Supplemental to Quarantine 37 provides for the entry under permit of Rose stocks for propagation, including Manetti, Multiflora, Brier Rose and Rosa rugosa.

Since the entry of such material always carries the risk of permitting the introduction of dangerous insect pests and plant diseases, such material will hereafter be restricted to the smallest sizes possible, namely, 1-2-year old plants not over 18 inches in length. Stems on which to bud Standard Roses will not be permitted entry under the provisions of this regulation.

W. A. ORTON,
Acting Chairman of Board.

### BOSTON

Thomas Bell, a large grower of tuberoses, gladioli, dahlias and roses, with an establishment at Morrisville, Pa., recently spent a few days in Boston, en route to Nova Scotia on a vacation trip. Mrs. Bell accompanied him.

Mr. J. A. Kemp, of Little Silver, N. J., and Mrs. M. B. Hawkes, of Bennington, Vt., were guests of Mr Benjamin R. Norley, of Roslindale, during the gladiolus show. In company with Mr. Norley, Mr. Kemp visited the establishment of Mr. Beasley, of Milton, and the farms of other well known growers around Boston.

# THE GLADIOLUS

## THE NATIONAL SHOW

### Remarkable Display of Seedlings Seen at Kalamazoo

Kalamazoo, Mich., had a warm welcome for the visitors attending the National Gladiolus Show held there last week. Both the Club of Little Gardens and the Chamber of Commerce aided greatly in making the affair a success. According to Pres. Hinckle the display of "glads" was the best the society had ever made in its thirteen years' existence.

The outstanding feature of the show was the exhibition of seedlings, which included many very fine specimens. The Vaughan Seed Co., of Chicago, put up a remarkably fine display along this line. The flowers were in superb condition and aroused much admiration. Vaughan's White seedling, a very large white gladiolus with much substance, was without question the finest white gladiolus in the show. This variety should prove exceedingly popular among florists.

As was expected, Mr. A. E. Kunderd made a very large exhibit, including a great number of seedlings. Unfortunately he had been obliged to contend with six weeks of very dry weather so that his flowers were not quite as good as would otherwise have been the case; but he received a silver cup and two silver medals. He was given the first prize for a pink seedling. Mr. Kunderd was also awarded first prize, the Mitchell cup, for having developed more varieties than any other individual in the world.

The Wing Seed Co. had a splendid exhibition of seedlings, including several kinds which are sure to be widely grown. The big feature, though, was the display of P. Vos & Son, Grand Rapids, who were given the president's cup for display. This exhibit was arranged on the stage and the steps leading to it. Colored draperies were used very effectively back of the flowers, and the whole arrangement was most artistic.

Mrs. M. B. Hawkes, of Bennington, Vt., was one of the few exhibitors from the east to have her flowers arrive in good condition. She made an excellent showing. Both Dr. F. E. Bennett, of St. Thomas, Canada, and Madison Cooper, of Calcium, N. Y., put up good displays.

The United Bulb Co. received the Rotarian's silver cup.

Among the flowers at the show attracting great attention was the red variety Illuminator. This variety was given a first certificate of merit. Dr. Bennett had several spikes in his display which stood up better than any other flower in the show. Blooms which were cut on Monday showed only one flower gone on Friday.

Among those present from distant sections were Mr. David Tyndall of Brockton, Mass., the secretary; Dr. Irving Moody, of Brockton; Dr. F. E. Bennett of St. Thomas, Canada; Mr. A. E. Kundred of Goshen, Ind.; John Prouty of Baldwinsville, N. Y.; Madison C. Cooper, of Calcium, N. Y.; Mr. A. L. Vaughan of Chicago; Mrs. M. B. Hawkes of Bennington, Vt.

During the show a luncheon was served at the noted peony farm of Dr. Upjohn, and a reception was given for Mrs. Francis King, of Alma, Mich., who was a guest during the show. The local committee handling the exhibit were Kalamazoo members of the Club of Little Gardens, the General Committee being Allan C. Frink, Mrs. Alexander Clark and Prof. W. E. Praeger.

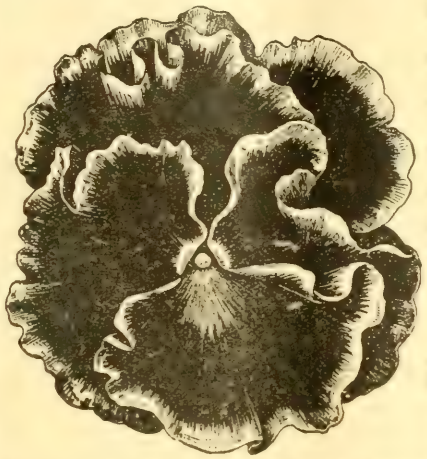
Invitations for next year's show were received from Rochester, Buffalo, Chicago and New York City. The selection of the convention city will be made by the Executive Committee.

Packing Gladiolus Spikes for Market at Farm of Jelle Roos

## BOSTON GLADIOLUS SHOW

### A Large Exhibit With Flowers of Exceptionally Good Quality

It is seldom that better gladioli have been seen than those exhibited at the combined show of the New England Gladiolus Society and the Massachusetts Horticultural Society in Boston last week. The exhibit was very large and very complete. A particularly satisfactory feature of the show was found in the large number of individual growers making entries. Probably the most conspicuous exhibit was that of A. L. Stephen, of Waban, Mass., an amateur, but a very skilful grower. It was arranged by Mr. James Wheeler in his usual artistic manner.



Mr. L. D. Towle had an unusual arrangement of gladioli in the form of a pillar with ferns at the bottom. Mr. Thomas Cogger, of Melrose, had a basket of American Beauty which aroused as much comment as anything in the show, and was given a silver medal. American Beauty has the color of the rose bearing that name, with a creamy yellow throat, and opens five or six flowers at a time. Mr. Cogger also featured Mrs. L. S. McLeod.

Mr. Charles Fairbanks, of Lexington, featured Kunderd varieties, of which he has a great number.

Several growers in the vicinity of Boston are great admirers of the productions of J. A. Kemp, of Little Silver, N. J., and featured them in their exhibits. Mr. Kemp also had an exhibit of his own which included his splendid varieties White Wonder and Pink Wonder.

A splendid basket of Schwaben was shown by James Wheeler, of Natick, Mass., and such varieties as Le Marechal Foch, Mrs. Dr. Norton, Europa, Mrs. Pendleton and Alice Tiplady were splendidly done. Gold Measure was

# The KENILWORTH Giant Pansy Seed

No.
28. **GIANT MASTERPIECE.** A remarkable type, the curled wavy petals giving the flower a double appearance; large flowers of great substance on long, strong stems. Trade pkt., 45c; 1-8 oz., $1.10; ¼ oz., $2.00; ½ oz., $3.80; 1 oz., $7.50; 4 oz. $27.00.

30. **GIANT THREE AND FIVE BLOTCHED.** The petals being distinctly marked with three or five large, dark blotches. Trade pkt., 40c; 1-8 oz., 90c; ¼ oz., $1.65; ½ oz., $3.10; 1 oz., $6.00; 4 oz., $21.50.

32. **GIANT PARISIAN.** The flowers are of enormous size and beautifully marked, mostly five dark blotches on white and yellow ground on unusually shows mixture. Trade pkt., 40c; 1-8 oz., 90c; ¼ oz., $1.65; ½ oz., $3.10; 1 oz., $6.00; 4 oz., $21.50.

34. **GIANT BRONZE.** A fine mixture of all shades of velvety brown bronze, Havana brown, mahogany and copper shades. Trade pkt., 40c; 1-8 oz., 90c; ¼ oz., $1.65; ½ oz., $3.10; 1 oz., $6.00; 4 oz., $21.50.

36. **TRIUMPH OF GIANT.** The plants are of a robust growth and form compact bushes of a round shape. Trade pkt., 40c; 1-8 oz., 90c; ¼ oz., $1.65; ½ oz., $3.10; 1 oz., $6.00; 4 oz., $21.50.

40. **GIANT BATH'S EMPRESS.** The finest of fancy English Pansies. Trade pkt., 45c; 1-8 oz., $1.10; ¼ oz., $2.00; ½ oz., $3.80; 1 oz., $7.50.

50. **ORCHID-FLOWERED, Mixed.** A dwarf, free bloomer, with a range of delicate colors that do not exist in any other Pansies; a remarkable combination of light rose, shell pink, blush mauve, fawn, light brown, orange and chamois. Trade pkt., 35c; 1-8 oz., 75c; ¼ oz., $1.35; ½ oz., $2.60; 1 oz., $5.00; 4 oz., $18.00.

## New Early Flowering Giant Pansies

They are three to four weeks earlier than other Pansies, in cold frames or field they have four or five large blossoms, when other Pansies planted at the same time are only showing bud. The richly colored, large well formed flowers on long, stiff stems, are very fragrant

**TRY SOME AND YOU WILL BE SATISFIED**

1. **Jove.** Lower petals violet, upper one light blue.
5. **Mars.** Cornflower blue
6. **North Pole.** Pure snow white
7. **Woden.** Quite black
8. **Helios.** Pure yellow

10. **KENILWORTH GIANT EXHIBITION** is the very finest complete mixture ever sent out. Seed carefully saved only from marked plants of the best varieties with the largest and best shaped flowers and richest coloring. It is impossible to convey an adequate idea of the delightful variations in color and markings of this unrivaled mixture. Trade pkt 60c 1-8 oz $1.35 ¼ oz $2.50 ½ oz $5.00 1 oz., $10.00 4 oz $35.00

12. **KENILWORTH GIANT PRIZE.** The enormous flowers are of perfect form and of great substance. Petals overlapped and undulating. The rich coloring and markings are widely varied some flowers being almost self colored. Trade pkt 60c 1-8 oz., $1.35 ¼ oz $2.60 ½ oz., $5.00 1 oz., $10.00 4 oz., $35.00

19. **TRIMARDEAU GIANT PANSY,** improved, it is far superior to the ordinary run of Trimardeau that is sold. It is a very showy class of vigorous compact growth. Flowers of enormous size in all the self colors, blotched, striped margined, etc. Trade pkt 35c 1-8 oz., 75c ¼ oz $1.35 ½ oz., $2.60 1 oz $5.00 4 oz., $18.00

20. **PRINCESS, the New Upright Pansy.** This strain is entirely distinct from all others. It is absolutely compact, upright growing. The flowers are mostly blotched and frilled like the Masterpiece of good form and heavy velvety texture and heavy stems carried well above the foliage. Attractive by its brilliancy of its colors. Trade pkt. 40c 1-8 oz 90c ¼ oz., $1.65 ½ oz $3.10 1 oz., $6.00

22. **GIANT KENILWORTH STRAIN.** The flowers are of perfect form and of large size, many of the finest flowers are 3 inch. It is a striking collection of beautiful colors and markings rich with shades of red, brown, bronze mahogany and many others too numerous to mention. Light medium or dark mixed. Trade pkt., 40c 1-8 oz., 90c ¼ oz., $1.65 ½ oz $3.10 1 oz $6.00 4 oz $21.50

24. **GIANT KENILWORTH SHOW** is undoubtedly the largest flowered Pansy in the world the immense flowers are of circular form A beautiful collection of colors and markings. Trade pkt 45c 1-8 oz., $1.10 ¼ oz $2.00 ½ oz $3.80 1 oz., $7.50 4 oz., $27.00

26. **GIANT KENILWORTH CUT FLOWER MIXTURE.** Is a distinct class by itself far surpassing all other strains as a cut flower for inside or outside growing the large flowers are carried erect above the foliage on heavy stems 6 or 7 inches long in the most graceful manner, and stand the hot, dry weather well. Trade pkt 15 1-8 oz., $1.10; ¼ oz., $2.00; ½ oz., $3.80; 1 oz., $7.50; 4 oz., $27.00.

14. **Winter Sun.** Golden yellow, with dark eye
15. **Ice King.** Silvery white, with dark blue eyes
16. **Celestial Queen.** Light or sky blue.
17. **Charm of March.** Dark velvety blue.
18. **Mixed.** The above nine colors

Trade pkt. 35c 1-8 oz., 75c. ¼ oz., $1.35. ½ oz., $2.60, 1 oz., $5.00.

**GIANT PANSY SEED**

**In Separate Colors**

Trade pkt., 35c 1-8 oz., 75c. ¼ oz., $1.35 ½ oz., $2.60; 1 oz. $5.00

38. **Mme. Perrett.** Red and wine shades
42. **Adonis.** Light blue, dark center.
44. **Black.** Almost coal black
48. **Lord Beaconsfield.** Purple shaded white
50. **Goliath.** Large, curled yellow, blotched
54. **Pres. Carnot.** White, five blue blotches
56. **Light Blue Shades.**
58. **Indigo Blue.** Deep velvety blue
60. **Hortensia-Red.** Light rose
62. **Prince Henry.** Dark blue
63. **Ruby King.** Superb crimson and red
64. **Snow Queen.** Beautiful satiny white
66. **Almond Blossom.** Delicate rose
68. **Andromeda.** Curled apple blossom.
72. **Orchid Flowered Mammoth.**
74. **Sunlight.** Yellow, with brown blotches
78. **Baldesmald.**
80. **Purple.** Large, rich deep color
82. **Giant Peacock.** Rich ultramarine blue
84. **Mercury.** New. A deep blackish purple
88. **Emp. Franz Joseph.** White, blotched blue
90. **Vulcan.** Dark red, with five blotches.
92. **Victoria.** Blood red, violet blotches.
98. **Psyche.** Curled white, with five blotches
100. **Yellow.** With dark blotch
102. **Yellow.** Large golden yellow.
104. **White.** With violet blotch
106. **White.** Large satiny white
108. **Emp. William.** Ultramarine blue
110. The preceding 22 colors mixed

## Free Offer of Kenilworth Grown Pansy Seed

### THE BONUS MIXTURE

**I have a surplus of the four best selling varieties due to the unusually good season for growing Pansy Seed. I will give it as a bonus with all orders for Pansy Seed at the rate of 1,000 seeds for every dollar's worth of seed and with other amounts in the like proportion.**

### THIS IS A TIP-TOP MIXTURE

**and is sure to please YOU. THIS OFFER HOLDS GOOD AS LONG AS I HAVE A SURPLUS OF THE ABOVE VARIETIES.**

**Kenilworth N.J.**

inferior to flowers grown last year.

Henry R. Comley, of Park St., Boston, was the only florist to exhibit and had some handsome baskets of yellow flowers arranged with oak leaves..

Mr. Fairbanks received the New England Society's silver medal for the best collection of Primulinus Hybrids. He also won first for both fifty and thirty-five Kunderd varieties,

Mr. Stephen won the Society's silver medal for one spike, best seedling. This was a splendid orange salmon flower. Mr. Stephen also won a silver medal from the Massachusetts Horticultural Society for a display of a collection of not less than fifty named varieties. Some excellent dahlias were shown, including several seedlings of great promise from Mr. Fred Fisher. One variety which attracted much attention was called Hav-a-look Gem.

Seth A. Borden, of Fall River, made a beautiful showing of Gloxinias.

A special feature of the show was a display of hardy perennials in the upper hall. The Bay State Nurseries, of North Abington, Mass., which has not been showing recently, put up a magnificent display with seventy-five varieties of hardy flowers and over

# King GREENHOUSES

The selection of a greenhouse is not a difficult problem if you have the facts about King Greenhouses. Their superior design, construction and growing qualities—the ease with which they are erected and maintained, and their long life make them the houses which will pay you a bigger dividend on your investment.

There are various bulletins telling about King semi-iron, pipe iron frame and steel frame houses as well as greenhouse supplies. Write for the bulletins, which will be sent without cost or obligation, and have all the facts. You'll decide on the King.

*When you think of good greenhouses, think of KING*

fifty varieties of perennial Phlox. It was one of the most complete and satisfactory displays of the kind ever seen in the hall. The Bay State Nurseries were awarded a silver medal and the first prize on the general display of Phloxes.

The Cherry Hill Nurseries, of West Newbury, Mass., also made an excellent exhibit of Phloxes, containing a number of kinds which aroused much interest.

The show was so good that it was continued through Monday, instead of closing on Sunday night as was originally planned.

## MANSFIELD GLADIOLUS SHOW

The Mansfield (Mass.) Gladiolus Association held its fourth annual show last week, and scored another distinct success. There are few cities or towns in the country which could make such an elaborate exhibit, and the show has become so well known that visitors were present from other places.

The most conspicuous feature was the display of the Saunders Garden at No. Scituate, R. I., owned by Dr. B. M. Latham, of Mansfield. This display occupied the entire stage. It consisted of a huge background made of oak leaves against which were arranged the letters making up the words "Saunders Gardens." These letters were composed of flowers of the gladiolus Pearl, a charming pink variety. The manner in which this work was done revealed the possibilities of gladioli in the making up of florists' pieces, and was a reveleation to many of the visitors. Six hundred spikes were required to complete the words.

Although not entering his flowers for competition, Mr. A. L. Stephen, of Waban, put up a fine exhibit. Other exhibitors were Frank O. Shepardson, William S Harris, Elmer Smith of Myricks, E. N. Fischer of Jamaica Plain, Clark M. Brown of Ashland, John Zeestraten of East Bridgewater, William E. Clark of Sharon, Massasoit Gardens of North Attleboro, Willis E. Chase, Fred S. Reed, B. R. Stevens, Jane Bushnell, Mrs. A. Z. Mayo of Canton, Albert L. Lehan, Frank Steadman, Frank R. Sawyer.

The judges were A L. Stephen, Thomas Proctor of Wrentham, and Clark W. Brown of Ashland.

Besides gladioli some very good dahlias were shown, the largest collection coming from Carver & Sampson of Brockton, who had thirty-five different varieties. This is the first time that this firm, which is growing dahlias on two locations in Brockton, has exhibited at Mansfield. Mr. Zeestraten, who is famous for his gladioli, is also growing dahlias and made an excellent display.

The prize for the best glad collection went to William S. Harris, who was awarded the medal of the New England Gladiolus Society. A cut glass vase offered by the Mansfield Gladiolus Association for the best ten vases of ten varieties went to Albert L. Lehan.

## HAS THIRTY-EIGHT ACRES

### Jelle Roos Now One of the Biggest Gladiolus Growers

The ten acres of additional land planted to gladioli by Jelle Roos of Concord, Mass., this season, has made him one of the biggest growers in the East. Mr. Roos now has thirty-eight acres of glads under cultivation. This means a very large number of bulbs, for Mr. Roos plants thickly. While formerly he was careful to space everything except the small bulblets, in triple rows, he now scatters the bulbs in the rows, even in the case of the larger sizes. He says that the scarcity of competent help makes it necessary for him to follow this practice. He makes an effort, however, to have the larger bulbs planted fairly deep, getting them about five inches underground. Mr. Roos has just been calculating the number of bulbs handled last year. He finds that he sold more Halleys than any other kind, putting out 800,000 of these bulbs. He says he could have sold more if he could have had them, which indicates that the popularity of Halley has not begun to wane. America and Mrs. Francis King came next in the number sold.

Mr. Roos chose well when he selected his present farm in Concord. The loose sandy soil, free from stones, is admirably adapted for growing gladioli. It is heavily fertilized, as Mr. Roos keeps a dairy herd of eighteen cows, largely for the purpose of supplying manure, although of course he sells milk, too.

Cultivation is started before the bulbs are up in the spring, and continues throughout the season. Two men with horses are kept at this work almost all the time. It is Mr. Roos' practice to go through the fields two or three times with a cultivator which hills up the soil along the row, thus covering the weeds close to the plants, and then going through with a weeder which levels the ground again. In this case practically all hand word is done away with.

As soon as flowers begin to show, topping is begun, except in the case

of the spikes which are to be marketed. Mr. Roos considers topping of great value in order to increase the size of the bulbs. The work is done with a knife, taking off the flower stalks just above the leaves. It is done as fast as the flowers begin to show color, so that they can be identified. They are not cut, however, until identification is possible, because otherwise rogueing could not be done effectively. By this practice it is an easy matter to rogue out any varieties which are out of place. Tall stakes are driven into the ground to mark the end of the variety rows.

During the winter months the bulbs are sorted by means of a machine. There are very few growers in the country who have such a machine, and if I am not mistaken all the others are operated by hand power. The machine in Mr. Roos's storage cellar runs by electricity. Mr. Roos also has an exclusive attachment for eliminating the chaff. It consists of a blower which removes all the dirt, carrying it through a tunnel to the open air. The sorter and the blower save a great amount of manual labor.

Mr. Roos, like most growers, formerly used storage trays with slatted bottoms. This year he is making over all these trays to a solid bottom.

While Mr. Roos sells a considerable number of blooms, he does not place great emphasis on this end of the business in seasons like this when the prices run very low. In the past he has shipped flowers to New York, but the market there has been glutted to such an extent this year that he has greatly reduced his shipments. When sending spikes to New York he cuts them the moment color shows. This work is done in the morning, and the stems remain in water until 4 o'clock, when they are placed in their boxes for shipment. The spikes are made up into small bundles tied at the base of the stems with string. Flowers for the Boston market are sent in by truck and are kept in pails of water until they reach the city.

In spite of the great expansion which has come to the gladiolus business Mr. Roos believes that it will continue to grow. There are thousands of people, he said, who have not yet become familiar with the gladiolus at all, and as soon as they get acquainted with the flowers they want to grow them.

## FAVORS QUARANTINE 37.

### Theodore F. Borst Says Such Protection Needed

Mr. Theodore F. Borst, of Little Tree Farms, Framingham, Mass., has given public expression of his opinion in regard to Quarantine 37 as follows:

"Every real grower knows the danger of foreign pests and will fight for such protection as Quarantine 37 gives.

"A foreign pest is not only far more difficult to counteract than a native trouble, on account of the absence of natural enemies, but the very name of a foreign pest acts as a tremendous deterrent to business. People are so afraid of these things that the public is panic stricken and more interstate quarantines result.

"Let me say that because there was not a quarantine like 37 some years ago a foreign disease was imported, and we have personally sustained losses amounting to thousands of dollars from a curtailment of our markets owing to interstate quarantines. The losses in New Jersey were also particularly heavy.

"Every genuine grower wants neither the danger to his own crops nor the market curtailment due to a quarantine between states. The struggle in Washington, if one comes, will be very clearly lined up with the growers on one side; and on the other those who do not grow any crops, but sell only.

"The members of the American Propagators' Association will certainly fight to the limit should there be any question of not continuing this protection. But we have entire confidence that the United States Government will not interfere with the more favorable situation which has resulted from the operation of Quarantine 37."

## HORTICULTURE PUBLISHING COMPANY

739 BOYLSTON STREET
BOSTON, MASS.

# George Watson's Corner

"You in your small corner and me in mine."

Now that the boys are all getting back from their vacations they look happier and more contented with their jobs. It takes a day or two to get into the hang of things but after that the hum and pep, once more! We Americans cerainly do love work and hustle. Of course a vacation is all right and we've got to have it but after it's over—Bing! Boys come on, get busy here, now we've got to get this thing running right. Put some life into it.

J. Horace MacFarland certainly has the gift of saying things in crisp and understandable language. His digest before the S. A. F. on the standardizing of plant names is a gem, and conveys a lot of sound sense in words that bear the thrill Jeffersonian—in addition to being of great advantage to the advancement of horticulture in a field which greatly needs clearing.

The allied committee on quarantine, representing the principal horticultural societies of the country, are wide awake to the work of the Federal Board in Washington and come out strongly against Bulletin 152. This committee has been at work for over two years, and is a powerful agency for good.

If you want to hear something in the John Boyle O'Reilly line just ask Tom Hogan what he thinks of a new song. We handed him one recently entitled, "Pennsylvania," words by a well known poet, music said to be an old Scotch air. Tom took it home and went over it on the piano with the madame. Next day he reported: Why, George, that song can't be sung except by somebody who can't sing. It would take a cornet to do some of it. We trust he did not refer to us as the singer, nor to Stuart Leake, nor John Burton. There is often a bit of sarcasm hidden in these Irish bulls.

Hosta subcordata grandiflora, as Bailey puts it, or as it is more commonly known, Funkia subcordata grandiflora, is an excellent hardy perennial for garden or grounds, and its lovely, pure white, lily-like flowers with their delicate orange fragrance are really delightful. But as a commercial cut flower for dollars and cents we fear it will hardly pay expressage. The trouble is, only one or two flowers open on the round head of 6 to 10 at one time; each one lasts one day, the oldest showing its drooping the next morning and very conspicuously so. So that, while the gladiolus has the same proposition, it has the big advantage of having a spike, instead of a head, and the vanishing flower is not noticed. Some nice lots of the Hosta have appeared on the market this August and we all appreciate them but there seems to be few buyers.

The Commodore writes from Waretown, August 16th, that himself and the madame are well and enjoying their summer sojourn among the sea breezes of Barnegat Bay. He has not done much fishing so far, as he has been too busy on other jobs. What the other jobs are, is left to imagination. Mending plows, digging ditches, most likely; and a little iron moulding, tinsmithing, and tailoring, thrown in, as a pathological conservative. He sends his kindest regards to all his old friends and regrets he was too busy to go out and meet them all at Kansas City.

P. Joseph Lynch of Indiana with his good lady and their two happy boys passed through on the 16th on their way from Canada to West Grove. Mark, the eldest boy, had a chance to sniff the atmosphere of Dorner's, sit on a stool and chat with the head waiter. It seemed to please him much more than the jokes passing between his daddy and yours truly.

Antoine Leuthy of Boston was another recent visitor. He came partly on business, partly for a change of air. Has been under the weather lately, and had to stay home while the madame and family went on their European trip, which he had fondly hoped to enjoy as one of the party.

Stuart C. Leake of Richmond, Va., also gave us a call. If we were a profane person and of cockney dialect we would be liable to say we were 'L on 'L's this week. Lynch, Leuthy and Leake, all in a bunch! Other visitors included Wm. N. Jennings, superintendent of Parks, Charleston, S. C., accompanied by his son, en route for Boston; Mr. and Mrs. Charles Patterson, Baltimore, Md.; E. Sutton, Greensboro, N. C.

## REFRIGERATION MATTERS

### Mr. P. B. Rigby's Paper on the Subject at Kansas City Convention

The subject of refrigeration for the florist received much attention at the Kansas City Convention. One of the most interesting papers was that presented by P. B. Rigby, Vice-president of the S. S. Pennock Co. Mr. Rigby said in part:

Before the time of refrigerating machines, ice had to be used and it still is used in the majority of the smaller establishments. Its disadvantages are very great, including dependence on a source of supply, the amount of cooling space taken up by the ice bunkers, the necessary slop encountered when filling the bunkers, and the inability to maintain adequate temperature during heated spells, when there is a continual opening of the refrigerator doors.

Use of Refrigerating Machine: Refrigerating machines are past the experimental stage, and are successfully operated whether a small or large amount of refrigeration is required. The automatic refrigerating machine is easily operated by any one with ordinary care and attention. The increase of refrigerating space is fully 25 per cent greater because of the saving of bunker space and the temperature is easily maintained at the required point.

The brine system is a safe and sure system. All danger of damage from ammonia leaks is eliminated, and this is of great importance, for if such a leak does occur in a refrigerator the contents will be entirely ruined. The equipment required with a brine system is a little more expensive than in the case of direct expansion, but this expense is nothing compared to the insurance you have against loss from ammonia leaks.

#### The Brine System

The brine system requires a tank containing the brine which is cooled by compression in the refrigerating machine to any required temperature, and then circulated through the coils in the refrigerator by means of small centrifugal pumps. The action is under thermostatic control, the compressors starting and stopping within a 3 deg. to 5 deg. range of a predetermined brine temperature. The pump which circulates the brine is also under thermostatic control, and operates within a one degree range. Your temperature is, therefore, at all times close to a pre-determined point regardless of the opening and shutting of doors.

The size of the machine used is entirely regulated by the amount of refrigerating space required and the temperature to be maintained. Machines are rated in terms of tons, a one-ton machine having a cooling capacity equivalent to that of a ton of ice melted in 24 hours, and so on. Best results are obtained from a machine of somewhat greater capacity than is required as the machine will not then be overworked. The initial increased expense of installation is small as compared to the results obtained and the power consumed is not much greater, as the machine will not have to be run for so long a time to effect the required temperature.

Any refrigeration engineer can tell you the size of machine required to maintain a certain temperature for a certain space. From practical experience I have found that a 2½ ton machine will in warm weather serve to maintain almost continuously a brine temperature of 15 deg. to 18 deg. above zero, which is about right to maintain a temperature of 40 deg. to 45 deg. above zero in a room with a capacity of 1500 to 2000 cu. ft.

#### Refrigeration Costs

A 2½ ton automatic refrigerating machine with a brine tank, 5 horse power motor for compressor, two centrifugal pumps, each with ¾ horse power motor (one for spare) for circulating the brine through the refrigerating coils, and capable of cooling 2000 cu. ft. of space to temperatures required for flowers, together with necessary thermostats, can be installed for possibly $5000 to $6000.

The cost of operation for such equipment depends on the cost of electric current. At 5c per kilowatt hour the expense will run from $35 to $80 per month, with an average of about $60. To this

43 WEST 18th STREET, NEW YORK

*When writing to advertisers kindly mention HORTICULTURE*

The John C. Meyer Thread Co. were the first to introduce the Meyer green Florists' threads that would not fade or change color for Florists' use. Ask any of the wholesale Florists or growers about the Meyer green Florists' thread and they will tell you it is the best.. It will go twice as far as ordinary thread and the Florist can do better work with it. Write for prices and samples and we will see that you get the best thread in the world.

must be added the depreciation, of 10 per cent on the equipment, and the necessary repairs for maintenance which will bring the average cost to about $150 monthly. Ice at $6 per ton for the same cooling capacity would cost at least $15 per month, and would require much more space for refrigerator, due to a loss of at least 25 per cent for burner space.

In no respect does it so compare at all favorable to the use of ice as against refrigerating machines working automatically for constant space of time with a range of from. The temperature is always even, day or night, with the use of a refrigerating machine, and dependence on an outside source is entirely eliminated. The temperature can be regulated to suit the requirement, while with ice it cannot be regulated at all.

To prevent an even temperature in any refrigerator, a fan of some kind would have to be used. Any refrigerator will always vary 5 or 6 degrees between the bottom of the box and the top. This variation, however, is of little importance, as a temperature of between 40 and 50 degrees allows 24 hours adequate for the preservation of flowers and green after. Factory results advocate between the range.

## GENERAL NEWS

Sluis En Groot's Koninklijke have discontinued their agency in New York City and will now do business with this country direct from their office at Enhuizen, Holland. Herbst Bros. have been acting for them.

Florists will wish that more people would take the same attitude as the late Mrs. Alma Davey, who passed away recently in Buffalo. Mrs. Davey provided in her will that a thousand dollars be used for placing flowers on her grave during the seasonal part of the year.

T. R. Gorton, of Gorton & Story Greenhouses at Norwich, N. Y., has purchased the interest of Mr. Story and now controls the business alone.

**IRISES**
FRYER'S NEW IRIS

Mr. P. L. Ritter of Glencoe, Ill., who visited me in Iris time wrote me as follows:

"My dear Mr. Fryer: I was greatly surprised and pleased with your new Iris. From what I had heard and read I imagined they were all, or most all, in the class of yellows and maroons, and all short stemmed varieties, but when I saw the great diversity of colors as well as form, many with fine long stems and conspicuously good foliage, I was greatly impressed with what you have accomplished with your crosses. Your magnificent Mrs. Fryer and Kashgia Pixie are outstanding varieties. C. P. Connell and Lowell are excellent and for flowers and lots of them I have never seen anything equal to your Dr. Andrist, Aunt Rachel, Barton Harrington, W. F. Christman, and many others. Some of the new seedlings which we so thoroughly enjoyed that day are very fine, particularly the beautiful pink one, 'a real honest to goodness pink one too'."

My summer list is now ready and prices on my new Iris have been greatly reduced. Also Delphinium, Peonies, Phlox and other hardy plants.

WILLIS E. FRYER, Mantorville, Minn.

# Principles and Practice of Pruning

By M. G. KAINS

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The accumulation of new knowledge has become very considerable, especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book as this, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth. This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself, a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery. There are 400 pages in all.

Price $2.50

# Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, $2.25.

# BURPEE'S SWEET PEAS

The Burpee Early Flowering Sweet Peas are recognized as leaders in their various colors and they are grown extensively by all florists who demand the very best

The careful hybridization work carried on at Burpee's Fordhook Farms in Pennsylvania, the growing of the seed crops on Burpee's Floradale Farms in California, and our extensive indoor and outdoor trials give us a unique opportunity to supply the florists with the very best that can be had in Sweet Peas. Everything possible is done to insure the quality of Burpee's Sweet Peas.

Reproduced from a Fordhook photograph — actual size.

Mrs. Warren G. Harding is one of the most admired Early Flowering Sweet Peas we have ever originated.

**MRS. WARREN G. HARDING**
*"The Harding Blue"*

**Mrs. Warren G. Harding** is a deep shade of silvery blue. It is pure in color without any suspicion of mauve or rose. The flowers are immense in size with a broad and much frilled standard. It is a vigorous grower, bearing large, four-flowered sprays in great profusion. Awarded Certificate of Merit at the International Flower Show held in New York, March, 1921. **Trade packet, 50 cts.; oz., $2.50; ¼ lb., $7.50; lb., $25.00, postpaid.**

**BURPEE'S ORANGE**
*"A pure glistening orange"*

**Burpee's Orange** is in every way distinct as there is no trace of pink or orange-pink in either standard or wings. It is a true glowing orange self, a shade that looks attractive under artificial light as well as in the day-time. The flowers are of immense size and beautifully waved and are borne in fours on long stems. **Burpee's Orange** was awarded a Certificate of Merit at the International Flower Show held in New York, March, 1921. **Trade packet, $1.00; oz., $5.00; ¼ lb., $15.00; lb., $50.00, postpaid.**

**CHEERFUL**
*"A rich shade of rose"*

A most appropriately named variety with large well waved flowers of a "cheerful" shade of Begonia-Rose. Few varieties make such an imposing bunch. A good strong grower and profuse bloomer. Awarded Certificate of Merit at the International Flower Show held in New York, March, 1921. **Trade packet, $1.00; oz., $5.00; ¼ lb., $15.00; lb., $50.00, postpaid.**

**SUNBURST IMPROVED**

The color is a pleasing and attractive shade of rich salmon-pink, intensified toward the margin with a cast of amber and salmon. Immense flowers borne in fours on long and stout stems. **Oz., $1.00; ¼ lb., $3.00; lb., $10.00, postpaid.**

**MRS. KERR**
*"The Best Early Flowering Salmon"*

**Mrs. Kerr** has created a sensation whenever exhibited. The color is a pleasing shade of rich salmon overlaid with a soft tinge of orange. It is an indescribably beautiful flower of magnificent size and superb form. Awarded Certificate of Merit at the International Flower Show held in New York, March, 1920. **Trade packet, 50 cts.; oz., $2.00; ¼ lb., $6.00; lb., $18.00, postpaid.**

**WHITE STAR**

A first-class black-seeded white bearing elegant sprays. The flowers are artistically arranged in fours on long and strong stems. The plants are robust and branch freely. Awarded a Certificate of Merit at the International Flower Show held in New York, March, 1921. **Trade packet, 50 cts.; oz., $2.00; ¼ lb., $6.00; lb., $18.00, postpaid.**

## BOSTON

The W. W. Edgar Co., of Waverley, has been forcing a great many bulbs in past years, but is to do even more along this line the coming season. Orders for 250,000 bulbs have been placed and the plan of forcing them in a covered shed on shelves with burlap hung in front of them is to be continued.

Henry Penn has purchased a new home on Winslow Road, Brookline, taking possession early this month. The house is built of stone, and is very handsome in its proportions and appointments.

Harold J. Ryan, the well known young florist of Cambridge, is soon to erect a new residence. It will be located at the end of the greenhouse range, and Mr. Ryan hopes to begin work in a few weeks.

Carpinella, the North End florist, suffered considerable damage recently from a fire in the building where his shop is located.

Harold J. Patten, the carnation grower of Tewksbury, Mass., recently suffered a painful injury as a result of a fall in one of his greenhouses.

## NEWS NOTES

It is announced that Mr. Alb. Millard has resigned as superintendent of Greystone, the estate of Samuel Untermeyer, Tarrytown, N. Y.

Gustav F. Herthal has leased a store at 989 Broad St., Bridgeport, Ct., where he will open a florist shop.

The New York Federation of Horticulture Societies and Floral Clubs will hold its annual meeting in the Commissioner's Office at the New York State Fair in Syracuse, Wednesday, Sept. 13, at 2 P. M. These meetings are always largely attended and of unusual interest.

Mr. Frank H. Ryan has become gardener to Gen. Edward R. Champlin, Beverly Cove, Mass. He was formerly gardener on the late W. Harry Brown estate at Beverly.

# -HORTICULTURE-

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 189[illegible].

Vol. XXXVI SEPTEMBER 11, 1922 No. 5

## THE TALK OF THE TRADE

I have been waiting the opportunity for some time to look over Mr. Montgomery's new rose "Commonwealth," so of course took full advantage when I came through Cr[illegible]well last week.

I must say that I was agreeably impressed with this [illegible] It appears to be a nice, easy grower; foliage is vigorous and good to look at; the size and form of the flower, so far as I can see, are all that one can ask for; but the point that I like as much as anything is the color of Commonwealth. It is somewhat like Premier, but the color is clear and I can't see where there will be any tendency toward it turning blue. From what I can see now I think this rose, grown under good conditions, in cold weather should be almost a red. A. M. Pierson, Inc., have a large quantity planted and they are in all stages and show in each and every case a tendency to get right to work and grow. I hope it will turn out as well as it appeared to me on my first inspection.

Mr. C. F. Curtis of Plantsville, Conn., is one of the Cyclamen growers of the east who needs to take his hat off to no one. He has several houses filled with as near perfect stock as can be found, and what pleased me particularly was the medium size plants in five inch and six inch in such wonderful condition. Foliage way down to the pot; heavy built up plants with crowns that show fine promise for later on.

He also has four inch stock in remarkably fine shape, and says that he has no fear that he will not have them in bloom for the holidays in five inch, which is an ideal selling size and no doubt as profitable, if not more so, than the larger sizes.

It would not be fair to mention Connecticut Cyclamen growers and not speak of Lindner, the florist, of Hartford. Mr. Lindner can't really be called a Cyclamen specialist, because he grows a general line of stock, but it will take a good specialist to beat him on Cyclamen.

The larger part of the planting of field grown carnations has been completed, and stock in general is in very fine shape. During July and the first part of August there was quite a rush for field grown plants, but this has let up some at this time, as planting is pretty well along. However, excepting for a few varieties, there is no great surplus around New England. Ward and Matchless are in good supply, but such varieties as Aviator, Benora, Pink Delight, White Delight, Rosalia and Morning Glow are pretty well taken up. New England should turn out a mighty handsome lot of carnation flowers this season from present indications. There is less stem rot showing up in the houses than was feared earlier in the season. The plants all the way through have a fine start, are well built up and should throw heavy crops. If business conditions continue normal the carnation man faces a good winter.

Rowayton Greenhouses in Connecticut are in excellent shape. House after house of roses are coming along in all different stages for the coming season.

It is quite a surprise to one making a first visit to see the quantity of Francis Scott Key grown at this place, but the way this rose is handled there is no doubt in my mind that it is one of their best varieties.

Two of the largest houses are being gone over and glazed new entirely, painted inside and out, making them like new. From one end of the place to the other the stock in all varieties was in fine shape.

A large part of the florists I have talked with evidently do not take kindly to the high price on Paper Whites. One after the other mentions cancelling either the entire order or a part of it. I cannot agree with those who say that Paper Whites can be brought up in price just the same as anything else, and brought up sufficiently high to stand for the price put onto them this season. There may be a shortage of Paper Whites, but it seems peculiar that plenty are available at high prices.

The Unique Flower Shop of W. F. Korb, Louisville Ky.

In spite of the fact that various other greens are being introduced, Galax leaves continue to hold their popularity. Nothing has been found as yet that will really take their place. Their rich bronze color, unique shape and long pliant stems combined with their cheapness make them indispensable for florists' work. Mr. E. C. Robbins, of Pineola, Avery Co., N. C., who is one of the oldest men in the evergreen business, having had thirty years' experience growing and handling native ornamentals, reports that the season has been very favorable to this work, and that not only Galax but all classes of evergreens are in good shape, with the quantities sufficiently abundant so that prices will not be increased over those of last year. He is already shipping green Galax leaves; bronze leaves will come in about Novemebr 1.

Besides the Galax leaves he is featuring Leucothoe sprays, as he finds that they are giving remarkable satisfaction in high class decorative work. They are particularly available for garlands or wreaths as they grow naturally in a partial curve. Because they are very long they are easy and inexpensive to handle. They, too, are a deep green at this season, but will take on a bronze tint about the first of November.

Apparently there is going to be a great call for Christmas and holiday evergreens this year, according to Mr. Robbins, who says that orders are already coming in for balsam, fir, ground pine and American holly. There is also a call, he says, for balsam needles and twigs, which are sold in clipped form and used in making up pillows. Last year there was a shortage of well berried holly, but this year, according to Mr. Robbins, there will be an abundance of holly well covered with berries. Mr. Robbins thinks that it would be to the benefit of florists to point out some of the advantages of evergreens for home use at Christmas and holidays. This applies particularly to Galax and Leucothoe sprays. They keep a very long time, even in warm rooms, if the stems rest in water, while their heavy texture and fine colors add much to their value.

There will be late deliveries of all the Dutch bulbs this year. This is because of the wet summer in Holland, resulting in the fact that the bulbs have dried off very slowly. It is impossible to store the bulbs as rapidly as digging could be carried on, so that several growers had to stop lifting because of the lack of room. This is the explanation of the reason that the bulbs are coming in several weeks later than is usually the case.

**Robert Cameron**
President of the National Association of Gardeners

William L. Korb, of Louisville, Ky., has recently completed one of the most unique flower shops to be found anywhere in the country. It is built of logs, boulders and cement, and is rustic in its details. Mr. Korb says it is the first building of the kind ever erected for a florist salesroom, and probably he is right. All the logs have a brown hue, while the cement between them is black. This cement is inlaid with moss green boulders, giving a very unusual effect. All the signs are rustic in character, and are covered with silver paint. The shingles on the roof of the building are green and yellow, laid in zigzag design. Atop the house is a bird box containing fifteen compartments, and designed to match the building. The chimney is made of large boulders, and there are two boulder bases in front of the building which hold tall vases.

The inside of the shop is as notable as the exterior. Here, too, the rustic note has been kept throughout. Much use has been made of bark from beech, birch, walnut, red oak and sassafras trees. The icebox in particular attracts attention. It is very unusual, both in design and finish, being made of hollow tile covered with cement with a stucco surface. The tile itself is stuffed with sawdust for greater installation. The top of the work table is made of cement, while the base is covered with small gravel and striped with lime and tile. The furniture throughout is of rustic design. The color scheme inside the building is gray, brown and rustic green. Adjoining the building is a small greenhouse of an appropriate design.

It is interesting to learn from Mr. Korb that the building was designed and planned in every way by himself, and a large part of the work on the interior was executed by him. All in all, he has a very unique and interesting place of business.

Mr. H. E. Meader of Dover, N. H., florist and gladiolus specialist, has originated a method of handling cut glads which is well worth the consideration of other growers. As is well known, the price usually starts off at six or eight cents and then drops to four and sometimes almost to the fading point during the midsummer, coming back again to six or eight in the fall. Mr. Meader makes a contract with florists in his vicinity to furnish them a given number of spikes each week at a flat rate of four cents apiece. It is then up to him to have a supply without fail during the early and late part of the season. But on the other hand he doesn't have to worry about the glut during mid-season. He knows just how many flowers he will have to dispose of each week and just what his returns will be. The florists, on their part, know exactly what they are to pay and just how many blooms will arrive at their store each week. It is an arrangement which is working out well for both the grower and his customers.

Mr. John Maloney, the florist of Lowell, had a unique experience not long ago when a customer requested that he mail a wreath to be placed on a grave in County Fermanagh, Ireland. Mr. Maloney took over the order and shipped the wreath, which was, of course, an artificial wreath, a distance of three thousand miles.

## A NEW ORGANIZATION OF NEW ENGLAND FLORISTS

At a recent meeting in Randolph, Vt., the Northern New England Association of Florists was organized with a membership of 35. The following officers were elected: President, Harry M. Totman, Randolph, Vt.; Vice-President, Carl S. Hopkins, Brattleboro, Vt.; Secretary-Treasurer, George A. Halladay, Bellows Falls, Vt. The Executive Committee consists of S. B. Emerson, Lebanon, N. H.; G. E. Hunt, Rutland, Vt.; and Mr. Gove, Burlington, Vt. It was voted to hold the annual meeting in Brattleboro, Vt., on the last Wednesday in August, 1923.

# CONVENTION OF GARDENERS

## Full Program for the Meetings of the National Association In Boston, September 12-15

Elaborate preparations have been made for the annual convention of the National Association of Gardeners, opening in Boston, September 12, and lasting until the 15th. The first two days will be given over to business, and the last two days devoted to sight seeing. All the business sessions will be held at Horticultural Hall, corner of Massachusetts Ave. and Huntington Ave. Convention headquarters will be at Hotel Brunswick, on Boylston St., just below Copley Square. The banquet will be held at this hotel, Wednesday evening. The full program for the four days follows:

### Tuesday, September 12

11 A. M.—Executive meeting of trustees and directors at Hotel Brunswick.

2 P. M.—Opening of Convention at Horticultural Hall.

Address of Welcome on behalf of the City of Boston. Hon. James M. Curley.

Response—William Gray, Bellevue Ave., Newport, R. I.

President's Address—Robert Cameron, Ipswich, Mass.

Address on behalf of the Commonwealth of Massachusetts—A. W. Gilbert, Commissioner of Agriculture.

Address on behalf of the Massachusetts Horticultural Society—Mr. A. C. Burrage.

Address on behalf of the Garden Club of America.—Subject, The Training of Boys at Hillcrest Gardens. Miss Marian Roby Case, Weston, Mass.

Discussion.

8 P. M.—Reception to all visitors at Horticultural Hall. Illustrated lecture on "The Arnold Arboretum." Edward I. Farrington, Editor of Horticulture, Boston.

### Wednesday, September 13

9 A. M.—Secretary's Report

Secretary's Financial Report.

Treasurer's Reports.

Committee Reports and Discussion thereon.

Resolutions.

Nomination of officers.

Consideration of next meeting place.

New business.

Adjournment for lunch

2 P. M.—Amendments to the By-Laws.

1. Relative to the Reserve Fund of N. A. G.

2. Relative to By-Laws for Local Branches.

Discussion on the Two-Year Course for Gardeners at the Massachusetts Agricultural College, opening Sept. 27, 1922.

Election of Officers.

Unfinished business.

7 P. M.—Annual banquet, Hotel Brunswick.

Judge Charles W. Hoitt, Toastmaster.

### Thursday, September 14

9 A. M. Sharp; from Hotel Brunswick. Automobile trip through the North Shore of Massachusetts, stopping at estates of Mrs. Gardner M. Lane, Manchester; Mrs. William H. Moore and Mrs. Henry C. Frick, Prides Crossing; Mr. Albert C. Burrage, Beverly Farms; Mr. and Mrs. R. T. Crane, in Ipswich; Mr. Thomas E. Proctor, Topsfield, and Mr. B. Hammond Tracy, Wenham. A New England clambake will be served at Castle Hill Farm, Ipswich.

### Friday, September 15

9 A. M.—Automobiles will start from Hotel Brunswick for a visit to Cambridge, Lexington, Concord and Wellesley, where the Walter Hunnewell estate, and the estate of Mr. H. S. Hunnewell will be inspected. Lunch will be served on the latter estate. Later visitors will be taken for drive through Franklin Park, the Arnold Arboretum, and the estates in Brookline of Mrs. E. D. Brandegee, Mrs. C. G. Weld, Professor C. Sargent, and Mrs. Larz Anderson.

### The Ladies

The ladies attending the convention will be served a tea at Horticultural Hall at 4.00 o'clock Tuesday afternoon. In the evening they will have a theatre party. Wednesday will be given over to sight seeing around Boston.

### Local Convention Committee

The plans for the convention are in the hands of the following committees, any of whose members may be consulted for information:

General Chairman of Committee—William N. Craig.

Banquet and Entertainment—A. K. Rogers, Chairman; James Methven, Stewart A. Forks, Henry Stewart, A. P. Dewar, L. B. Whyte, Gordon P. Stewart, John G. Duguid, William Till, Percival C. Veinot, James Donald.

Program—P. W. Burke, Chairman; W. D. Nickerson, John Morris, W. D. Coots, T. H. Westwood, Peter Arnott, Donald McKenzie.

Finance—W. J. Kennedy, Chairman; Frank Murray, Peter M. Miller, William Anderson, Geo. F. Stewart, E. H. Wetterlow, H. W. Clarke, W. R. Thornhill, J. L. Russell.

Ladies' Reception—Mrs. B. Hammond Tracy, Chairman; Mrs. W. N. Craig, Mrs. Wm. Anderson, Mrs. Duncan Finlayson, Mrs. Geo. F. Stewart, Mrs. A. K. Rogers.

Transportation—Walter H. Golby, Chairman; Julius Heurlin, Duncan Finlayson, A. E. Parsons, W. C. Rust, James Marlborough, B. Hammond Tracy, James Wheeler.

Publicity—William N. Craig, Chairman; Gustave Thommen, E. I. Farrington.

**John Barnet**
Vice President of the National Association of Gardeners

**W. N. Craig**
Chairman of the Committee on Arrangements

# NOTABLE GARDENS AROUND BOSTON

There are many notable gardens in and around Boston, some of which at least will be viewed by the visitors at the convention this week.

Weld, the estate of Larz Anderson in Brookline, is probably the most elaborate formal garden in New England. It contains many ornamental features and includes a small Japanese garden. Duncan Finlayson, gardener.

The estate of Mrs. C. G. Weld, Brookline, has fine sweeps of lawn and excellent border plantings. William C. Rust, gardener.

Holm Lea, Brookline, the estate of Prof. C. S. Sargent, director of the Arnold Arboretum in Jamaica Plain, is famous for its rare trees and shrubs, especially its rhododendrons and lilacs. Charles Sanders, gardener.

The Loren D. Towle estate, Newton, now under construction, contains the largest range of private greenhouses in New England. This will be one of the finest estates in the east. Harold Graham, of Olmstead Bros., in charge.

Faulkner Farm, Brookline, the estate of E. D. Brandegee, contains a formal garden with a pool, also rock gardens and much general planting. W. N. Craig, gardener.

The E. B. Dane estate, Brookline, is notable for its color schemes formed largely with bedding plants, and for its pool. It also has a very complete collection of orchids. George M. Barrie, gardener.

The Charles Harding estate, Dedham, contains a formal garden with steps descending to the lake, also a rose garden. John Ruddiman, gardener.

The Walter Hunnewell estate, Wellesley, is famous especially for its rare trees and shrubs, and for its topiary garden on the banks of a lake. It is here that hardy rhododendrons are said to have been first used for general planting. T. D. Hatfield, gardener.

The Henry S. Hunnewell estate, Wellesley, contains 650 acres, with an exceptionally fine collection of Crataegus and ornamental crabapples. It also contains a rose garden laid out by Mrs. Foote of Marblehead. J. G. Duguid, gardener.

Castle Hill, the estate of R. T. Crane, Jr., Ipswich, is one of the largest estates on the North Shore, containing 2500 acres. It has a beautiful enclosed sunken garden, a rose garden, a maze, and a large greenhouse. Robert Cameron, gardener.

The Lester Leland estate, Beverly Farms, is notable for its greenhouse material and especially its begonias. Eric H. Wetterlow, gardener.

The Mrs. Henry C. Frick estate, Pride's Crossing, contains extensive

A Corner of the Garden at Faulkner Farm, Brookline, W. N. Craig, Supt.

rock gardens. Thomas Fletcher, gardener.

The estate of Mrs. R. D. Evans, Manchester, is notable for the beauty of its hardy border arrangement and its secluded nooks. James George, gardener.

The Judge William H. Moore estate at Pride's has beautiful lawns and well kept gardens. A. E. T. Rogers, gardener.

Orchidvale, the estate of A. C. Burrage at Beverly Farms, is noted for its remarkable collection of orchids contained in a long range of especially equipped houses. Fred C. Pocock, gardener.

The James L. Lancashire estate, at Manchester, contains a garden that is considered to be one of the most tastefully arranged and skillfully planted on the North Shore.

The McQuesten estate, Marblehead Neck, contains a formal garden in the midst of the summer colony.

The Bayard Thayer estate at Lancaster is among the most extensive in New England, with a remarkable collection of lilacs, rhododendrons and rare trees, and a very extensive planting of heather. William Anderson, gardener.

The Lyman estate, Waltham, contains the oldest greenhouse in the country, built 130 years ago, and more modern houses with many rare plants. G. F. Stewart, gardener.

Cedar Hill Farm, Waltham, is notable for its large maze patterned after the famous maze at Hampton Court, England. Henry Stewart, gardener.

Langwater, the John S. Ames estate at North Easton, has fine lawns, a large lake and an unusually beautiful spring garden.

The Oliver Ames estate, North Easton, has a particularly good shrubbery planting. Edward Parker, gardener.

Mrs. F. L. Ames estate, North Easton, has 650 acres, with a fine display of evergreens and an attractive wall garden. William Hodges, gardener.

The Winthrop Ames estate, North Easton, has a well designed formal garden and much general planting. Daniel White, gardener.

The Galen Stone estate, Marion, has an elaborate formal garden, much general planting and large greenhouses. A. Griffin, gardener.

The John P. Gardner estate, Warren Street, Brookline, has a well designed and well kept Italian garden. William Fletcher, gardener.

The E. B. Webster estate, Chestnut Hill, is famous for its greenhouses in which especially good begonias and many rare plants are produced. Peter Arnott, gardener.

# King GREENHOUSES

The selection of a greenhouse is not a difficult problem if you have the facts about King Greenhouses. Their superior design, construction and growing qualities—the ease with which they are erected and maintained, and their long life make them the houses which will pay you a bigger dividend on your investment.

There are various bulletins telling about King semi-iron, pipe iron frame and steel frame houses as well as greenhouse supplies. Write for the bulletins, which will be sent without cost or obligation, and have all the facts. You'll decide on the King.

*When you think of good greenhouses, think of KING*

Glen Cove, L. I., October 18, 1921.

ANDREW WILSON, Inc.,
Springfield, N. J.

Gentlemen:

Having used your Plant Spray for the last four years, I have now cleaned my Box trees of Box mite after all other remedies had failed, and am now using it for greenhouse and outdoor spraying.

You can use this letter any way you think fit for the benefit of my fellow gardeners.

Very truly yours,
J. W. EVERITT.
Supt. J. T. Pratt Est.

**Training in Horticulture** Prof. Clarke L. Thayer, of the Massachusetts Agricultural College at Amherst, presented some new and worthwhile ideas to the members of the S. A. F. at their convention in Kansas City. Prof. Thayer has watched the growth of horticultural and floricultural training in this country, and perhaps is as well posted on the general subject as any man living.

Although the fact has been published in Horticulture and other papers, many of the men present at the convention did not realize that the Massachusetts Agricultural College was starting this fall a regular two-year course for gardeners, and were much interested by the details as presented by Prof. Thayer.

The program now being entered upon provides first for six months of resident study at the college. The classes will close the last week in March, after which the students will go to various commercial establishments and private estates for summer practice work. This apprenticeship will be supervised by a committee representing jointly the Massachusetts Agricultural College and the National Association of Gardeners.

At the end of the summer the students will return to the college for an additional period of nine months' study. They will thus complete this part of the course in June, and receive a certificate from the college. Then they will enter upon an apprenticeship of two years, to be arranged and supervised by the National Association of Gardeners, after which they will be examined and the successful receive a diploma from this association.

Special consideration will be given pupils coming upon the recommendation of the National Association of Gardeners, and this association will work very closely with the college in an attempt to make the new course a great success and a forerunner of a general education of gardeners throughout the country.

Prof. Thayer, in his talk, discussed the possibility of a similar course for florists, and emphasized the fact that in all such instructions there should be a broad foundation of practical knowledge. He said he was deeply pleased when he heard the superintendent of a large estate make the statement that Latin should be included in a floricultural course of study. Such a statement might be scoffed at in some quarters and yet without question Latin would be of the greatest value in learning scientific plant names, with which every well educated gardener and florist must necessarily be familiar.

We think that a gardener or a florist ought to know something at least about physics, agricultural economics, rural sociology, history, entomology and drawing. As a matter of course he should have a good ground work in English, and give considerable time to the study of botany. In his course, too, there should come some consideration of the methods by which the material used in his work is transported, the uses of cold storage and possibly advertising.

Evidently from what Prof. Thayer says the Massachusetts College is forming all of its classes on broad and liberal lines, and we believe that it is right in doing so. The college graduate should receive not only a thorough training in horticulture or floriculture, but should also gain a more or less general education. With this at his command, he will be better fitted for whatever work he undertakes, and moreover will be able to get a fuller enjoyment out of life than any young man whose mental horizon is restricted.

**Sentiment in Business** It is seldom that a better piece of literature has been presented at any trade convention than the address of Miss M. C. Gunterberg, of Chicago, president of the Ladies' Society of American Florists, at the Society's recent convention. Miss Gunterberg, who is known the country over as a leader in the trade, is evidently as familiar with books and the writings of the masters as she is with roses and cuttings.

Moreover, there was much good common sense in her remarks, and we are particularly pleased at her efforts to stress the unusual opportunity which the florists have for bringing good cheer into countless homes. It would be well if florists would keep in mind the fact that business is not merely a sordid struggle for existence, but an opportunity for helpfulness and the expression of genuine good will. After all, a life is hardly worth while if we pass through it and leave behind us only the reputation for having made a lot of money but few friends.

All florists may not agree with Miss Gunterberg's arguments, but certainly there is a lot of good human nature in her plea to the ladies when she says:

> "So often, there is a surplus of flowers. I beg of you, do not let these flowers wilt or be cast in the discard. Those who are actively engaged in the business of floriculture do not have the time or leisure to see that these flowers are distributed to the best advantage, but I ask of you, whose time is your own, take these flowers to the tenement districts, bring joy to the little tots there, who never see a blade of grass or a green tree. See their eyes sparkle and bring smiles to those baby lips.
>
> "Go to the homes for the aged—some poor soul there, she may be somebody's mother, make her happy. Bring her a plant to care for and watch over. It will give her a new interest in life. And don't forget the old man hobbling along on his stick. So often he is overlooked and forgotten, but, remember, that within that breast there beats a heart as full of emotion as even yours and mine. Make him happy, give him some flowers.
>
> "Go to the hospitals for the ex-service men, those poor boys who sacrificed everything and who now feel that they are forsaken. Bring hope into their hearts, save them from despair. Cast your bread upon the waters, it will return to you a hundred-fold."

# COMMONWEALTH

Brighter and deeper pink than Premier. Almost immune to black spot and mildew. A rose you can flower for twelve months per year. **A forcing rose** of the highest quality.

We shall disseminate Commonwealth for the Montgomery Company in 1923. Only grafted plants offered.

### AFTERTHOUGHT OF THE KANSAS CITY CONVENTION

Looking back at the Thirty-Eighth Convention of the Society, everybody interested in it has cause for the greatest satisfaction over its successful outcome, and it has gone down into history as one of the best conventions the Society has held.

Especial thanks of our officers and members are due to the chairmen of the different local committees in Kansas City and their capable fellow-workers for their most efficient services, and to the trade in general for their hearty support. The Society's Vice-President, Samuel Murray, Executive Chairman William L. Rock, State Vice-President W. J. Barnes, Chairman of the Transportation Committee Wm. Wade, Chairman of the Entertainment Committee E. A. Humfeld, and Secretary of the Kansas City Florists' Club Glenn K. Parker would appear to have devoted to the Society their entire time for weeks in advance of the Convention and during Convention week, in order that every detail planned should be properly carried out.

Too much praise could hardly be given Frank M. Robinson, Secretary of the Convention Bureau of the Chamber of Commerce, who, though handicapped by two broken legs, sustained in an automobile accident while in St. Louis several weeks ahead of the Convention, insisted upon visiting Convention Hall to see that, in so far as his Bureau was concerned, everything arranged for had been taken care of. He made the Savoy Hotel his headquarters during the three days' sessions, and was continually in touch with the Secretary.

William Symons, who had charge of the Publicity Department of the Convention Bureau, not only took care of the publicity work, but assumed the duties of Mr. Robinson in an executive way, and was present during the whole of the Convention, becoming affectionately known to all of the officials as just plain "Bill" Symons.

The report of the proceedings of the Board of Directors at the Spring meeting, printed and distributed at the Convention, was, as usual, rather voluminous. It has been customary to make this report as brief as possible, while aiming to include all essential details. One particular matter, it would seem, might have been presented a little more fully, and that was in connection with the Publicity Campaign, page 8 of the report. In the discussion noted on that page Mr. Ammann is reported to have stated in effect that the campaign "had a good working capital," while his remarks really implied that the "Society had a good working capital."

In the discussion on "Publicity," which formed an important part of the proceedings, the matter of financial assistance from the Society itself was a feature, and was the subject matter of the paragraph referred to. As a result of this discussion the directors passed a resolution unanimously deciding that in future the expense of the Publicity Campaign be paid from the Society's General Fund and this is really as it should be, for up to the present time the Society has not contributed one dollar of actual cash to the Campaign. It is true that at the St. Louis Convention $5000 was appropriated and at the Detroit Convention another $5000 was voted to the Campaign, but when the Publicity Committee realized that the General Fund was short of cash and could not afford to pay these appropriations, the two amounts, which had been provided and partly used, were returned to the Treasury of the Society.

While the Society has not subscribed anything toward the Publicity Campaign, an amount equaling $5,000 has been contributed yearly from the funds raised or subscribed by the trade to go toward the maintenance of the Administration Office from which the Campaign was promoted and is conducted. This matter was taken into consideration by the Budget Committee which consisted of Herman P. Knoble, Paul Kling-peru and Treasurer J. Heinl, and the estimated budget of receipts and disbursements for the current year, which was approved by the Convention, is published in Kansas City, provided that the new arrangement as to expense should prevail. The details of the budget as submitted by the committee were as follow:

| Approximate Disbursements for the Year | |
|---|---|
| Traveling Expense of Officials | $ 650.00 |
| Printing and Stationery | 1,000.00 |
| Officers' Salaries | 5,500.00 |
| Clerical Assistance | 2,500.00 |
| Expenses for State Vice-Presidents | 500.00 |
| Light, Heat, Telephone and Telegraph | 300.00 |
| Membership Drive | 500.00 |
| Office Expenses | 500.00 |
| Postage | 500.00 |
| Furniture & Fixture | 300.00 |
| Rent | 780.00 |
| Tariff and Legislation | 200.00 |
| Miscellaneous | 750.00 |
| Making a total of | $14,220.00 |

| And the estimated annual income was based on the following: | |
|---|---|
| Annual Dues | $ 7,000.00 |
| Initiation, new members | 2,500.00 |
| Income from Investments | 2,400.00 |
| Income from Convention | 5,000.00 |
| | $16,900.00 |

The expenses of the Publicity Campaign are thus included, and the appropriation of $2000 (equally as liable a) coming from the funds of the Publicity Campaign are not included in these figures. Indications are that while the expenses of the Society will not exceed the amount estimated, the receipts will undoubtedly be more than has been suggested. The $2500 appropriation voted by the Convention in Kansas City to the Publicity Campaign will be used entirely for national advertising.

#### The Next Convention

The next Convention, which will be held in Hartford, Conn., comes later in the month than did the Kansas City meeting. The dates are August 21, 22 and 23. At this early date prospective exhibitors in the trade section are enquiring for particulars as to the hall and accommodations, which indicates that the 1923 Convention will be thoroughly in keeping with the exhibitions of previous years. Wallace R. Pierson, Cromwell, vice-president elect, is already busy on preliminary preparations, and it goes without saying that the Hartford Convention is likely to break all records for interest and attendance.

JOHN YOUNG,
Secretary.

### THE AMERICAN ROSE SOCIETY

The following rose has been offered for registration and passed upon by the Registration Committee:

**Name:** HUMBOLDT (instead of Eureka as per notice of July 22, 1922). **Class:** Hybrid Tea. **Parentage of rose:** Unnamed seedling X Ophelia. **Description: Habit of plant:** Erect growth throwing long straight stems. Character of foliage: Somewhat similar to Ophelia. Freedom of growth and hardiness: Very free and hardy. Color: Bright rose pink. Form: Long pointed bud—outside petals recurved. Fragrance and bud—Slightly fragrant. Petalage—Medium full.

Freedom of bloom and lasting quality: Remarkably free bloomer. The rose is similar to Chatenay except darker in color and superior for the following reasons: Very much stronger grower than Chatenay.

Signed by David S. Ward
For Cottage Gardens Co.

If no objection to such registration is filed with the Secretary of the Society within three weeks after this publication, the registration will become permanent.

JOHN C. WISTER, Secretary.
606 Finance Building,
Philadelphia, Pa.

Dignified, Exclusive Profession not overrun with competitors. Crowded with opportunity for money-making and big fees. $5,000 to $10,000 incomes attained by experts. Easy to master under our correspondence methods. Diploma awarded. We assist students and graduates in getting started and developing their businesses. Established 1906. Write for information; it will open your eyes. Do it today.

American Landscape School, 19-H Newark, New York

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

I was much interested in the advertising copy of the Hitchings Greenhouse Co, which appears on the back cover of Horticulture this week, because of its reference to the old greenhouses on the Lyman estate at Waltham and the Butterworth property in South Framingham. I believe that not a few of the visiting gardeners attending the convention will be interested to make a trip to one or both of the estates where these ancient greenhouses are standing.

Of course the one at Waltham is the best known. It was built 130 years ago, and in spite of that fact is still in use. The present superintendent of the estate, Mr. G. F. Stewart, keeps it filled with plants a large part of the season. Naturally the house is low and rather awkward to work in. Running three-quarters of its length is a masonry flue leading to a chimney at one end of the house, and having its beginning in a sort of crude fireplace which was designed for burning large chunks of wood. The house was kept warm by the heat which was radiated from this flue. The fireplace arrangement has been adapted to the burning of coal now.

Although not so old, one of the main greenhouses on the estate antedates the introduction of steam and hot water. It is a much larger house, and was heated originally by a long series of flues wtih nearly a dozen firepots opening on a sunken corridor. This house will be a revelation to the younger generation of garden makers, and it is easy to believe that the gardener in the old days had his work cut out for him during long cold winters. It must have been no small task to keep these fireboxes filled with wood, although it is stated that the heat would remain for a long time after the fires had gone out. The houses are used for growing grapes, and a modern heating system has been introduced.

One feels now when going down through the sunken corridor and viewing the ancient fireboxes much as a visitor must feel when he enters the catacombs in Rome.

---

While the old greenhouses on the Butterworth place are less extensive, they are no less interesting in a way. The house is in the form of a lean-to against the residence of Mr J. T. Butterworth, who as everybody knows is a famous orchid grower with some of the most modern buildings to be found on any florist establishment and boasting a new and attractive show room recently completed.

A particularly interesting point about the ancient greenhouse is the fact that it was built for housing the first Japanese chrysanthemums brought to this country. The property was then owned by the Alpheus Hardy family, which was engaged in the shipping trade. Either seeds or plants were brought over from Japan and grown in this house. When the flowers were shown in Horticultural Hall in Boston they aroused tremendous interest, and the importation of the plants was soon taken up by other people. It is interesting to note in this connection that the Hardy family also brought over a young Japanese who was educated in this country, being among the earliest Japanese students.

---

Apparently the popularity of Phlox extends to almost all parts of the country. At least it is being grown widely in many sections. Mr. Willis E. Fryer, of Mantorville, Minn., has a particularly good collection. It is noteworthy, though, that Mr. Fryer does not advise planting in the fall, at least in his section. He says that sometimes every plant will live, while again many of them are winter killed.

Although he has perhaps the largest acreage in the west, he has picked out a few of those which do the best in his locality. It will be interesting to compare them with eastern favorites. Included in the list are President Taft, a light pink; R. P. Struthers, rosy-red with a crimson eye; W. J. Fryer, pink, shaded salmon, with a bright red eye; Dr. Christopher Graham, a curious variegated or mottled pink; Lothair, salmon-red with a dark carmine eye and growing very tall, Professor Cady, light red with a deep red eye; Reverend Spicer, bright pink with a darker eye; Mrs W. B. Fryer, a vigorous white; Dr. Charles H. Mayo, white with a red eye; and Edith Mayo, medium sized with a faint eye.

Mr. Fryer calls Dr. Mayo the best white phlox with an eye that he has ever seen. It grows very tall and has pyramidal panacles. Edith Mayo has a different form of growth from any other phlox, being in the form of a half sphere. This variety is not yet being offered for sale, but promises well. Mr. Fryer recommends Mrs. Mellinger, a rosy red with a darker eye, for sections where there is little rain, saying that it will endure more drought than any other phlox in existence.

Field of Phlox on the Nursery of Willis E. Fryer, Mantorville, Minn.

## METHVEN SUCCEEDS CRAIG

It is understood that Mr. James Methven, now in charge of the Coomly estate in Milton, is to succeed W. N. Craig as superintendent of Faulkner Farm in Brookline, when Mr. Craig leaves October 1 to go onto his own place at South Weymouth. Mr. Methven is a very well known gardener and a former president of the Gardeners' and Florists' Club of Boston.

## E. H. WILSON RETURNS

### Arnold Arboretum Plant Hunter Back From Long Trip

Scores of books and hundreds of pamphlets have been added to the huge collection of horticultural literature at the Arnold Arboretum, connected with the Bussey Institute of Harvard University, as a result of the two years' trip from which the assistant director, E. H. Wilson, has just returned. The purpose of Mr. Wilson's travels, which took him to many foreign lands, including Australia, New Zealand, Tasmania, Java, India and South Africa, was to establish more intimate connections between the Arboretum and other great gardens and arboretums of the world, as well as to add to the library of the institution and to increase its great collection of photographs.

#### Rare Specimens Lost

Mr. Wilson carried his camera everywhere he went, and has brought back dozens of photographs of rare trees and shrubs. He experienced one great disappointment in this connection. While he was in Australia, he made two large shipments of photograph plates and herbarium specimens. They were expected to go on different boats, but as it happened both found their way on board the American ship Canastota, which was never heard from after it sailed from Melbourne.

Mr. Wilson went to Australia by way of England, and stopped in that country on his way back, also visiting France. Many pictures were made in the forests of Australia which were found particularly interesting. These forests consist largely of eucalyptus trees, valuable for many purposes.

At Melbourne and Sidney magnificent public gardens were found, as well as private gardens without number. It is an interesting fact, according to Mr. Wilson, that the flowers to be seen in Australia and other countries settled largely by English-speaking people are mostly the same flowers which are to be seen in the home land. While some of the native flowers are grown, many of them are looked upon as too common for cultivation in the garden, but the hollyhocks, delphinium and the Canterbury bells of Europe and America have been imported in great numbers and are grown everywhere.

#### Gladiolus Less Popular

For a time, the gladiolus had a great wave of popularity in Australia, but now Mr. Wilson found that its popularity is waning. Dahlias have supplanted it to a large extent in the affections of the people. Roses, too, have a prominent place in all the gardens. While the newer varieties are a year or two in reaching Australia, growers are keen about keeping up-to-date.

# SWEET PEA SEED

During the past season we have made a special study of Sweet Peas and have selected varieties best for the commercial grower that the market affords, and we have every reason to believe that our seed is as true to name, color and type as any offered.

**WHITES**

**Early Sankey, Bridal Veil, White Orchid, Venus, Mrs. Spanolin,** oz., 75c; ¼ lb., $2.50; lb., $8.50.

**Snowstorm,** oz., $1.00; ¼ lb., $3.00; lb., $10.00.

**PINKS**

**Early Helen Lewis, Rising Sun, Miss Louise Gude, Mrs. Skaach, Miss Fabing, Loveliness, Daybreak, Yarrawa, Hercules, Enchantress, Rosebud, Splendor,** oz. 75c; ¼ lb., $2.50; lb., $8.50.

**Early Gem, Sunburst, Rose Queen, Empress, Pink Beauty,** oz., $1.00; ¼ lb., $3.00; lb., $10.00.

**SALMON and ORANGE**

**Glitters, Dazzler, Orange Beauty,** oz., 75c; ¼ lb., $2.50; lb., $8.50.

PHILADELPHIA

## NEW GREENHOUSES

Carver & Sampson, the dahlia and gladiolus growers of Brockton, Mass., are erecting a new greenhouse which they will use for propagating dahlias from cuttings. This firm has expanded rapidly the past year, and has been very successful at the shows.

Mr. Geo. L. Fish, of Billerica, who has made a wide reputation as a dahlia hybridizer, is just finishing a new greenhouse which he will use in propagating dahlias from cuttings in the spring, as well as for the growing of other plants. The house is 55 feet x 16 feet 9 inches, and is of A. T. Stearns construction. Mr. Fish has also constructed a concrete cellar for the storage of bulbs.

The new greenhouse of Edward Winkler at Wakefield is about completed. This is an iron frame house, 250 x 40 feet, of the most modern construction. Mr. Winkler, who is famous as a carnation grower, and the originator of Morning Glow, is already sending Matchless from this season's plantings to the Boston market.

A new greenhouse is to be erected at Wellesley College. It will be a Lord & Burnham house of the latest design.

## NEWPORT ESTATE SOLD

It is just announced that the famous Leeds estate at Newport has been sold to James B. Duke, of Somerville, N. J., the tobacco king. It is understood that William Gray, the superintendent and secretary of the American Sweet Pea Society, will remain as superintendent.

According to Henry M. Robinson, of Boston, who handles vast quantities of ferns, the new crop from southern Vermont has been badly damaged by worms.

Our grades are right and we are prepared to handle your orders as they should be handled. Write for prices today. Watch for our Wholesale Bulletin out about September fifteenth.

**IT'S YOUR FAULT IF YOU ARE NOT OUR SATISFIED CUSTOMER**

# Notice to Wholesale Ornamental Planters and Dealers

HAVING had thirty years experience growing and handling Native Ornamentals, my facilities and supply are unequalled, and a trial order will prove convincing. ERICACEOUS Plants my specialty, in both Nursery Grown and X selected collected stock for all requirements. My superior packing insures delivery in good condition to all parts and grading always up to highest standard in quality.

Before you buy any NATIVE **Azaleas, Ilex, Oxydendrum, Vacciniums, Viburnums, Zanthorrhiza, Abies, Kalamis, Leiophyllums, Leucothoe, Andromedas, Rhododendrons, Thuyas, Hemlocks, Galax, Shortia Ferns, Orchids, Dicentras, Liliums, Trilliums, Iris, Golden Seal, Ginseng, Polygonatums, Sanguinaria, Violets** and hundreds of others, get my prices. Send complete list of your needs in my line and lowest prices will be promptly quoted, consistent with the very best material and service. Sixty carloads furnished the trade last season (mostly Broad-Leaved Evergreens) with complete satisfaction.

It will be to your advantage to send for price lists and get acquainted with my organization for quality and quantity. Your correspondence is solicited and all orders will be handled to your entire satisfaction. Ask about unusual Decorative Evergreens. Rare and beautiful.

***Address...*** **E. C ROBBINS**

PINEOLA, Avery County, NORTH CAROLINA

# The Gladiolus

Mr. S. E. Spencer, proprietor of Brookland Gardens, in Woburn, Mass., says that this has been an excellent season for gladioli, in spite of the rains which caused some malformation of the spikes. Mr. Spencer, who knows the business from a to z, won many prizes at the recent show in Boston, where he had an unusually find exhibit.

Mr. Spencer is one of the growers who believes in helping his customers to be as successful as possible. For that reason he sends them some valuable instructions for handling the bulbs which he sells. He calls attention to the fact that a young bulb of medium size is most valuable, while old bulbs of any size are practically worthless. He advises planting any time from April 20 to June 15, and in his instructions says:

"Any time from April 20th to June 15th, plant the bulbs right side up in single or double rows in deep furrows, leaving three inches space between the bulbs.

"Do not plant in a shady location and do not allow fresh stable manure in contact wtih the bulbs. A sandy loam is ideal. Plant deep. Three to four inches of soil over the bulbs will keep them cool and moist and help to hold the stalks erect without the use of stakes.

"If the spike is wanted for market or indoor use cut it off eight or ten inches from the ground, the morning after the first bud opens."

In regard to digging and storing the bulbs he writes:

"From the first to the middle of October in this locality is a good time to dig the bulbs, cutting off the old stalk and after drying out pull off the old corm with the roots and store in shallow boxes. If kept too warm or too damp they sprout in storage. 40 degrees to 45 degrees is best."

## IRIS AND PEONIES

Having a large stock of the following Iris will quote special prices for early delivery as I wish to clear the ground: **Arnols, Brooklyn, Darius, Dr. Bernice, Exquisite, Gypsy Queen, Halfdan, Helge, Ingeborg, Jacqueminot, Liabaud, Lord Salisbury, Mme. Chereau, Mithras, Mrs. H. Darwin, Nibelungen, Princess of Teck, Queen of May, Rhein Nixe, Rose Unique, Shakespeare, Sherwin Wright, Walhalla, Walneriana, Ven Geerti, Hector.**

Ask for price list and see what my customers say about the service they receive. Thank you.

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

## COCOA SHELLS FOR FERTILIZER

On a recent visit to F. O. and F. F. Shepardson, the gladiolus growers in Mansfield, I was interested to notice boxes of cocoa shells. Of course I inquired what these cocoa shells were used for, and was informed that they were considered valuable as a fertilizer. They are obtained from the Lowney cocoa factory and their value was first demonstrated on the Lowney farms, where the superintendent grew excellent crops on ground enriched with cocoa shells. These shells are especially strong in potash.

The Shepardsons are planning to put on a heavy dressing of cocoa shells for next season, possibly using ten tons to the acre. It seems to me that by-products of this kind might be used to advantage by florists as a mulch. Doubtless they would retain the moisture in the ground and do away with the need of considerable cultivation, while eventually they can be dug in and made to serve as fertilizer.

# George Watson's Corner

"You in your small corner and me in mine."

All the folks from these parts seem to be well pleased after their return home from the great convention in the wild and woolly. But we hardly expected ever to see Miss Gairis again. Thought sure some cowboy would grab her. Maybe Kansas City isn't quite so wild as some of us Easterners think it is.

A. E. Outerbridge of Bermuda, the great grower of Easter lilies in that island, was a recent and welcome visitor.

The lady who wrote that wonderful piece of poetry, "King John of Barnegat," made us all sit up and take notice. A genius in our midst and we didn't know it. She can make a good speech too, when called on impromptu. Listen to this from Kansas City: Mrs. Pennock was called on and said: "I can only say I appreciate the honors that have come to my good man, and I thank you most heartily." What do you know about that. Is brevity the soul of wit? It sure is!

George G. Edmondson of Dreers is on vacation. He writes from Saratoga Springs, N. Y., under date of August 23rd: "A nice quiet nook in a nice quiet little town. Everything fine." He is on his way to Canada. We are glad to hear from him, and extend our most cordial good wishes. He uses the word "quiet" twice in one sentence, which, with that Thunderbolt six cylinder under him, makes us grin a little.

Alexander Forbes
New President of the American Seed Trade Association

Alexander Forbes, the newly elected president of the American Seed Trade Association, may consider himself highly honored. It isn't everybody who gets into George's Corner" in Horticulture. There must be something wonderful about the man before he can make Old Tornaveen sit up and take notice. Well, in this case, there is. Sandy Forbes was born south of the Grampian hills instead of north of them, where the Forbeses belong; but he has proved himself a true son of the clan, all the same, and a credit to his ancestry, a glory to the seed trade of the old world and the new, and we all take our hats off to him. The A. S. T. A. has honored one who richly deserves the honor, and we all hail him with proud acclaim, and wish him long life and prosperity. A real seedsman in every sense of the word, a gentleman and scholar. "Leave not your caresses for my dead cold brow; the way is long and weary; give them to me now." That's how we all feel towards Alexander!

The big fire at the Whildin Pottery Plant on August 24th has inconvenienced the company, especially in their office department; but orders are being filled in the usual efficient and up-to-date manner from reserve stocks. No hesitation need be felt as to sending in a memo of your wants—same will receive prompt attention; both from their Philadelphia and Long Island headquarters. Temporary of-

fices have been secured, and the old address, 7th and Wharton, will reach them all right. The damage is said to exceed fifty thousand; but fully covered by insurance. Plans for new factory and office buildings are already well under way.

---

John G. Whilldin, the head of the house, is still active, and after fifty years of keen and strenuous work heads the industry of flower pot making in the United States, highly respected by all his competitors.

---

That glorious piece of silver exuberance, the Campbell Cup, which has decorated the sanctum of the Pennock Company Board-Room for the past year, expects to move soon. Just where, has not yet been decided. The Campbell Cup is a little henpecked. It does not move on its own free will and accord. We trust its next home will be as happy and cheerful as its last, where it met the admiring glances of visitors from far and near all over the U. S. and Canada. Also a few from foreign shores. Maybe it will want to come back home again next year. If so, the Pennock boys will surely give it a warm welcome. Meantime that silver service presented to President Pennock in Kansas City should be on view to fill up the gap, instead of being hidden away in the holy backwoods of Lansdowne. Verbum sat sapienti.

---

E. J. Fancourt, secretary of the Pennock Company, is taking a brief vacation with his family at Ocean City, N. J., after three weeks of strenuous work at the Convention in Kansas City; and other Western activities, before and after, covering Chicago, St. Paul and other points. He looks well and hearty for such a hard worker, and he certainly deserves a little breathing spell.

---

Add to the names in the 1922 edition of the Florists' Directory, H. W. Reading & Son, Collingdale, Pa. They have taken over the retail department of W. J. Waters and their headquarters are at Chester Pike and Cherry st. Mr. Waters still continues the growing end of the business on the old location. Mr. Reading, Jr. reports business very satisfactory since they took hold May 1st last.

---

The Henry F. Michell Company will have a grand field day at Andalusia on the 14th inst. This is a free blowout for all their customers and friends, and no special invitation is required. They even furnish free transportation.

*When writing to advertisers kindly mention HORTICULTURE*

The John C. Meyer Thread Co. were the first to introduce the Meyer green Florists' threads that would not fade or change color for Florists' use. Ask any of the wholesale Florists or growers about the Meyer green Florists' thread and they will tell you it is the best., it will go twice as far as ordinary thread and the Florist can do better work with it. Write for prices and samples and we will see that you get the best thread in the world.

The special train leaves Broad street station 12 noon, the 14th. No ticket necessary. Just get aboard. Everybody welcome.

September 11th is the windup of the 4 p. m. closing in the wholesale market here. They go back to the regular 5 p. m. then. The 1 p. m. Saturdays are also wiped out; but the Daylight Saving foolishness keeps up until the first Sunday in October. The Philadelphia authorities decreed our official time one hour ahead of Eastern Standard so we have had to stand for it.

## LOWER FLOWER PRICES

Henry J. Trepel, head of the Trepel Inc., which operates twenty-five flower stores in Brooklyn, was recently quoted in one of the newspapers as saying that wholesale prices of cut flowers are lower than they have been for thirty years and retail prices lower than they have been since before the war.

**IRISES**
FRYER'S NEW IRIS
Mr. P. L. Battey of Glencoe, Ill., who visited me in Iris time wrote me as follows:
"My dear Mr. Fryer:—I was greatly surprised and pleased with your new Iris. From what I had heard and read I imagined they were all, or most all, in the class of yellows and maroons, and all short stemmed varieties, but when I saw the great diversity of colors as well as form, many with fine long stems and conspicuously good foliage, I was greatly impressed with what you have accomplished with your crosses. Your magnificent Mrs. Fryer and Kathryn Fryer are outstanding varieties. C. P. Connell and Lowell are excellent and for flowers and lots of them I have never seen anything equal to your Dr. Andrist, Aunt Rachel, Barton Harrington, W. P. Christman, and many others. Some of the new seedlings which we so thoroughly enjoyed that day are very fine, particularly the beautiful pink one, 'a real honest to goodness pink one too'."
My summer list is now ready and prices on my new Iris have been greatly reduced. Also Delphinium, Peonies, Phlox and other hardy plants.
WILLIS E. FRYER, Mantorville, Minn.

**HEATERS AND BOILERS**—Several large and small heaters and power boilers, second-hand, guaranteed, at very low prices. Call, phone or write TAFT & FISHER, 258 Washington St., Boston, and West Acton, Mass. Phones: Main 8365 and West Acton 70, day or night.

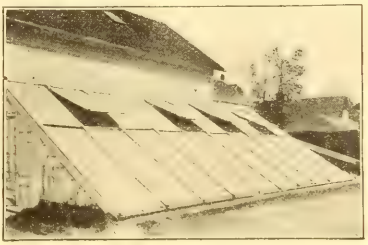
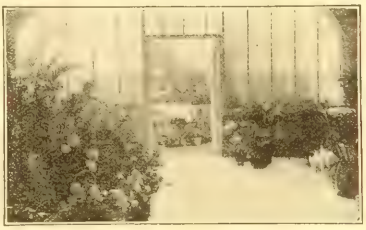
# Butterworth of Framingham, Mass.
## One of Our Oldest and Youngest Customers



None of us here can remember when it was that J. T. Butterworth first became a Hitchings customer. Even MacArthur, our heating expert who has been with us a quarter of a century at least, says Butterworth was buying heating equipment before he came on the scene.

Just this Spring he bought, from a private estate that was being settled, this Hitchings curved end house, and had us take it down and erect it as a show house attached to the flower shop.

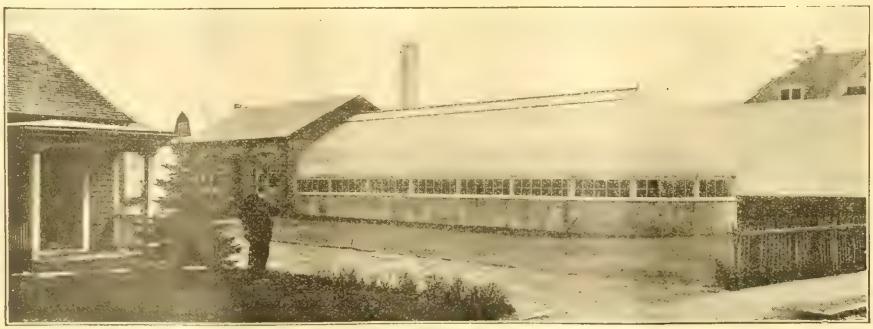


As things now stand, Butterworth himself is doing a lot of smoking his pipe and enjoying life, while his son and daughter do the rustling.

But don't you think for a minute that His Nibbs doesn't know what's going on. Or that as long as he can walk through his orchid houses that he won't do it.

Why, man alive, those orchids are like folks to him. Real folks that converse with him by sign language. If ever you are near Framingham don't miss dropping around to see. A party of four who recently stopped just for a few minutes to look around, staid hour after hour, and then were peeved because the day wasn't longer.

This leanto orchid house is without doubt the oldest greenhouse in the U. S. next to the one on the Lyman Estate at Waltham, Mass. That one was built about 130 years ago. This one 71 years ago.



Strange isn't it that more don't wake up to the sales value of a show house opening off each flower shop. Doesn't take long for them to pay for themselves.

**Hitchings and Company**

## NEW ENGLAND NEWS NOTES

A. E. Stantial, of East Belfast, Me., is planning to erect a small semi-iron frame house of King Construction this fall for growing greenhouse plants.

William Allen, of Newport, R. I., died recently. Mr. Allen was gardener to Dr. Alexander H. Rice, and was very well known in the profession. He gained fame many years ago when he originated the Catherine Duer Dahlia, a dahlia which was used in the form of a wreath at his funeral.

Alfred H. Wingett died recently at his home in Lenox. Mr. Wingett was a widely known private gardener.

Thomas H. Wyle, of Springfield, Mass., won seven prizes at the recent Connecticut State Fair in Hartford.

Winfred Dyke and Frank L. Moulton have opened a flower store at 294 Main St., Wakefield, Mass., where they are to carry a full line of cut flowers and potted plants.

A. F. Hopkins, who has been employed in a bank at Branford, Ct., has now joined his father, I. S. Hopkins, in the florist business.

John A. Hodgdon, doing business as the Hub Nursery & Seed Co. and the Consolidated Nursery & Seed Co., of Saugus, Mass., has filed a petition in bankruptcy, with liabilities of $5,216.00 and assets of $264.00.

As usual at this time of year, Fisher, the Florist, of New London, Ct., has been filling his windows with the products of local gardens. This has proved a very popular feature in the past. One of his last displays has been that of annuals and perennials grown by Harry H. Anderson, of Noank. The exhibition included about thirty varieties.

## BOSTON

Prof. Oakes Ames, of Bussey Institute, who has been working on orchids at Kew Gardens, London, and on the Continent, has returned to Boston. He is preparing a publication on the flora of Central America.

## THE TALK OF THE TRADE

It would appear to me that any grower operating his plant in full this season is going to face a prosperous year. Business is rapidly swinging into a prosperous state and I think the grower who has been scared off too easily is going to see his mistake. Each day soft coal is becoming easier to obtain and that of course will have its indirect effect on the hard coal.

I am frequently asked by growers who take pleasure in turning out an article that they know is all right in every way why so many storemen will cut the grower down to the very last penny on pot ferns and seem pleased to buy a plant that has been bench grown, dug up, made up in the pot with anywhere from two to five crowns and then turned into the store within a few days to be offered as a pot fern.

Pot grown stock properly grown will give the buyer decent results and is worth much more than the so-called pot grown stock which is really bench grown and not established in the pots.

This inferior bench grown stock brings a price not far from the properly grown plants, and there is no comparison in its value.

There is but little question that carnations this season throughout the entire east are in better condition than the average. The plants are heavy and all set for a fine winter. It is true that there is more than the average amount of stem rot but that of course is easily explained by the exceptionally wet weather. On the other hand, every grower has had enough stock, or been able to get enough stock to replace all losses.

In spite of the fact that Morning Glow has had so many friends in New England, it can easily be seen that the planting is somewhat cut down on this sort. The probabilities are that it has been overdone a little, not with the small grower who handles and sells his own stock, but by the wholesaler

MISS BOSTON AT ATLANTIC CITY

At the recent pageant on the Board Walk Miss Charlotte Trowbridge, the winner of the Boston Beauty Contest, occupied a roller chair which was entirely covered with flowers paid for by Penn, the Florist, of Boston, who gave his orders over the telephone for a lavish display.

shipping to market. When all is said and done, it is a fine, profitable variety, but it would not be safe to recommend it here, there and everywhere. It seems to be distinctly a New England sort. I have seen one grower after another who are top notch men in the profession in other sections of the country who don't seem to make Morning Glow do what it should.

The coal situation is without doubt the most serious problem facing the florist today. It seems to resolve itself, however, to the point of the large grower against the small grower.

In most instances the large commercial florists either laid in their coal or had it bought in advance at a so-called reasonable figure, at least near the bottom of the market. On the other hand some of the small growers are without their coal now, and of course a large per cent of the smaller growers burning anthracite are facing difficulties not so readily solved. I see many instances of houses being cut out after cold weather.

While the Dutch bulbs have been late in arriving, that fact is more than atoned for by their quality. I have recently had occasion to talk with representatives of all the seed stores in Boston, and the unanimous opinion is that they never saw a better lot of bulbs than those which are coming in at the present time. Hyacinths seem to be particularly good, but all kinds are in fine shape. Some difficulty has been found in getting them stored, owing to the continuous wet weather. I have never seen Peter Miller soaked to such an extent as on one of the recent wet, muggy days when I visited the Thomas J. Grey establishment. Of course, I needn't hesitate to add that it was perspiration with which he was soaked, but that was running off his face as a result of his exertions in getting bulbs under cover on a day when the rain came down in torrents every few minutes.

Apparently the high price of paper-white narcissi is being reflected in a greater demand for the so-called Chinese sacred lilies. The price of these lilies has not varied greatly, and accordingly florists are beginning to buy them in greater numbers. It was recently reported that a large shipment was started from New York to Seattle.

On a recent visit to Castle Hill Farm in Ipswich, of which Mr. Robert Cameron is superintendent, I was much interested in a lot of new hotbeds because, instead of being built of cement or planks, they were constructed of hollow tile. Mr. Cameron said that the expense was considerably less than would have been the case had either of the other materials been used. Without doubt hollow tile has special advantages for such a purpose, being slow to reflect changes in the atmosphere. It seems likely that they can be put up rapidly, and their inexpensiveness should make them worth investigating by gardeners and florists. I shouldn't be surprised to find them used quite extensively in the future wherever permanent hotbeds or coldframes are to be constructed.

Arthur Hans, the gladiolus grower of Woburn, Mass., shipped 1,500 gladioli to the Poland Spring House, Maine, to be used for decorations for a fashionable wedding. The colors were assorted white, blue and pink. Philip Flaherty, who has charge of the greenhouses at the Poland Spring establishment, came to Woburn to make the selection.

Mr. Hans has recently developed a location on Washington St., where he has twelve acres, nearly all of which is under cultivation. Formerly Mr. Hans was in Billerica, but finds better business facilities in his new location. Mr. Hans is an old timer in the bulb trade. At one time he was agent for a firm in Belgium, and it was in Holland itself that he learned how to grow bulbs to the best advantage.

## NEW ENGLAND

A. A. Bowker, the Upton, Mass., florist, was one of the judges at the recent fair of the Upton Farmers' Club at which Senator Lodge was the principal speaker.

Irving Stewart, son of George F. Stewart, the well known superintendent of the Lyman estate in Waltham, is to succeed James Methven, at Readville, Mr. Methven going to Faulkner Farm.

The robbery was recently reported of $850 from Frank Moffatt, an aged employee of Mrs. Florence Austin, the florist, Upham Road, Milford, Mass.

The Outpost Farm and Nursery Corporation, of Delaware, has bought 612 acres of land in Danbury and Ridgefield, Ct., for growing nursery stock.

## SELLING COSTS

### How They Should Be Divided—Retail Profits

At the recent Florists' Convention in Canada great interest was taken in a discussion on finding the operating costs of a retail business. This was led by Mr. McFadden. Mr. McFadden made it clear that the figures he used did not represent the figures of any special business but had been worked out on a percentage basis and in a way which it was felt would make them useful as a guide for the average florist. He explained that conditions varied in connection with every establishment and that the figures could only be taken as approximate and used as a basis for comparison. They represented the averages of a number of establishments whose figures had been examined.

"When you buy flowers," said Mr. McFadden, "you should aim to sell them at the rate of $2.00 for every $1.00 you pay. This represents an increase of 100%. In the case of made-up work they should be sold at the rate of $3.00 for every $1.00 spent for the stock. This represents an increase of 300%, making an average increase of $1.50." He claimed that florists would find that an hour a day spent in entering up their records in a cash book would prove profitable.

Under the heading of "Cost of Merchandising" he showed that the purchase price on the foregoing basis of flowers represented 50% of the sale price and of made-up work 33½%, making a total of 83½% or an average for the two grades of goods of 42%.

The overhead expense averaged about 5.3%. Under this heading he placed rent and taxes at 4.5% of the gross sales, insurance at .02% and light, heat and water at 5.3%. Under the head of "Running Expenses" he placed petty expenses such as telephone, car-fare, etc., at 3%, wrapping boxes, paper and twine at 3.5%, depreciation 1% and advertising 5%.

"Delivery Costs" were placed at 3.5%. This should cover the cost of operating the cars, depreciation, etc.

"Wages" were placed at 25%. Mr. McFadden claimed that the proprietor should allow himself a fixed salary and charge it up in the usual way. The cost of "refrigeration" was placed at .05% and "bad accounts" at .05% making a grand total of 88%. This left a profit of 12% on the gross sales. From this, however, would have to be deducted interest on the investment which would probably reduce it to about 9%. Mr. McFadden made it clear that this estimated profit was on the gross sales and not on the capital invested. He believed that retailers should aim to make at least that amount of profit on their sales.

Mr. Yavner of Toronto thought that a profit of 5% on the gross sales was about as good as any retailer could expect to make.

# GARDENERS IN BOSTON

## Twelfth Annual Convention One of the Largest and Most Successful Ever Held

### OFFICERS ELECTED

**President, John Barnet, Sewickley, Pa.**

**Vice-president, David F. Francis, Cleveland, Ohio.**

**Secretary, Martin C. Ebel, New York.**

**Treasurer, Montague Free, Brooklyn, N. Y.**

**New Trustees, Thomas W. Head, Red Bank, N. J.; D. L. Mackintosh, Alpine, N. J.; Arthur Smith, Madison, N. J.; Robert Cameron, Ipswich, Mass.; Andrew J. Dorward, Newport, R. I.**

It was a very successful convention which the National Association of Gardeners held in Horticultural Hall, Boston, September 12-15. The attendance was large, the weather was favorable and many important matters were considered.

As Mayor Curley was unable to be present, Corporation Counsel E. Mark Sullivan welcomed the visitors to the city, and a witty response was made by D. L. Mackintosh, of Alpine, N. J. Pres. A. C. Burrage, of the Massachusetts Horticultural Society, and the recent recipient of the George R. White medal for eminent service to horticulture, made a special plea for the preservation of the wild flowers. He said that not only must the wild flowers be saved from destruction, but the seeds of these flowers should be planted to increase the number.

Commissioner of Agriculture A. W. Gilbert welcomed the visitors in behalf of the State.

Miss Marian R. Case, of Weston, representing the Garden Club of America, made an address which was heard with much interest, in which she described the remarkable work which she is doing for boys on her place, giving them practical experience in gardening matters while teaching them the first principles of horticulture and encouraging them to seek for a more advanced education along such lines.

The feature of the opening session was the address of Pres. Robert Cameron, and something of a sensation was made by his attack on Quarantine 37, as in past years he had seemed to

DELEGATES TO NATIONAL GARDENERS' CONVENTION

Front (Left to Right)—Mrs. W. J. Sealey, Port Chester, N. Y.; Martin C. Ebel, Secretary, Summit, N. J.; William Thompson, Sewickley, Pa.; Mrs. William Kleinheinz, Elkins Park, Pa.; John Barnet, President-Elect, Sewickley, Pa.; Mrs. John Kuhn, Philadelphia, Pa.; Dorothy Ebel, Summit, N. J.; Helen Hambler, Freeport, L. I.; Robert Cameron, Ex-President, Ipswich, Mass.; Mrs. William Anderson, South Lancaster, Mass.

Back (Left to Right)—George Strange, Port Chester, N. Y.; William Kleinheinz, Elkins Park, Pa.; William J. Sealey, Port Chester, N. Y.; John Kuhn, Philadelphia, Pa.; Joseph Manda, West Orange, N. J.; William F. Leary, New Rochelle, N. Y.; William Anderson, South Lancaster, Mass.

favor this quarantine. He admitted that he had made a complete about face in the matter.

On Tuesday evening no business was transacted, the evening being given over to an illustrated lecture on the Arnold Arboretum, by E. I. Farrington, Editor of Horticulture.

At the morning session on Wednesday the several amendments to the by-laws which had been proposed were adopted after considerable debate. A unanimous vote was passed urging the Federal Horticultural Board to modify the present stringent regulations so that rare and interesting plants from other lands may be admitted for the use of amateurs.

Mr. W. N. Craig declared that the Federal Horticultural Board had made itself a tariff board and was keeping out plants greatly needed in America for ornamental purposes. Mr. Mackintosh, of Alpine, N. J., replied to Mr. Craig, saying that the quarantine was doing much to benefit American horticulture.

The only contest in the election of the principal officers was for Vice-president, the names of David F. Francis, of Cleveland, Ohio, and William Gray, of Newport, R. I., being proposed. Mr. Francis was elected. It was voted to hold next year's convention in Pittsburgh, and President-elect Barnet promised a warm welcome.

### The Banquet

The annual banquet was held at Hotel Brunswick, which was the official headquarters of the convention, on Wednesday evening, and was largely attended. Judge Charles W. Hoitt, of Scituate, made a delightful toastmaster, and aroused much laughter by his witty remarks.

Judge Hoitt was introduced by W. N. Craig, General Chairman of the Committee on Arrangements, and in turn presented the following speakers: Robert Cameron, retiring president; John Barnet, the new president; D. L. Mackintosh, a former president; ex-president Thomas W. Head, of Red Bank, N. J.; James Stuart of Mamaroneck, N. Y.; Secretary M. C. Ebel; William Kleinheinz, of Ogontz, Pa.; William Munroe, of Mateo, Cal; Edward I. Farrington, of Boston; J. H. Troy, of New Rochelle, N. Y.; Mrs. B. Hammond Tracy, of Wenham; Joseph McMahon, of Des Moines, Ia.; W. A. Manda, of South Orange, N. J.; Joseph Manda, of West Orange, N. J., and James Wheeler of Natick.

### Watch for Craig

One of the pleasantest features of the evening was the presentation to Mr. Craig of a beautiful gold watch and chain. A witty presentation speech was made by Mr. Mackintosh, allusion being made to Mr. Craig's retirement from the position which he has long held as superintendent of Faulkner Farm in Brookline, to enter the commercial field for himself. Mr. Mackintosh spoke of the debt which the association owed Mr. Craig for the great amount of hard work which he had devoted to its interests. Mr. Craig was much affected, but responded briefly, thanking his friends for their gift and kind thoughts.

### Two Days of Sight Seeing

Thursday and Friday were occupied with trips to the leading estates in and around Boston. Fifty machines and nearly 225 people were counted the first day, when a tour of the North Shore was made. Most of the gardens were visited for only a few minutes, but several hours were spent at the Richard T. Crane estate in Ipswich, of which Mr. Cameron is superintendent. Here an elaborate clam bake was served on the beach, and Mr. Crane himself made a short speech of welcome, being introduced by Mr. Mackintosh. During the trip refreshments were served by Mr. Burrage of Orchidvale, at the Proctor estate in Topsfield, of which James Marlborough is the efficient superintendent, and by Mr. and Mrs. B. Hammond Tracy of Wenham.

The second day's trip took in the Hunnewell estate at Wellesley, where the many rare trees and shrubs were admired, the Larz Anderson estate, Faulkner Farm, the C. S. Weld estate and Prof. Sargent's estate in Brookline, the Arnold Arboretum and Franklin Park.

## ATTACKS QUARANTINE 37

### Pres. Cameron Also Says Nursery Prices Are Too High

In his annual address Pres. Robt. Cameron said in part:

"Throughout the country during the past year business conditions have not improved greatly. Consequently our profession has suffered somewhat from that cause. One particular outstanding cause for so few new large estates being developed at this time is the outrageous prices Nurserymen are charging for plants. The injury that is being done to our profession is serious and until a law is passed to protect customers from such scandalous prices, gardening and horticulture of every description is to suffer. There is no real reason for this condition, as labor is plentiful and a good deal cheaper.

"Our aim as professional gardeners is the beautifying of the country, therefore our Association should do its utmost to get the material such as everyone who so desires can obtain to beautify their homes. Quarantine Bill No. 37 is one of the best things that has happened in a century to enable the Nurserymen to get rich quick. This has given them an excuse for the unreasonable prices with the pretext that there are not enough plants to supply the demand.

"There were quite a number of men in the early part of the year looking for employment. Owing to the economical conditions of the country there were not so many positions filled as was anticipated. The reason for so many asking for changes was brought about largely on account of many of the large estates reducing the number of men in their employment, thus making, it in many instances, almost impossible for superintendents and head gardeners to run the estates with credit to themselves. Our country at the present moment is suffering acutely from coal and railway strikes and the outlook at the present time is anything but encouraging to those having large greenhouses on their estates.

"Young assistant gardeners are no more plentiful. In previous times Great Britain, Germany, Switzerland, France and other European countries kept us well supplied, but since the World War there is a decided shortage. Young American boys have not taken kindly to gardening under the old way of training. It gives me great pleasure to announce at this time that the Massachusetts Agricultural College at Amherst, in co-operation with the National Association of Gardeners, has made arrangements whereby a special course of training for gardeners is to be established. The Massachusetts Agricultural College will conduct the theoretical instruction, while the National Association of Gardeners will take the responsibility of seeing that the training of the practical work is carried on properly. The course of training is planned with the expectation of fitting men for practical gardening, either as commercial florists, nurserymen or as gardeners on estates, foremen and superintendents in parks.

"The Massachusetts County Agricultural Schools are turning out useful boys and many of them are interested in gardening. I have had several of them and they have given good satisfaction.

"Throughout the country there is evidence that the public is being

aroused at the wanton destruction of our native flowers and plants. Clubs and societies are urging their members to do all in their power to protect the native flora. Let our Association go on record as opposed to the ruthless and thoughtless pulling and destroying of our native flowers and plants along our roadsides by automobolists and others. Let us also protest against the destruction of our beautiful laurel and other Christmas greens for decorations.

"Our Association should be given more publicity. The notices in the Gardeners' Chronicle are not sufficient. We ought to have well written up notices in other magazines. Instead of having the advertising continuously in the Gardeners' Chronicle, discontinue it in that magazine for a time and put it in some other magazine,—that is, if we can't afford to have it in more than one. I would like you to give this your consideration. This would bring our Employment Bureau into more prominence and help those who are looking for employment.

"School gardening is of immense value, not only to the children but to the parents also. What the children are taught about gardening creates a love for horticulture and in this way the beautifying of home surroundings and the improvement of villages and towns are feeling the effects of this good work. The Exhibitions of the products of children's gardens are larger and of better quality than ever before Let us help this good cause along by always giving willingly information and encouragement to those who need it.

"The time of the year when we hold our convention should be given consideration. We hold the convention too late in the season and the estates which we visit are not seen at their best. This part of the program is of great educational value to gardeners. I personally believe that about the middle of August would be nearer the right time to see gardens and estates when they would be at their best. This subject should be given our consideration.

"If there are any gardeners here who do not belong to this Association I extend to you an invitation to join the National Association of Gardeners. In unity there is strength. Don't be selfish. Don't join the Association just to see what you can get out of it. Instead of that, join the Association to see what help you can give to it. Have the right spirit, join the Association with the idea of helping every brother gardener and every lover of horticulture."

# WILSON WARMLY WELCOMED

## Given a Right Royal Greeting by the Horticultural Club of Boston

Ernest H. Wilson, assistant director of the Arnold Arboretum, who has just returned from a foreign trip which lasted over two years, and in which he covered 100,000 miles, was given a right royal welcome by the Horticulture Club of Boston at the Parker House, Wednesday evening, September 20. Mr. Wilson is president of this organization, having been kept in office during his absence, and there was a large gathering of club members and invited guests to celebrate his safe return.

Ernest H. Wilson

Vice-president F. R. Pierson, of Tarrytown, N. Y., presided. Others at the head table, besides President Wilson and Secretary Fred Wilson of Nahant, were Leonard Barron, of Garden City, N. Y., W. C. Stickel and Allan Peirce. Charles S. Strout of Biddeford, Me., Alexander Montgomery and W. O. Roy, of Montreal, Canada, were among those present.

Judge C. W. Hoitt made the address of welcome for the Club at the close of an elaborate banquet. A silent toast to the members who had died during Mr. Wilson's absence was drunk standing, after which the president was called upon to report on his wanderings. He thanked those present for the honor done him, and then gave a most interesting review of his trip.

After spending a few days in England he went to Australia, and was south of the equator most of the time while away. He said it was very difficult to get accustomed to conditions the other side of the line, as both the seasons and the vegetation were entirely different. It was hard to realize that the north, where the sun was to be seen, was not south, and that September and October were the spring months.

In Western Australia he was impressed by the absence of bright green color in the foliage. Practically all of the trees are yellowish green. The dominant tree is the Eucalyptus in many forms. The broad leaved evergreens in that section have their foliage on edge instead of with the broad side exposed to the sunlight. Some of the Eucalyptus trees are the tallest trees in the world, although not the biggest. Yet there are some kinds of Eucalyptus only two feet high. Several varieties have brilliant orange scarlet flowers eight inches across. The trunks of some of the Eucalyptus trees are as white as marble, and often there are no branches for a hundred feet or more. To walk through a forest of these trees is like passing through some gigantic cathedral with marble columns.

Grevillea robusta, grown as a greenhouse plant in New England, makes a tree in West Australia, and carries handsome flowers.

Another tree called Jarrah in West Australia is the one from which paving blocks are made, although it seems too valuable for that purpose, as it is much like mahogany. Curiously enough this tree will grow nowhere else in the world.

Another tree which interested Mr. Wilson was the raspberry jam tree which smells exactly like raspberry jam. The botanical name is Acacia acuminata. This tree is very remarkable, as it will grow to be seventy feet high in locations where there is only seven inches of rainfall. Pres. Wilson predicted that these trees were going to change the whole aspect of the arid sections of Western America, where they probably can be grown readily.

On the way to South Australia he found water being carried four hundred miles to the gold fields.

In New Zealand all the trees are evergreens, none of them being bare at any season. New Zealand he found an unusual country. Nobody there is

very rich and nobody very poor, so that the people are happy and contented, unless it is the housewife, who wants an assistant for cooking. Maids are harder to find there than they are in America.

The tree ferns are very impressive, some of them having jet black stems, and make a tremendous growth. They grow in the semi-darkness of the forest, and one must walk on the crowns to keep from sinking into the bog.

In Tasmania, where the apple industry flourishes, Mr. Wilson was interested to find that the popular varieties are the Rhode Island Greening and the McIntosh Reds. Hops, which will not grow in Australia, are a big crop there.

Returning to Australia, Mr. Wilson visited other sections and said he considered Melbourne the country's most beautiful city. He was interested to find the Hadley rose growing well there, and very popular. Near Melbourne he visited a chrysanthemum grower who is well acquainted with several American growers, including Mr. Totty.

Mr. Wilson didn't like India very well, but found some interesting things there. India is the true home of Dianthus chinensis, which in spite of its name has never been seen in China except in cultivation.

Considerable time was spent in Africa, and Mr. Wilson found much of interest from a botanical standpoint, and many very pleasant people.

South Africa pleased him very much, especially the flora. It was pleasant to find Agapanthus umbellatum growing wild in the swamps. There are five hundred species of heather in South Africa, and they make a fine showing. There are no cacti on the African continent, but Euphobias take their place. Amaryllus belladonna grows wild, and usually comes out in great abundance following a wild fire. The scarlet geranium grows wild, and is very common. Watsonias flourish, but usually mark poor soil, while Pelargoniums indicate good soil, according to the farmers.

It is impossible to give more than a very brief outline of Mr. Wilson's long talk, which was heard with the greatest interest.

As a souvenir of the occasion each guest carried away a daintily framed photograph of the distinguished traveler.

---

Jas P. Thornton, for several years located on East Broadway, So. Boston, is now on Dorchester street, having been obliged to move because of changes made in the building.

# BOSTON DAHLIA SHOW

## Record Breaking Attendance — Many New Seedlings Are Exhibited

More than 6100 people attended the Dahlia Show in Boston, September 9 and 10. This was a thousand more than last year, and many more than at any other summer show. Apparently the dahlia remains the most popular flower with the great mass of garden lovers. It was an excellent show, and all the space was filled, one room being given over largely to fruits and vegetables.

Most of the flowers were arranged in bottles in long rows, but the Quanapowitt Dahlia Gardens of Wakefield departed from this custom and presented a table on which the flowers were arranged in baskets and vases with foliage and ribbon decorations. This added much to the beauty of the show.

The largest exhibit was made by J. K. Alexander, of East Bridgewater, who had 4400 blooms, in charge of Mr. Alexander's son, Herbert. Among the novelties was President Harding, originated by Mr. Alexander and exhibited for the first time. Helvetia, a white and scarlet single dahlia from Holland, also attracted much attention. Mr. Alexander showed several dahlias which he considers of special value for florists, including Madonna, pure white; Maud Adams, white, tinted pink; F. A. Walker, pink. Latona, a peony dahlia from Holland in autumn shades, was one of the prettiest in the Alexander collection.

Mrs. Florence A. Southwick, of South Milford, won first prize for her show of the California dahlia, Mariposa. Mrs. Southwick, who is an extensive grower, had an excellent exhibit.

Thomas Leavitt, president of the New England Dahlia Society, had a very large collection, including many imported novelties. There are few growers outside the professional class who have so many rare and unusual dahlias as Mr. Leavitt, whose gardens are in Assinippi, Mass.

The only retail florist to exhibit was H. R. Comley, who showed dahlias artistically arranged in baskets.

One table, shown by W. H. Cruff of Marblehead, was devoted to seedlings of the famous peony dahlia known as Geisha, some of which were very beautiful.

Joseph Breck & Sons showed the Mrs. Calvin Coolidge, which is announced as a new variety to be put out next year. It is a large dahlia of the peony type and of a delicate orchid color. These growers had a very large and well arranged exhibit.

Sunbeam Farm of Beach Bluffs had several new varieties of special merit on exhibition. One which had been named Mrs. Lillian C. Little is a hybrid cactus, of a light orchid shade. Sorosis Souvenir is another novelty, a very large dahlia and one never shown before.

Thomas H. Hughes, one of several growers from New Bedford exhibiting at the show, had a particularly large number of dahlias in the new autumn shades, which are in great favor at the present time. His exhibit also included what was probably the largest dahlia in the show, an enormous bloom called The Bashful Giant, and a product of the Judge Marean strain.

Edgar Darling, also from New Bedford, is noted for his cactus dahlias, and his table included many remarkable varieties of this type. A. W. Hathaway, a third New Bedford exhibitor, was particularly successful with show dahlias.

George F. Fish, of Bedford, a travelling salesman who grows dahlias as a hobby, had a large number of novelties, some of huge size, which he has produced in his leisure.

Fottler, Fisk & Rawson showed a novelty in Margaret E. Willis which aroused much interest. It is a peony-flowered dahlia and lavender in color. In their exhibit was also a French dahlia called Marguerite Boucheron, of much beauty. They also showed Patrick O'Mara, very well grown.

The awards for flowers follow:

### The Awards

John Allen French Fund. **Dahlias, Show and Fancy,** 12 blooms, 1st, S. R. Loker; 2d, W. S. Symonds. **Cactus,** 12 blooms, 1st, S. R. Loker. **Decorative,** 24 blooms, 1st, Thomas Leavitt; 12 blooms, 1st, Hayden & Storey; 2d, S. R. Loker. **Peony, Flowered,** 12 blooms, 1st, Thomas Leavitt; 2d, S. R. Loker. **Pompom,** 1st, W. H. Symonds. **Collection,** 1st, E. M. Gerould; 2d, E. W. Darling. **Wild Flowers,** 1st, Mrs. F. C. Upham.

Gratuities: Joseph Breck Co. Meritorious Display, Silver Medal. Norman and Hazel Anderson, Amateur Display. George Gill, Decorative Display. D. H. Gruff, Dahlia Seedling from "Geisha." Honorable Mention. Loren D. Towle, L. C. Colemaniana. First Class Certificate. E. F. Dwyer & Son, Seedling Dahlia, Honorable Mention. Henry Comley, Basket of Dahlia Blooms. Mrs. C. D. Benedict, Decorative Display, Honorable Mention. G. L. Fish, Display of Seedling Dahlias, Honorable Mention.

## DAHLIA NOTES

Flowers are to be given special attention at the great Brockton (Mass.) Fair, October 3-7. It is expected that there will be a particularly fine display of dahlias. The exhibitors will be required to maintain fresh flowers in receptacles during the five days of the fair. Dr. S. Irving Moody, well known as a grower of dahlias and gladioli, will have charge of the flower show.

Among the seedlings which are being developed on the dahlia farm of J. K. Alexander of East Bridgewater, there is one which excites special comment. It is called Grace Kirschner, and belongs to the peony class. The colors are rose and white. Mr. Alexander has been growing several California importations, which he considers unusually satisfactory for New England. One of them is George Walters, a salmon pink hybrid cactus of large size, and a pure white hybrid cactus, Mrs. N. E. Estes, which is one of the largest dahlias he has ever grown. Mr. Alexander is also much pleased with Tom Lundy, a hybrid cactus dahlia with very large deep red flowers.

At the recent flower show of the Horticultural Society at Worcester, Mass., a leading feature was the dahlia display of J. Frank Cooper, who has been remarkably successful with these flowers.

Capt. Thomas G. Bemister, of Woodside St., Salem, Mass., has become widely known as a dahlia expert. Mr. Bemister has originated several new varieties of unusual merit.

Mr. Ernest H. Littlefield, of Brewer, Me., has come to be known as one of the most successful dahlia growers in the Pine Tree State. He has been particularly successful in producing large blooms, having some flowers of the decorative type ten inches in diameter. He recently had a display of 125 varieties at the store of the R. B. Dunning Co., in Bangor.

At the recent largely attended flower show in Lawrence, Mass., Charles Dutton had an unusually attractive display of dahlias. Mr. Dutton, who lives at 18 Greenfield St., makes a specialty of pompon and miniature dahlias.

Henry Thibault, of Marlboro, Mass., is one of the largest dahlia growers in that section, having about 2400 plants this year.

At the September meeting of the New Bedford, Mass., Horticultural Society, Thomas Hughes of Brownell St., New Bedford, who has been very successful in growing the dahlia, discussed that flower. The dahlia show was held on September 20-21.

# King GREENHOUSES

The consistent growth of the King Construction Company since its organization twenty years ago is a testimonial to the unvarying quality of King Greenhouses. Built with an eye to permanence, of the best quality of workmanship and material the reward has been the confidence of the growers who want the best in greenhouse construction and service.

The superior quality and low cost of King Greenhouses will interest you. Write for the bulletins on semi-iron, pipe iron frame and steel frame flat rafter houses. We'll send them without cost or obligation immediately upon receiving your letter.

*When you think of good greenhouses, think of KING*

# Wilson's O. K. Plant Spray

**Kills Plant Insects, Scale and Mildew**

***Used by Leading Gardeners***

**Bbls. $90 ½ Bbls. $50 10 gals. $20 5 gals. $10**

Glen Cove, L. I., October 18, 1921.

ANDREW WILSON, Inc.,
Springfield, N. J.

Gentlemen:

Having used your Plant Spray for the last four years, I have now cleaned my Box trees of Box mite after all other remedies had failed, and am now using it for greenhouse and outdoor spraying.

You can use this letter any way you think fit for the benefit of my fellow gardeners.

Very truly yours,
J. W. EVERITT.

Supt. J. T. Pratt Est.

—HORTICULTURE—
Established by William J. Stewart in 1904

VOL. XXXVI. September 25, 1922 No. 6

PUBLISHED SEMI-MONTHLY BY
HORTICULTURE PUBLISHING COMPANY
739 Boylston Street, Boston, Mass.

EDWARD I. FARRINGTON, Editor

SUBSCRIPTION RATES:
One Year, in advance, $1.00; To Foreign Countries, $2.00; To Canada, $1.50.

**Cash in Advance** Without doubt there are plenty of people in all lines of the trade who would be immensely pleased if they could establish a cash in advance plan of doing business. Unfortunately nurserymen, seedsmen and florists alike apparently find it necessary to do a great amount of credit business. Nevertheless some of the nurserymen have set on foot a project which they hope will change the situation to a large extent. The Western Association of Nurserymen is particularly active in this respect, and the work which they are doing is worth the special support of the nurserymen who sell through agents.

Mr. Paul C. Stark of Louisiana, Mo., at the recent convention of the Southern Nurserymen's Association, had something to say about the results that are being secured. He said that his own company is putting their salesmen under bond, and the salesmen are starting to collect part cash with the orders. The salesmen themselves have been brought to favor the plan because of the prestige which they acquire when they are advertised as bonded salesmen.

The "Part Cash in Advance Plan," as it is called, requires that a certain amount of the total order be paid when the order is given. The customer is protected by the credentials which the salesman carries, and which guarantee him to be the representative of a reputable house that will make good all its promises. Doubtless crooked salesmen and likewise crooked buyers will not appreciate such a plan but, as Mr. Stark points out, their objection is really the best of recommendation. He has declared that nurseries adopting this plan have fewer orders cancelled, make better collections, have less stock left on hand, and suffer fewer bad note losses.

Moreover, and this is a very important consideration in many instances, the extra capital received early in the season reduces the amount of money which must be borrowed from the bank. It is quite likely that the "Part Cash in Advance Plan" will receive wide consideration from nurserymen doing an agency business.

---

**Avoiding Gluts** Thinking over the recent convention at Kansas City, members of the S. A. F. are finding special meat in the paper of Major O'Keefe, of Boston, in which he discussed co-operation advertising and similar projects. There are plenty of markets where there have been gluts this summer, and where there are sure to be gluts the coming year. Major O'Keefe thinks that gluts in many instances are due to a failure to co-operate. Because of this fact dealers become excessively cautious. They order short and again become losers because they have not stock to meet the demand. There is a regular up and down game because the dealers have not taken measures to learn just what the entire community will consume, and have not planned their buying so that there will be no danger of overstocking on the part of any one of them.

The Major contends that there is more money in working together to build a $50,000 yearly market into a $100,000 market than there is in each one trying to grab more than he can carry. Without doubt he is right in what he says, that the lack of accurate market knowledge is a very serious factor in the business of many florists. This is particularly true because of the delicacy and short life of this stock which florists sell. In every community there is a possibility of increasing the consuming power, but this is not to be done by sporadic advertising splurges on the part of single local distributors. It must be brought about through systematic and carefully thought out effort on the part of all affected. This is the secret that underlies merchandising success in all lines. Florists will "say it with flowers" to their own advantage only as they study and develop the market along constantly widening avenues.

---

**The New Market** Florists the country over will unite in congratulating the growers of Boston in having at last settled the much mooted question of a general marketplace. The new building which has been acquired by the Flower Exchange, which now includes the members of the Co-operative Market, is an admirable one. There are still some florists who think the situation is not the best, but there is every reason to believe that their objections will soon be swept away. Not only is the Cyclorama Building, which has been acquired, a historic and interesting structure, but it is a building which can easily be remodeled so as to make it unrivaled as a market house. We believe that the new flower market in Boston will come to be one of the noteworthy objects of the city, and one which the announcers on the sight-seeing busses will not long ignore. What is more, it will do much to unify the business in Boston, and to allow for expansion which is bound to come. Likewise as an investment it is likely to pay excellent dividends to the growers who have unhesitatingly put their money into the venture.

---

**Editorial Notes** It is interesting to note that the Hon. Thomas U. Sisson was beaten for nomination to Congress from Mississippi because he saved his 1921 allotment of free seeds to use in conducting his 1922 primary fight. When his opponents learned this fact, they used it to deliver most effective body blows in the primary campaign. It is to be hoped that this whole free seed business will soon be swept by the board, and that our representatives will see to it that—to quote the Seed World—"The People do not care to exchange votes for seeds."

Carnation growers in this country will be pleased to learn that C. Englemann, of Saffron Walden, Eng., a carnation grower known the world around, is soon to pay another visit to America, sailing on the Majestic late this month. Mr. Engelmann is a fine fellow personally, as well as an exceptionally good grower, and he will again receive a warm welcome when he reaches the American shores.

Speaking of carnations, we have been reminded that Maine Sunshine was not raised by Strout of Biddeford in the first place, although it was due to his enterprise that it has been so widely disseminated. This variety was first exhibited by Cottage Gardens Co., of Queens, N. Y., although only under a number. It went to Strout an unnamed seedling, soon to receive wide publicity and popularity.

# COMMONWEALTH

Brighter and deeper pink than Premier. Almost immune to black spot and mildew. A rose you can flower for twelve months per year. **A forcing rose** of the highest quality.

We shall disseminate Commonwealth for the Montgomery Company in 1923. Only grafted plants offered.

**A. N. PIERSON, Inc., Cromwell, Connecticut**

# PUSHING NURSERY SALES

## Important Points Brought Out by V. D. Hill at the Southern Nurserymen's Convention

One of the most important addresses given at the annual convention of the Southern Nurserymen's Association in Lexington, Ky., was by Mr. V. D. Hill, of the D. Hill Nursery Co., Dundee, Illinois, and many of the points brought out by Mr. Hill will be of interest to nurserymen all over the country. Mr. Hill said in part:

"I find that I am assigned the subject of 'Growing Evergreens,' but as it is of little use to grow Evergreens or any other Nursery stock for that matter, unless it can be sold, I will take only a few minutes of your time to cover briefly some of these points as they appear to me.

"Before the war, it was, of course, customary to import many of the different varieties of Coniferous and broad-leaved evergreen trees and shrubs. It was generally understood that a great many things could not be grown here in America through lack of skill or soil or climatic conditions. It was thought that the propagation of some of the Junipers, Thuya, Taxus, Cedrus, Cupressus and Biota varieties required some secret process such as only foreigners possessed. Rhododendrons and Azaleas and Boxwood were out of the question. Magnolias, Camellias, Abelias, Ligustrums, Viburnums, etc. were a down-right impossibility for American growers to even attempt. One writer even went so far as to say that American growers didn't have the intelligence to grow certain needed articles of stock formerly imported.

"Gentlemen, I am glad to say that these myths were soon exploded. As one travels around the country there is plenty of evidence that the stocks are already here or on the way. The Central and Eastern growers are getting into their stride. All through this great beautiful South land, your leading growers, big and little, are equipping themselves to produce trees and plants formerly imported from Europe and Asia.

"The Pacific Coast with its especially favorable climatic conditions also offers wonderful opportunities for the growing of varied lines of Nursery and Florist stock, and these are being taken full advantage of by the growers there. There is in process of production a vast amount of needed stock that will help to fill the gap, and put American horticulture on the map.

"With all this intense activity in the production of Nursery stock going on all over the country, what will the outcome be? For a few years the market will undoubtedly absorb what is produced, but after that, unless something is done, there will unquestionably arise the old problem of overproduction and brush piles, useful only for bonfires, also ruinous prices, both wholesale and retail, with cut-throat competition.

"The Nursery industry is composed of about 4,000 nurserymen, with annual sales of about twenty million dollars. These figures are from the 1920 census. Leading members of the Nursery industry agree that twenty million dollars is less than one-fifth of the present potential market. One hundred million dollars in sales should be reached or substantially approached by the Nursery industry in the next ten years. This advance in sales is entirely within the range of practical accomplishment.

"The consuming public of 110,000,000 people of this nation will gladly pay an average of $1.00 each to the Nursery industry for the utility and beauty of trees and plants. We, however, as a Nursery industry must develop tree planting into a national habit. This can be done by reminding this vast audience again and again throughout the year to plant trees.

"The Nursery industry has neglected to promote the idea of a tree planting habit. The Nursery industry has been playing its tune on the piccolo, while other industries have been beating a bass drum. It is time to kindle the fire beneath the boiler, get up steam, blow the whistle and go ahead. Failure to do this means that the Nurserymen will be left waiting at the depot.

"We all know what success the Florists have had in their 'Say it with Flowers' campaign. As a result of this publicity, the live Florists are getting rich, and even the sleepy Florists make money and sell goods in spite of themselves, because of the tremendous demand created by a unified activity."

---

Efforts are being made to establish a Rose Society at Fitchburg, Mass. The matter is being agitated by City Forester Guy A. Hubbard.

J. K. Alexander, the well known dahlia grower of East Bridgewater, is now fast recovering from a long illness which has kept him in bed for many weeks the past summer.

# NEW MARKETPLACE

## Cyclorama Building on Tremont Street Selected for Boston Flower Exchange

It was good news to the members of the Boston Flower Exchange and the Co-operative Market when they were informed last week that a definite location had been decided upon for the new marketplace. Most of them, too, were well pleased at the choice of the old Cyclorama Building, on Tremont St., near Clarendon, at a cost of $170,000.

Negotiations had failed to secure the two other good sites, and there are many reasons to believe that the Cyclorama Building will in the end be far preferable. In fact, it is difficult to see how any better site for the purpose could readily be obtained. The Cyclorama Building, which was built to house the great picture of the Battle of Gettysburg many years ago, extends from Tremont St. through to Warren Ave. It will have a total ground area of 29,500 square feet.

At present there is a brick structure facing Tremont Street in front of the dome under which the Cyclorama was housed. This building probably will be left standing. The dome will be taken down and the building mentioned extended back so as to cover the area.

The entire ground floor is to be left open for market purposes, and will have almost twice the space to be found in both the present markets combined. There is a fourteen-foot basement covering almost as much space, and there will be a large number of offices available in the upper stories.

It is believed that the entire wholesale flower industry of Boston can be accommodated under one roof, and that this building will serve all the purposes of the trade for at least fifty years, allowing for whatever expansion there may be.

Apart from the conveniences offered by the building itself, the parking opportunities commend the location. On the Tremont Street side a park is formed by the junction of several streets, giving ample room for the manoeuvering of machines. There is also a large amount of room at the other end of the building.

It will not be necessary to drive through the congested part of the city to reach the market with automobiles, so that out of town florists can get in and out in much less time than at present. Florists coming to the North Station by train can take a car which passes the Cyclorama Building without change. The building can also be reached readily from the subway, and florists who come from the section west of the city will not have to enter the South Station, but can get off at Back Bay, which is only three or four minutes' walk from the new location.

Pres. William C. Stickel

A report on the decision to buy this building was made at a meeting of all the committees on Monday evening, Sept. 18. Thomas Roland, chairman of the general committee, presided at this meeting. This committee has now finished its labors and the conduct of affairs will be in the hands of the officers of the Boston Flower Exchange, W. C. Stickel, of Lexington, being president.

A building committee was announced to have charge of the immediate work of reconstruction. This committee consists of Thomas Roland, Andrew Christensen, Edward Wood, Norris F. Comley, Allan Peirce and W. C. Stickel. It was said at the meeting that architects would be asked immediately to figure on the work of drawing plans for reconstructing the building, and that without question the new marketplace would be in readiness for occupancy before the expiration of the leases on the present buildings, which comes early next year.

It is expected that about $130,000 will be necessary to make the changes required, and to put the building into first class shape for an up-to-date and completely equipped flower market. Already $150,000 has been paid in. This money was subscribed blindly, so to speak. That is, without any knowledge of where the marketplace would be located. Now that a definite decision has been made, it is expected that no difficulty whatever will be encountered in raising the rest of the sum needed.

It has been a tremendous undertaking, not only to acquire a location at a reasonable price, but also to reconcile all the different interests involved. The members of the association feel themselves greatly indebted to the committee which has worked so long and strenuously to bring this about.

### TEACHING FLOWER GROWING AT PENN. STATE COLLEGE

It is announced that eight courses in flower growing will be given at the Pennsylvania State College this year. They will include greenhouse construction, practice in soil mixing, propagation, potting, watering, production of cut flowers for the wholesale and retail trade, packing, shipping, floral arrangement and the management of retail stores. The college has greenhouses for flowers, and several outdoor gardens. One of these gardens will be sixty years old next year, having been maintained in the same form since the days of the Civil War.

### NEWS NOTES

Harry Playdon, the Andover florist, and Frank McLeod, head gardener at the E. Frank Lewis estate, were among the judges at the recent annual exhibition of the Lawrence Mass. Horticultural Society.

A new gladiolus exhibited at a recent flower show on the North Shore by Sidney Hoffman, the Boston florist, has been named Priscilla Alden Grabow. It is of Cogger origin.

## NATIONAL PUBLICITY CAMPAIGN

The work of the Campaign just now is being pushed most actively. A call has gone out for a meeting of the Publicity Committee, to be held at the Society's Administration Offices, 43 West 18th Street, New York, on Monday, October 9th. As the members of the Committee will at this time be en route to attend the annual meeting of the Florists' Telegraph Delivery Association, the date for the Committee's meeting was chosen as one necessitating very little expense.

It is planned that the morning of the day for the meeting shall be given over to a conference with representatives of local publicity bodies of different cities, and the president and secretary of the F. T. D., also the business manager of that organization's publication, the F. T. D. News, have been invited to attend. In the afternoon the Committee will go ino executive session, and at this time plans for late fall and winter advertising will be discussed, and appropriations made, so that contracts with the magazines may be made to the best advantage. A regular meeting of the New York Florists' Club occurs on the evening of October 9th, and the Club will act as hosts to the visitors.

There is still a large number of subscribers to the Campaign Fund who have not taken up their pledges, on the amounts of which the Committee, necessarily, must depend for means to prosecute the advertising campaign. The Committee very properly looks upon the collection of these amounts as materially necessary in the conduct of the Campaign, and hopes that no subscriber is wilfully negligent in making remittance. Bills to all delinquents are going out from the Secretary's office this week, and prompt responses are expected. It is not a matter of whether these tardy subscribers are good for the amount subscribed, but rather of whether they are going to make their pledges good at this time, when the Committee is in urgent need of funds to carry out the plans they are formulaing.

---

A. H. Wagland, the florist of Lawrence, had an attractive display of flowers, palms and other plants at the recent flower show in Lawrence. Mass. It was one of the best displays ever put up by a florist of that city.

## CASH AND CARRY FLOWER SHOP

A novel idea has been carried out by the Century Flower Shop in Philadelphia the past summer. This concern, like most other retailers, felt the loss of the summer trade and believed that a way could be found to stimulate the buying of garden flowers. Accordingly the experiment was tried of offering bunches of these flowers at 75 cents a bunch, with a proviso that they were to be carried away by the purchaser and not delivered. Large numbers of flowers already bunched were displayed, and a large sign put up, reading, "Cash and Carry Bunches of Flowers, 75 Cents." Many sales were made as a result of this experiment.

## BOSTON

Harry Quint, the well known florist, has had his business incorporated with a thousand shares, no par value being given. The officers are: President, Harry Quint; Treasurer, Sumner C. Sydeman, and Cecelia Quint.

Thomas N. Cook, of Watertown, Mass., widely known as a rose grower, has recently returned from a long trip to the Pacific Coast, where he met many well known rosarians. He has given the climbing white rose, Bonny Prince, to the city of Portland, Oregon, where it will be propagated by the Park Department and disseminated from that city.

# THOMMEN AND BARTSCH

## Speakers at Opening Meeting of the Boston Gardeners' and Florists' Club

There was a good attendance at Horticultural Hall, Tuesday evening, Sept. 19, when the Boston Gardeners' and Florists' Club held its first meeting of the season. The following new members were admitted:

Brenton Wildes, 107 Highland St., Milton.
Michael Larkin, 65 Fernwood Rd., Roxbury.
Stanley Cogger, Melrose.
David L. Smith, So. Natick.
Thomas Cogger, Melrose.
James H. Clayne, 159 Locust St., Winthrop.

It was announced that the next meeting will be held October 24, a week later than the usual date.

Resolutions were adopted on the death of the late Patrick Welch.

A communication was read from the Cleveland Florists' Club, asking that the local club adopt the standard for grading flowers and plants which it enclosed. On motion of Mr. Bartsch it was so voted. Mr. Bartsch said that there ought to be a grading standard, especially for roses, as when a retailer had an order for two dozen roses he usually had to buy an extra dozen in order to get enough flowers of first quality. He declared that the growers usually put in several inferior blooms. The Cleveland Club stated that they hoped to have this standard adopted in all parts of the country.

Mr. Gustav Thommen was then introduced, and gave an interesting talk on his recent trip to Florida. On the way he stopped at Charleston, S. C., and he spoke of the fine flower stores which he found there. He said that most of them were large, well equipped and very modern in their appearance. Most of the carnations which they sold had to be brought from Philadelphia or New York.

At Jacksonville and other parts of Florida, he was greatly impressed by the immense size of the Poinsettias, Oleanders, Bamboos, and similar plants. He said some of the Bamboo clumps were fifty feet high and 75 feet across. He spoke of an alligator farm which he saw where eggs were hatched in incubators, and the young alligators shipped to florist stores for

Herman H. Bartsch

exhibition purposes in different parts of the country. He also visited an ostrich and snake farm.

He described his voyage up the St. John River, which is ten miles wide in some places, and spoke of solid sheets of water hyacinths so thick that even a steamer could not plow through them. In one place hundreds of horns were seen sticking out of the water, where cattle had waded into the stream. These were beef cattle, milch cows being very scarce and milk very hard to get, even in Jacksonville.

At the head of the river he was greatly surprised to find fields of celery miles long, and other garden products grown in immense quantities. He said the market growers there expected a thousand dollars' worth of profit to an acre.

At Orlando he visited Mr. F. W. Fletcher, who formerly lived in Auburndale, Mass., and is now doing a florist business in the south. He said that Mr. Fletcher had five houses, including a new house 204x18 feet which is to be heated. The other houses are cold. Mr. Fletcher has fifteen acres of asparagus under shade, and four acres around his house covered with plants in great varieties. Some roses, too, were there, particularly Jonkeer, J. L. Mock and Radiance.

Mr. Fletcher said that very few of the growers in Florida kept their land clean, this being almost impossible owing to the tremendous rapidity with which weeds grow. He found the climate not too hot, but said the natives and especially the colored men were very deliberate in their movements. He noticed one colored laborer hoeing in a field, with a King Bird perching on the hoe handle. Whenever a worm would be turned up the bird would fly down to capture it and then fly back to its hoe handle perch.

Mr. Thommen found Lakeland to be a remarkably beautiful city. This was the home of the late Mr. Marcellus Patten, and the Patten homestead is a handsome house of cement, surrounded by fine grounds. Mr. Thommen said that the dumps in Florida were the real botanical gardens, as almost anything would grow if it were placed in the ground and these dumps were filled with every kind of vegetation.

At the close of Mr. Thommen's talk Mr. William Downs said that he lived in Florida thirty years ago, and found the climate very debilitating in the long run. He said there was no comfort in summer because of the extreme humidity and that for his part he much preferred the old Bay State as a place of residence.

Mr. Herman Bartsch was then introduced, and spoke of his trip to Montreal to attend the convention of the Canadian Florists' and Gardeners' Association. He said that the convention was carried through on a clock-like schedule, and was very successful in every way. He was greatly impressed with the manner in which the program and the visitors were handled. He brought greetings from the boys over the line.

Several exhibits were shown, including a fruiting branch of Chionanthus virginiana and an unnamed crab-apple by W. N. Craig, peaches by W. H. Golby, melons and White Plume celery by James Donald. In discussing his peaches Mr. Golby said that he found it a good plan to use basis slag as a fertilizer in the fall.

At the close of the meeting refreshments were served.

**IRIS AND PEONIES**

Having a large stock of the following Iris will quote special prices for early delivery as I wish to clear the ground: **Arnols, Brooklyn, Darius, Dr. Bernice, Exquisite, Gypsy Queen, Halfdan, Helge, Ingeborg, Jacqueminot, Liabaud, Lord Salisbury, Mme. Ask for price list and see what my customers say about the service they receive. Thank you.

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

# George Watson's Corner

"You in your small corner and me in mine."

The Michell Hoorah at Andalusia on the 14th went off in great shape. There were twenty-four car loads of people left the Broad St. station at noon, which meant a couple of thousand, and there were many more by auto and trolley from all around. The executive arrangements were excellent, liberal, and well carried out. Harry himself was there—just back from Europe—and everything went splendidly. We congratulate all concerned. Eats, drinks and smokes for everybody, and a band or two. Also some speeches. Personally I was unable to get there; but they say I made a speech just the same. Maybe it was a radio. Anyway, I will say, here and now, in cold print, nobody can say anything too good about Harry!

Dennis has found a new doctor. Has been trying out his treatment, now, some eight or ten weeks, and feels much improved. Maybe he will quote you a decent price on your next little building operation. Let us hope for the best.

The new rose, American Legion, has begun to cut some figure in the wholesale market here. It shows up well, and is a welcome addition. Of course, it will show up still better as the season advances.

The Continental Hotel closed on the 8th; the Collonade on the 6th; and the Bingham and Wilmot are already razed to the cellar. You will hardly know the old Quaker City next time you call. The old landmarks for the visitor are going fast. But Dooner's is still on deck, and a few of your old horticultural friends can be found there around feeding time.

It's not only the hotels that are changing. Even the banks are moving up town. The Corn Exchange, one of the biggest of our financial institutions, has announced a new central branch to be built at 1510-12 Chestnut st., next door to Pennock Bros., to supplement their main office at 2nd and Walnut sts.

If the wage workers want to have it all their own way, and boss things themselves, instead of having the bosses boss them, it seems to a disinterested outsider, the best thing they could do would be to emigrate to Russia where all the bosses have already been killed off. Then everybody would be happy. Of course, some one will ask, who will do the work here. The answer is: the bosses of course. Most of them were workmen before they became bosses, and only became bosses because of their superior ability. So the boss and the workman would become one, and government and production would become so superior that we would at once experience a celestial atmosphere of peace, prosperity, wealth and well being beyond the dreams of the greatest idealists since the world began.

What's that? Who said Bunk? If that argument is Bunk, what do you call the arguments one hears when he goes around to a Union Labor meeting and listens to the orators there? The gist of it all seems to be—abolish the bosses. 'Bolish the Bosses! Maybe that's where that queer word Bolshevism came from. Anyhow that's apparently what it means. Objectors may now have the floor.

We must not always judge our friends from the amount of advertising they pay us for. There's that Sandy for instance. He never paid us a cent for advertising during the eighteen years that Horticulture has been running. Yet when we said a word or two about him in "George's Corner" last issue he actually sends us a letter. Showing that he at least reads the old sheet. That's what I like. It isn't the money. Every little trinkle like that keeps the grass growing greener on good old Bill Stewart's last resting place! Moral: Send in your renewal.

John H. Dodds, superintendent of the Wanamaker estate at Jenkintown, had his two weeks' vacation this month. He took in the sea breezes at Atlantic City, and enjoyed them very much.

Miss Gaires was very indignant about that cowboy stuff, so I had to buy her a box of candy. I guess it must have been pretty nice candy, for now all the rest of the charming ladies in the office force want to have a grievance—so that a "peace offering" may follow. Well, we will try and be more careful, else we may go broke.

Among our distinguished visitors last week were Mark Palmer, W. J. Palmer & Son, Buffalo, N. Y., and Harry Sheaf of the Williams Co., Pittsburgh, Pa.

We also had a pleasant visit recently from Mr. Petersen of Cincinnati. He was accompanied by his daughter. Of course everybody knows the Be-

## GLADIOLI FOR FLORISTS

Thomas Cogger, the gladiolus grower of Melrose, Mass., has a very wide acquaintanceship throughout the trade, as he makes a point of spending a large part of every year on the road. As a result of his travels he has become well acquainted with the varieties which are most in favor among those who handle cut flowers, and is always on the lookout for new varieties which have the characteristics of a good florists' bloom. Florists, of course, like flowers which are firm so that they can be shipped well, which have a large number of blooms on each spike open at the same time, and which have good color.

Among the kinds which Mr. Cogger particularly recommends are the following: America, which everybody knows; Bernice, a light yellow with red stripes, a good bloomer which opens four or five flowers at a time; Chicago, white; Crimson Glow, which is a deep scarlet with very large flowers; C. M. Kelway, pale shell pink; Europa, probably called the best clear white gladiolus; Halley, which is cheap and very popular; Lily White, which most growers report as the first flower to open in their gardens this season; Loveliness, cream color with darker markings; Mary Fennel, a deep lavender on a tall splender spike; Mrs. Francis King, a light scarlet; Mrs. F. Pendleton, salmon pink; Prince of Wales, a delicate salmon rose, and prized for its very early blooming; Schwaben, canary yellow; Pearl, a soft pink; and Wilbrinck, flesh pink with a creamy blotch on the lower petals.

While pink and white are the favorite colors among the florists there is always some call for deep red varieties.

# Principles and Practice of Pruning

By M. G. KAINS

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The accumulation of new knowledge has become very considerable, especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book as this, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth. This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself, a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery. There are 400 pages in all.

Price $2.50

HORTICULTURE PUBLISHING CO.
739 Boylston Street Boston, Mass.

# Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, $2.25.

HORTICULTURE PUBLISHING CO.
739 Boylston Street Boston, Mass.

### NEW ENGLAND

Solomon Rosenburg, of New Bedford, has been appointed trustee in the bankruptcy proceedings against the New England Landscape and Tree Preservation Co.

Henry E. Patterson, of No. Union St., Rockland, won first prize for his exhibit of gladioli at the Bridgewater Grange Fair. Among the particularly good varieties shown were Mrs. Frank Pendleton, Kunderd's Glory, Mrs. Dr. Norton, Herada, Prince of Wales, Evelyn Kirtland and Mrs. Watts.

Saturday, Sept. 30, saw the opening of Turner Bros.' new flower shop at New London, Ct. The new store is in the Burr Building, on Montauk Ave., and is unusually handsome and well appointed.

Ervin Hayden and Ariel O. Younger, of Devereaux, near Marblehead, Mass., are growing asters on a commercial scale this year. They have raised about 19,000 plants, including a new variety originated at Manitowoc, Wis., and called Meritorious Pink.

Addison L. Bemis, of Worcester, has bought the extensive grounds around the Leicester Inn at Leicester, Mass., for nursery purposes, and will move his business there. In the future he will operate as the Leicester Nurseries.

James W. McGinnis, a veteran of the World War, has opened a flower shop on Pritchard street, Fitchburg. He was formerly with Fuller, the Florist, in Leominster, and has also worked in many other places, being well qualified both as a grower and a retailer.

## Regal Lily Bulbs

**LILIUM REGALE**
**for Fall delivery**

Large bulbs, 6-9 in., $40.00 per 100.

Large flowering bulbs, 4-6 in., $30.00 per 100.

Small flowering bulbs, 3-4 in., $20.00 per 100.

**C. P. HORSFORD**
**CHARLOTTE VERMONT**

## GREENHOUSE GRAPE VINES

8-in. pots, 2-yr. old 8-9 ft. long in excellent condition for fruiting next year.

Black Hamburgh and Muscat of Alexandria at $5.00 each.

**A. L. MILLER**
**Jamaica, N. Y.**

## "The Laws of Hybridizing"

**DISCOVERED BY RICHARD DIENER**

A discovery of tremendous importance to everyone interested in plant-breeding and plant life. Any form and size of flowers, fruits and grains can be obtained by application of these laws in the quickest possible way. They are the first workable laws ever discovered in plant and animal-breeding. Included is an explanation of What Plant Life Is; Animal Life in Relation to Plant Life; What Plant Sports Are, and other valuable information. A pamphlet of sixteen pages, elegantly printed and illustrated.

**PRICE, $5.00**

**RICHARD DIENER**
**KENTFIELD, CAL.**

Vol. XXXVI OCTOBER 10, 1922 No. 7

## THE TALK OF THE TRADE

Since printing the paragraph some weeks ago about whitewashing greenhouse glass, I have found that many different methods are being used by florists in different sections. I happened to find Frank J. Dolansky, of Lynn, the famous orchid grower, in conversation with J. T. Butterworth, of South Framingham, in the Dolansky-McDonald store in Boston. These two famous orchid growers were interested in comparing notes, and the subject of whitewashing glass was brought up.

Mr. Dolansky, who covers a great amount of glass, says that he gets best results with white lead and gasoline, and that invariably he has it applied with a brush. He said in no other way could he get it put on evenly, and that even then it required a good man to apply it so that it would not be too thick in some places.

Mr. Butterworth, on the other hand, says that while he uses the same preparation, he puts it on as a rule with a pump, but admitted that this would not be feasible unless he had a man who was an expert in this kind of work, and who could be depended upon to get an even deposit all over the glass. When asked how the mixture was taken off, both men said that the best way was to use gasoline, and that a little rubbing with a cloth wet in this material would loosen the coating so that it could be readily removed.

A little later I happened to be talking with Mr. Beasley, the noted pansy grower of Quincy, and learned that he has an entirely different method of covering the glass. He uses thin whitewash, which is put on with a spray pump, and is always applied on the inside. By using it on the under part of the glass the work can be done at any time, and done rapidly. The plan is more feasible, of course, in a pansy house than it would be in an orchid house. When the time comes to remove the covering, it is washed off readily and quickly with a hose under considerable pressure. One man can walk along the length of the house and soon have the glass entirely clean.

---

I find somewhat to my surprise that a number of florists are using common twine in making up florists' pieces. They believe that in this way they are making a saving. It seems to me, though, that this is a very poor kind of economy. It is impossible to find twine which will equal good florists' thread. To be sure, there are some kinds of florists' thread which are not much better than twine, but working with such material it is impossible to make pieces which will have the appearance and the strength of those made when good thread is used. Then, of course, it is necessary to make sure that it doesn't show in any spot. The most expert florists usually use the best thread they can get because they know that it will not stretch, that it will stay tied, that it will not run, and that quicker, better work can be done when it is used. It may be possible to get along with string, but in the long run it pays to use the best thread that can be had.

---

From all reports which come from Holland, biennials and perennials will be in short crop. In some instances there will be practically no crop at all. This applies to Myosotis, the crop of which has practically been lost. The situation in France is believed to be somewhat better, although there is a short crop throughout Europe.

---

The growing popularity of the strawflowers, especially the Helichryssums, has been mentioned. As a rule they are put up in baskets, but Henry Penn has a new plan. He is showing them in decorated Japanese boxes, with the covers turned back. In this way they make good souvenirs for visitors.

The point must be remembered that these strawflowers are not satisfactory unless picked just as they open, and before the center shows at

Antoine Wintzer Among His Pets

See page 152

all, because they gradually expand in a warm moist atmosphere and, if gathered when too nearly mature, will soon lose their beauty.

Mr. Penn is also showing some attractive Physalis or Chinese Lantern plant, the fruits of which are very ornamental. It is rather strange that they are not used to a greater extent. As far as I know Mr. Kendig, of Oswego, N. Y., is the only man who does much with these fruits, and he has learned how to show them to best advantage by wiring the stems, a point which the average florist and grower overlooks.

---

Julius Heurlin, the proprietor of the Blue Hill Nurseries at South Braintree, Mass., has been particularly active of late years in developing new varieties of phlox. Mr. Heurlin now has a remarkable collection containing several new kinds which are bound to take their place as among the best in the trade.

One of the handsomest is a tall growing salmon pink variety, having a large head, to which Mr. Heurlin has modestly given his own name. A remarkably good pure white variety has been called Mrs. Heurlin. One merit of this variety is the fact that it has a very long season.

Good red phloxes are not very numerous, and Debs, a dark crimson, originated by Mr. Heurlin, promises to outrank most of the kinds now on the market. In the opinion of all who have seen it its name is the only point that scores against it. Another white variety has been called Mrs. Craig in honor of the wife of the secretary of the Gardeners' and Florists' Club of Boston, and the former president of the National Gardeners' Association. This is a very distinct variety with red eye. It makes a strong growth and produces very large heads.

While these are among the best of Mr. Heurlin's new kinds, he has several others which are exceedingly promising. He has grown a vast number of seedlings in order to get a few kinds worth saving, but his labor has not been in vain, for other nurserymen have recognized the value of his productions and are stocking up with them.

---

The Bay State Nurseries, of North Abington, is another firm which grows phlox in a large way. Indeed, there are few concerns in the country which produce more plants. Only the best varieties are being kept, but great stocks of them are being grown, as the Wymans, father and son, evidently find that this perennial is one of their best sellers. Among the kinds which they feature are Beacon, with its small compact red flowers; Debs, which looks like Beacon but has larger blossoms; Glow, a deep pink variety; Victor Heurlin, which has immense rose pink heads with very large petals; and Egan, pink with a red eye.

Without question phlox is one of the best perennials for the average private garden. It is a flower which nurserymen can always push, and the sales of which can be increased if the explanation is made to customers that it is possible by choosing the right kinds to have an exceptionally long season.

---

I had occasion the other day to ask Henry Robinson, of Boston, who handles ferns literally by the millions, if there were any truth in the report that the New England crop had been badly damaged. Mr. Robinson said that undoubtedly the report was true, except that possibly it had been exaggerated somewhat. Even last year considerable damage had been noted, many ferns partly eaten having found their way to the packing houses, and so to the wholesale dealers. Mr. Robinson said that the insect which did the damage was a small green worm, and that while it had always existed, it had never done much harm until two years ago. Now large areas are to be found where almost all of the plants have been partly eaten, the insects feeding first at the tender tips.

Although the pest is giving considerable trouble, there are reasons to hope that it will disappear in a few years, and in any case, according to Mr. Robinson, there is no need for such a panic as some of the florists seem to be manifesting. Mr. Robinson asserts that there are plenty of ferns in uninfected districts so that there will be no lack of supply. At the same time it is quite likely that the prices will continue high. Already this season there has been an advance of two cents a bunch in the price paid to pickers.

Neary a hundred thousand dollars in wages are being distributed in four mountain towns in southern Vermont among the fern gatherers. The extent of the business is not usually realized, even in the trade, but in one year a single firm has shipped twenty-eight million ferns out of Bennington, Vt. Mr. Robinson says that he is unable to state exactly what the price outlook will be, but thinks it may be about the same as last year.

---

Albert W. Bushnell has just erected a new greenhouse at Center Brook, Ct.

## ANTOINE WINTZER HONORED

### Famous Canna Breeder Celebrates Golden Wedding

There are few men in the trade who have had a record equal to Antoine Wintzer, of West Grove, Pa. For more than fifty years he has given the best that is in him to the florist profession. It is not strange, therefore, that when Mr. Wintzer and his good wife celebrated their golden anniversary recently, the event was made one of more than passing interest. From 3 oclock in the afternoon until late in the evening friends and relatives called to offer their congratulations.

Now the name of Mr. Wintzer is associated most closely with Cannas. Indeed he has often been called the Canna wizard. It was fitting, therefore, that the visitors should find the couple seated beneath an arch of Canna blooms prepared by the employees and associates of Mr. Wintzer, in the Conard & Jones Co.

A few hundred yards away were gathered another family of Mr. Wintzer, his Canna family, which he has loved and cherished for many years. In a group of blooms humbly displayed in milk bottles were the many varieties produced by the veteran propagator, more than one new variety for each year.

Antoine Wintzer was born in Mulhaussen, Alsace, coming to this country, when a small boy, and has lived in the vicinity of West Grove for almost forty years. When the Conard & Jones Co. was incorporated in 1897 he was elected vice president, which office he still holds.

His whole life has been devoted to growing and developing ornamental flowers. Not only has he taught the Canna to grow a great burst of large blooms instead of a spike of small red flowers, but he has brought forth blooms of practically every color known in the flower kingdom.

---

## BOSTON

Hoffman, the florist, has been making many changes in his store. It has been entirely redecorated, the walls being done in a delicate gray-blue. New shelves, tables and lights have been installed in the end of the store devoted to fancy fruit. This part of Mr. Hoffman's business has been greatly developed in the past few years, and he has won no little fame for the attractive windows which he arrays. New hidden lights have been installed at the top of these windows, making the display even better than before.

## NEW ENGLAND FLORISTS' ALLIANCE

At a meeting in the New England Florists' Alliance office, 77 Summer street, Boston, Massachusetts representative florists were shown sketches and ample advertising by Major O'Keefe which met with the approval of all present.

This advertising to be carried on

Secretary George Moyse

through the Alliance. Now there are florists that don't belong to the Alliance and I can almost hear them say, when they read these ads, "FINE," that don't cost me anything and means more business for me, go to it; but to these men I want to say, Do you want to get profits from other men's work? If you do you are not like the majority of florists that I have met. I find them a pretty square lot of hard-headed business men who want to pay their own way and expect you to pay yours.

The way to sell anything saleable is to advertise it, and bring it before and to the attention of everyone.

The way to lose money in the flower business is to grow or buy flowers and trust to luck that someone might die and their relatives will go to you for flowers. Most people only think of flowers when someone dies.

Now the dead don't care a hang for flowers. You can't prove that that statement is not true, neither can you prove it if you reverse it, but think for one moment of the smile of gratitude from the sick bed at the sight of flowers. People will buy more flowers if you brought it to their attention that they should buy more flowers. Keep that before their eyes. Until then you will trust to luck. The only solution is to advertise, then some more advertising. What do you care about a man buying or selling flowers in Colorado. You buy or sell your flowers here; then you should advertise here; let the man in Colorado advertise there.

With the fall flower season coming on and bumper crops of flowers with good prices some florists say to themselves, "What care I for advertising: my business is fair and as good as the other fellow's." Then, oh then, comes a glut in the market and no sales. Oh, boy, how they do hollar, "Why don't someone do something to get rid of all these extra flowers and get better prices. Why they must be dead to let things go on as they are." Now, Mr. Average Florist, you are the dead one because you should take care of these things when business is good, not wait until things go to pieces, then cry about it.

GEORGE MOYSE.

## TO HAVE NEW QUARTERS

**Several of Boston's Wholesale Florists Plan Going to Tremont Street.**

The wholesale florists of Boston are very glad that the location of the new markethouse has been definitely decided. They are now able to make their plans and most of them expect to have quarters in the new building. Henry Robinson said that undoubtedly his concern would go along. The Boston Florist Supply & Snyder Co. will, however, remain in their present location on Otis St. for the present, as they have a lease which runs for another year. McCarthy will also stay where he is. The New England Florist Supply Co. expects to have quarters in the new marketplace, and while Welch Bros. have not announced definitely just what they will do, they think that probably they will before long, nowithstanding the fact that they have remarkably good accommodations where they are now.

## McCULLUMS SUFFER FIRE LOSS

The H. C. McCullum Co., wholesale florists of Pittsburgh, Pa., suffered a loss from fire October 1, estimated at $100,000. The fire destroyed the three-story brick building which the concern used as a warehouse, and in addition to the building an immense amount of material was destroyed. Much of this material was intended for the holiday trade and cannot readily be replaced, although the company will make every effort to keep its business going without causing inconvenience to its customers.

## GROWING SHAMROCKS FOR THE TRADE.

Please tell me when to plant Shamrock seed, and how to handle the plants in order to have them ready for the trade before St. Patrick's Day?

T. J. K.

Answered by Leonard Cousins, Jr. Concord Junction, Mass.

The seed of Shamrock can be sown from the middle of October to the first of January, the date depending upon the amount of heat available. Early planting seems to be favored. Planting is done in seed boxes, and as the seed is very fine, it is just barely covered with soil and sand. The seed boxes are kept in carnation heat. Sowing is usually done thickly, as the seed do not commonly germinate very well. When large enough to handle the plants are transferred to flats in soil having plenty of manure, and are set two inches apart. The flats are kept rather close to the glass and given plenty of sunlight. The seed usually germinates in ten days, although the time varies, and in about ten weeks are ready for the flats. Finally the plants are moved to 1½ or 2-inch pots in which they are sold. It is necessary to give an abundance of water from start to finish, the plants being kept particularly well watered when in the pots, as they then have little but water to live on.

## ABOUT SELLING BOOKS

Dear Sir:

Your recent interesting editorial about why the florist should make it his business to sell books is well taken. Of course, the florists should sell books. That's the way to educate the public. The seedsmen have been doing it for the past three centuries. They know their business, and they know the more knowledge the more demand. But the florist business is only about half a century old; so we must not expect them to have the wisdom of the seedsmen, so early in the game But they are coming along fast, and we seedsmen hail them with cheerful acclaim as brethren after the same high ideal. That ideal being: Education of the Public!

GEORGE WATSON.

Philadelphia, Pa.

William J. Garden has resigned from the Henry Penn staff to enter the employ of Arthur S. Parker, who has opened a store in Wakefield. Mr. Garden will be the manager of the store, and will reside at 17 Lafayette St., Wakefield. He has the best wishes of many friends.

# NEPHROLEPIS

We are the largest growers of Nephrolepis ferns in the country. In fact, we are headquarters for them.

## Nephrolepis Norwood

The most beautiful form of Nephrolepis to date, graceful, compact and symmetrical, a vigorous, healthy grower. All growers are invited to inspect it at our Norwood greenhouses.

STRONG PLANTS

2½-in. pots, $2.00 per doz., $12.00 per 100, $100.00 per 1000.
4-in. pots, $6.00 per doz., $45.00 per 100.
Orders filled strictly in rotation.

## Nephrolepis Verona

Makes a good plant in all sizes. Much finer frond than any crested sort outside of N. Smithii. The fronds are carried on a heavy, wiry stem. We consider it one of the best of the newer introductions.
2½-in. pots, $10.00 per 100, $90.00 per 1000.
4-in. pots, $40.00 per 100.
6-in. pots, $12.00 per doz., $90.00 per 100.

## Nephrolepis Elegantissima Compacta

A dwarf, compact form of Nephrolepis elegantissima, each plant making an ideal shape.
4-in. pots, $5.00 per doz., $35.00 per 100.
6-in. pots, $12.00 per doz., $90.00 per 100.

## CYCLAMEN

SEPTEMBER AND LATER DELIVERY

This has been one of our specialties for over 20 years. In all of our experience we have never seen a finer lot of plants. We are growing our stock in new houses. They are absolutely clean and perfect in every way and not to be compared with weakly-drawn plants offered at less money.
4-in. pots, $50.00 per 100.
4-in. pots, extra heavy, $60.00 per 100.
5-in. pots, $15.00 per doz.
5½-in. pots, $18.00 per doz.
6-in. pots, $24.00 and $30.00 per doz.
7- and 8-in. pots, $36.00, $48.00 and $60.00 per doz.
This stock will be profitable to any one buying now.

## Nephrolepis Teddy Junior

Fine young plants from 2½-in. pots, $10.00 per 100, $90.00 per 1000.
6-in. pots, heavy, $12.00 and $15.00 per doz.
8-in. pots, $24.00 per doz.
11-in. tubs, $4.00, $5.00 and $6.00 each.

## Nephrolepis Harrisii or Roosevelt

6-in. pots, $12.00 per doz
8-in. pots, $2.00 and $2.50 each.
11-in. tubs, $5.00 and $6.00 each.

## Nephrolepis Scottii

2½-in. pots, $10.00 per 100, $90.00 per 1000.
4-in. pots, $35.00 per 100.
6-in. pots, $12.00 per doz., $90.00 per 100.
8-in. pots, $24.00 and $30.00 per doz.

## Adiantum Lemkesii

IMPROVED GLORIOSA

4-in. pots, $10.00 per doz., $75.00 per 100.

## PALMS

ARECA LUTESCENS

Perfect plants with rich, dark green foliage. Our stock is grown cool and hard. It is in splendid condition and will surely give satisfaction. Large sizes are very scarce this year. We have the largest stock in all sizes in the country.
6-in. pots, made up, $30.00 per doz.
8-in. pots, made up, $7.50 and $10.00 each.
10-in. tubs, made up, $12.50 each, 5½ to 6 ft. tall.
11-in. tubs, made up, $15.00 each.
13-in. tubs, $25.00 each.

**ROBERT CRAIG CO., Norwood Station, Delaware Co., Pa.**

## BUTTONHOLE BOUQUETS

### Should Florists Wear Them or Should They Not?

Some of the trade in England have been disputing the question, "Should florists wear buttonhole bouquets?" "Onlooker," writing in the Horticultural Trade Journal, has the following to say about the matter:

"A nurseryman's son argues with me that a nurseryman or a florist should not wear buttonholes. I protest that such a statement is absurd, and he immediately asks how often I meet a man in the trade with a flower in his coat. I am bound to admit it is but seldom, and of course my young friend says, 'There you are then; is that not evidence that my contention is correct?' I wonder where such an idea could arise from. I wonder why it is I am obliged to admit that although I get about a great deal among the trade it is seldom I see a flower in a nurseryman's coat?

"I suppose everyone who cuts flowers for sale will admit that it would be a grand thing for the trade if all classes of men considered a coat flower a necessary item of dress. Wouldn't it help to spread such an idea if every nurseryman, seedsman and florist made a regular practice of wearing a flower? I used, when I was a wee lad, to know a keen old florist who would never leave his home without some sort of buttonhole, and I have seen him, on occasions when flowers were very scarce, pin a leaf of a tricolor Geranium in the broad lapel of his old-fashioned black superfine cloth coat. Think what it would mean if everyone engaged in the trade made this practice a fixed habit. It simply couldn't help inducing quite a host of other men to adopt the same idea, and if there were a large proportion of men who always wore buttonholes we should very soon find a great revival of the spray vogue among the ladies."

## COMMERCIAL PEONIES

### Mr. B. C. Auten Gives a List of Standard Sorts And Discusses Blooms For Cutting

Benjamin C. Auten, of Cartersville, Mo., has an interesting way of giving valuable hints and suggestions in the plant lists which he sends out. In one of these lists, which has just come to the writer's desk and which is given over to peonies, Mr. Auten says:

"To serve as a commercial variety a peony must have good color, a fairly good stem, must open easily, must stand as a cut flower without wilting, must last several days after cutting, and must come out of cold storage without falling to pieces. A variety deficient in some of these points may still be admirable for the home market, for home use, or for garden or landscape effect. Those in this list recognized as standard commercial varieties are Festiva Maxima, Modele de Perfection, Duchesse de Nemours, Mme. de Verneville, Mme. Crousse, Duke of Wellington, Edulis Superba, Queen Victoria, Mme. Calot, Lady Leonora Bramwell, Couronne d'Or, La Tulipe, Rubra Superba.

"For cut flowers it is desirable to have a succession, the first flowers of the season bringing a little extra demand. The heaviest sales, however, are for Decoration Day, and a large share of the planting should be selected to give blooms for that occasion. As the seasons vary, it is necessary to have also varieties that come earlier, but any good commercial bloom can be held a week or ten days in a good ice-box. Here, in southwestern Missouri, all but the very latest varieties are too early, and require storage to have them for Decoration Day. At Peoria, Illinois, this year all but the late varieties were in bloom but some years only the early varieties are in time. Here the length of time between the early and the late varieties is only about twelve days, sometimes less, sometimes perhaps two weeks.

"When the blooms are wanted for cut flowers, all side-buds should be pinched out when small, and all blooms should be cut before fully open. When the blooms are to be shipped or stored, the buds should be only well started to open.

"Peonies should be kept well cultivated, and free of grass and weeds. Outside of that they require but little care or attention, a clump costing about as much per year to grow as a hill of potatoes; and a very large value, both of investment and of income, can be planted and managed in a comparatively small space. Unless the

yards of your town are already well supplied with peonies, a planting of good varieties is sure to create an energetic demand both for cut flowers and for plants."

### ABOUT CENTAUREAS

Gentlemen:

Referring to the article about Centaureas in George Watson's column, I would say that Centaurea moschata and moschata alba are both fine for growing cool as cut flowers. They do not like wet feet. Ridge planting is preferable. All this also applies to the yellow variety (Suavcoleus). All are sweet scented.

The thistle like variety is the beautiful Centaurea americana, one of the best cut flowers for outdoors. They produce large flowers, four inches across, lilac colored.

ALB. MILLARD,

### GLADIOLI AT HILLCREST GARDENS.

A riot of color was in the gladiolus bed at Hillcrest Gardens this season. Among the lovely soft pastel shades of the new primulinus varieties were the deep rich reds and scarlets and the violets of Baron Hulot and Blue Jay. A jumble of wonderful colors, all made possible by the green lawn in which the bed is set, and the darker green background of the forest.

It was once said that God painted the world green, and if we keep plenty of green in our gardens we will have few discords of color. At Hillcrest Gardens our floral shows are kept distinct from one another. First on the wood road are the hepaticas like dainty little messengers of all the floral beauty to come. Last autumn we asked our friends to enjoy the hepaticas with us on the nineteenth of April. The flowers did not fail us, but it was a dull day, there was no sun to bid them blow their flowers open, or were they partly closed in pensive thought of the last rites that were said that day for one who had so loved the flowers that he would have all the world enjoy them with him?

After the early spring flowers came the Japanese primroses in gay whirls of color with the soft sulphur yellow of the English primrose, loved by the children, carpeting the earth beneath them.

Later came the briar roses in their arches of bloom, the sweet varieties of Lord Penzance who gave them in their names the romance of Sir Walter Scott. After them the tall blue larkspur bringing heaven down to earth, or lifting earth up to heaven for they made a blue sky above the heads of the children.

Early in June the pink and white pyrethrum set their show with the lupine. They were in blossom together a year ago on the eighth of June to welcome our friends of the New England Branch of the Woman's National Farm and Garden Association when they kept festival with us.

When the hepaticas were in bloom we planted our gladiolus bulbs eight inches deep down into the earth for the large bulbs of the older varieties, and quite six inches deep for the smaller bulbs of primulinus. Here through this wet summer the bulbs grew very strong and came up with several spikes of blossoms. One stem came up above the leaves, then divided into two or three spikes of blossoming flowers. The earth in our bed is loose and properly enriched, and though the gladioli blossom each year in the same bed against the background of the forest, they yet have new soil in which to grow, for after digging up our bulbs we use the soil from this bed for the winter covering of our roses, and give the gladiolus new, fresh soil each spring. Our bed is twenty feet long and four feet long, with three long lines of blossoms. We planted them the middle of April, they were in blossom the twentieth of July, and in the middle of August they were at their height of bloom, yet there were many green buds among them with promise of more beauty to come. Planted eight inches deep the bulbs would probably not be frozen but they need digging that the old disintegrated bulbs may be removed. Then we want the bulbs which have formed around them to brighten the gardens of our friends.

M. R. CASE.

Hillcrest Gardens, Weston, Mass.

### PROF. JACK BACK

Prof. J. G. Jack, of the Arnold Arboretum, who has been on a long trip to Alberta and British Columbia in search of new material for the institution with which he is connected, recently returned and reports a very successful trip. In the course of his wanderings he visited Jasper National Park, where he obtained more than a thousand specimens of different kinds.

**QUEEN MARY CORSAGE SHIELDS**

Light, graceful, inexpensive. Appeals to every lady of refined taste.

Every live florist should have a good supply of this wonderful costume protector.

Waterproof.

Colors: violet, white, pink, orchid, blue, nile and foliage green.

**Per dozen, $3.00; per gross $30.00.**

**BRIDAL BOUQUET HOLDERS (Fancy Lace)**

These are trimmed with dainty filmy white lace, backed with chiffon and narrow silk ribbons, giving a very elegant finish to the finest bouquets.

No. 1, $1.25 each
No. 2, 1.75 each
No. 3, $2.25 each
No. 4, 3.00 each

**OLD FASHIONED BOUQUET PAPERS**

The old fashioned bouquet of formal make so popular in grandmother's time has had a revival, and the paper holder for same is again in demand.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

It is very evident that constantly increasing attention is being paid to hardy perennials by nurserymen and gardeners. New varieties are arousing more interest than ever before, which will prove a good thing for the trade. Some handsome new Hollyhocks were recently noted on the establishment of F. H. Horsford, at Charlotte, Vt. They are known as Exquisite, and came originally from Watkins & Simpson in England. They are certain to please people who like flowers in other than self colors.

Mr. Horsford is also growing a new double Gypsophila from the same firm. It is called Snow White. As a matter of fact, little can be told from this year's blooms, but it seems to promise well. If I am not mistaken Mr. Horsford's firm is the only one in the country that can truthfully claim to be propagating double Gypsophila. Their plants are not seedlings, but are grown from stock received from Holland. I was interested to find that the firm has a large supply of one year roots which will be offered to the trade in quantities before long.

Regal Delphiniums are being featured and certainly make a fine show. They came originally from Harkness, and seem to be far ahead of the Gold Medal strain of Kelways. If I am not mistaken Mr. Charles Totty's Delphiniums of this type are from the same strain. There are some of the new Lupins on the Horsford place, also from the Harkness establishment. Those in the hybrid forms have been very satisfactory, I think, but the named sorts seem to have been a little disappointing because of the fact that only a small percentage come true to name.

Perennials at the Horsford place have been looked after very efficiently by Fred M. Abbey, who has had long training in this line, and is particularly well acquainted with the newer and better varieties.

---

After another season with the raspberries which formerly went under the name of the Minnesota No. 4, but have been rechristened Latham, I am more pleased with them than ever. It seems to me that this is going to prove the ideal raspberry for New England, at least for home use. I am not sure that it is going to be quite so profitable as a commercial berry, because it ripens over a long season rather than making a single flash. The berries, however, are unusually firm, with almost no tendency to drop. This proved the case even during a lot of wet weather. During a test of several years I have seldom had a plant winter kill, and the new growth is strong and vigorous. So far I have not found it necessary to support the plants in any way.

The variety known as Ontario which came from New York State has also proved very satisfactory. La France, introduced by John Scheepers, has had a good fall crop. I have had a full season of berries from a small garden. St. Regis came very early. This is not a very heavy bearing raspberry, but its earliness and the fact that it gives another good crop in the fall make it worth while. The fruit seems small compared with that of Latham or La France, and probably the variety will be retired after a while.

No sooner had Latham ceased bearing than the ever bearing strawberries in the garden were producing well, and before long La France started in. This berry has a flavor entirely different from other kinds, and one which makes a strong appeal to all who eat it. I see no reason why it shouldn't be widely planted, although perhaps it would be well to experiment a little in very cold sections before going into it heavily.

---

At the gardeners' convention in Boston Mr. Mackintosh, of New Jersey, remarked in the course of a witty speech that the Federal Horticultural Board needn't bother itself very much about insect pests, as they will be taken care of by Friend Andrew Wilson. The reference was of course to the Springfield, N. J., man who has become well known as a manufacturer of insecticides and fungicides as well as fertilizers.

Mr. Wilson was present during the convention, and added to his already long list of friends among the gardeners and florists. In his O. K. Plant Spray he has given the gardening profession an article which is highly appreciated because effective and easily used. A spray which will rid evergreens of red spider and protect palms, orchids and similar decorative plants is something to be prized, especially when it is absolutely harmless and has the merit of drying immediately after it has been applied.

Another point about this remedy which the gardeners like is the fact that it is a great help in dealing with scale. Lager & Hurrell, the orchid growers of Summit, N. J., have been using it on their Cattleyas and Cypripediums, and the superintendents of many private estates swear by it.

Mr. Wilson has a ready wit, and while he says that his plant spray is effective in dealing with rose bugs, he also remarks that it is best to get rid of them before they get too well acquainted with you. If you can't hit them with the plant spray, you may have to use a hammer or a brick.

---

Gardeners will be interested to watch out for the new photoplay "Gimme" whenever it arrives at their town. This picture was filmed on the estate in California of which Mr. Munroe is superintendent. Mr. Munroe told his friends at the convention about some of the experiences that were gone through with while the picture was being made.

---

Burglars recently broke into the store of the Joseph Breck & Sons Corp., in Boston, and tried to open the office safe, but failed. All they got away with was 100 cigars.

The La France Raspberry

# The Dahlia

Thomas Murphy, of Peabody, Mass., long known as a dahlia specialist of unusual skill, has added to his laurels by displays made at the various shows the past season. Mr. Murphy was kind enough to put up an unusually attractive exhibit for the benefit of the National Gardeners' Association, at its recent convention in Boston.

One dahlia in the lot which attracted special attention was World's Best White, which seems to have been well named, for it is difficult to think of any other white dahlia which is its equal. It is a decorative dahlia, and grows eight inches in diameter. At the same time it has a good stiff stem, and keeps a long while when cut. Although expensive as yet, it seems probable that this will prove to be one of the best dahlias for florists, a it lends itself particularly well for the making up of florist pieces.

Mr. Murphy, who has been at the dahlia game for twenty years, has grown many hundreds of seedlings, in which he has produced a number of very excellent varieties. One of these new dahlias, Baba Bott, is particularly interesting. It is shell pink in color, with a white center, decorative in form, and stoutly stemmed. It has a very curious habit, however, of coming out white, taking on its pink tint as it develops.

One of the good dahlia growers in Connecticut is Mrs. Thomas Stack, of Still River, near New Milford. It is a feature of what has come to be one of the prettiest gardens in that section of the state.

Thomas Leavitt, president of the New England Dahlia Society, recently lectured before the Beverly (Mass.) Rotary Club, with dahlias as his subject. In connection with his talk he exhibited about two hundred specimens, and explained the characteristics of the various classes. During the evening he allowed one of his seedlings to be named by those present in honor of some lady at the gathering. Mrs. Grace E. Hill, of Salem, wife of Judge Robert Hill, was selected.

Richard Vincent, Jr., of Whitemarsh, Md., president of the American Dahlia Society, was present at the recent show at the New Haven (Conn.) Horticultural Society, which was very sucessful.

Fred D. Butler, of Springfield, has come to be one of the leading dahlia growers so far as new and rare varieties are concerned. He now has an unusually valuable collection, including a number of California varieties.

Washington, D. C., florists have been co-operating in encouraging a better knowledge of the dahlia, and recently held a show for that purpose. Z. D. Blackistone was chairman of the executive committee in charge of the show. M. D. Rice, of 1206 H. St., N. W., received the entries. It was announced that the judges would be Robert L. Graham, the florist, of Baltimore, John M. Root, a dahlia fancier of Collingswood, N. J., and Mr. Zhilow, Henry A. Dreer's dahlia expert.

The recent show of the Lansdowne (Pa.) Association was a great success. Dahlias predominated, and David R. Ritchie, of Lansdowne, was awarded first prize for having the finest dahlia. He also caried off many of the other prizes. The judges included several men well known in the trade.

S. C. Sweeney, of Pembroke, Mass., has come into the limelight as a dahlia grower. He has produced a great number of blooms this year, and intends to greatly increase his plant next season.

# King GREENHOUSES

The consistent growth of the King Construction Company since its organization twenty years ago is a testimonial to the unvarying quality of King Greenhouses. Built with an eye to permanence, of the best quality of workmanship and material the reward has been the confidence of the growers who want the best in greenhouse construction and service.

The superior quality and low cost of King Greenhouses will interest you. Write for the bulletins on semi-iron, pipe iron frame and steel frame flat rafter houses. We'll send them without cost or obligation immediately upon receiving your letter.

*When you think of good greenhouses, think of KING*

## A HYBRID LOBELIA

Some of the gardeners who attended the National Convention in Boston recently were interested when they visited the estate of Judge W. H. Moore, at Prides Crossing, in a hybrid lobelia, produced by the superintendent, A. E. T. Rogers. The plant was seen growing by the water side in the rockery, where it seemed to be very much at home. It was made by crossing Lobelia syphilitica and Lobelia cardinalis. So far as I know no cross of this kind has been effected before. Mr. Rogers has plants crossed as above and vice versa. The flowers are intermediate in size, having wider petals than cardinalis and much larger flowers than syphilitica. The color is a rose magenta. The remainder of the plants will not flower until next year, but Mr. Rogers hopes that then some other shades will appear. It seems to me that this hybrid will be a valuable addition to our hardy plants, especially if other good shades are produced. Certainly Mr. Rogers' efforts along this line will be watched with interest next season.

**The F. T. D. Convention** We believe that the members of the Florists' Telegraph Delivery Association prefer to have their annual gathering known as a business meeting, but to most people in the trade it means a convention. In any event these gatherings have come to mean much to the florist trade.

Without question the meeting now in session at Baltimore will be productive of much benefit to the members of the association, and for that matter to the trade at large, because the F. T. D. has assumed such extensive proportions that whatever it undertakes is reflected in all branches of the florist business. It is characteristic of the organization that it is seeking and hopes to develop at Baltimore a plan by which its work may be carried along in ways that are even more businesslike than in the past.

The question of a clearing house plan of handling collections is a matter to be given careful consideration. There is much to be done in this direction. The situation is not as bad as in former days, but even now complaints are constantly being made by florists that they have difficulty in collecting from other florists, especially in distant locations. In some of the smaller towns, particularly, florists have become more or less discouraged with the telegraph business, just because they have had so much trouble in making collections.

The program for the meeting is full of meat, and is strictly business throughout, although without doubt the delegates will find much opportunity for social enjoyment in the southern city, which is noted for its hospitality and good cheer.

**Florists and Shows** It is a matter for congratulation that the florists in several cities are beginning to realize the importance of public flower shows in fostering an appreciation of flowers in general, and thus aiding in the advancement of their own interests. Florists have acted as judges and committee members for many shows the past season. This seems to have been particularly true as regards dahlia shows. In Washington, the florists have gone so far as to aid in promoting exhibitions of this kind. In Boston there seems to be an unfortunate lack of affiliation between the florists as a body and the officials of the different shows. No doubt in time the situation will be changed, and the florists will take the part which they ought to take in making the shows a distinct success.

Florists have a particularly good opportunity in the shows to teach the public how to use cut flowers in a decorative way. This opportunity is certain to be seized upon eventually, as the fact is realized that in this way much can be done to enhance the public's appreciation of what are known especially as florist flowers. Many of the shows as now conducted make their appeal mostly to men and women who have gardens of their own, and who are seeking for help in making these gardens more attractive.

If the decorative side of the subject were given greater attention this appeal would be extended to those people who unfortunately are obliged to live in city apartments, but who have a fondness for the beauties of nature and would purchase flowers much more freely if they were to be shown how they could be used in different ways to give new and striking effects, yet without extravagance. Incidentally there is an opportunity in this manner to increase the demand for novelties in vases and flower holders of different kinds as well as arousing interest in other accessories.

**Editorial Notes** The American Dahlia Society honored itself at its recent meeting in New York City when it re-elected Richard Vincent, Jr., of Whitemarsh, Maryland, as president. Few men in the country have done as much as Mr. Vincent to arouse interest in the dahlia and promote its general cultivation. His own enthusiasm for the flower is so obviously genuine and whole hearted that it inspires a similar enthusiasm in other people. Under his direction the American Dahlia Society has come to be an organization of importance and influence, both of which will be increased as the years go by. The dahlia is fast coming to head the list of popular flowers, and there is much to be done in guiding the taste and method of the growers. William J. Rathgeber, of New Haven, (it may be well to give his full address, 198 Norton St., as he is the man to whom correspondence about the Dahlia Society should be addressed) was naturally re-elected as secretary, and it simplifies matters much to have Mrs. M. Rathgeber for treasurer.

While there has been considerable delay in receiving Dutch bulbs in some of the eastern cities, they seem to have reached the Pacific coast earlier than usual. It had been hoped there, as in eastern cities, that prices would be a little lower than last year. As a matter of fact, ocean rates were cut somewhat, but the railroad transportation robbed the importers of any benefit from this fact. What with the added duty from now on, bulbs seem likely to cost much more than we could wish.

It is with great regret that the trade has learned of the death of John T. Lovett, of Little Silver, N. J. Mr. Lovett had reached the age of 70 years, but felt that there was yet much for him to do. Certainly his advice and influence will be missed. Mr. Lovett had a very interesting as well as successful career, having had a prominent part in the development of the nursery industry in America for nearly half a century. His own business grew with great rapidity and the Lovett plant now covers 250 acres of land. Because of his appreciation of the work done by the different horticultural societies and the fact that he helped organize many of them, he had a very wide acquaintanceship. His passing will leave a distinct void.

# GRAFTED ROSES

It may seem early to talk roses for next spring, but we have been booking a lot of spring orders and you, who may be wanting a big lot early, may feel disappointed if we are not able to give you what you want when you want it.

Take up the question of spring requirements early!

**A. N. PIERSON, Inc., Cromwell, Connecticut**

# CEDAR FOR FLORISTS

## S. A. Frost of Toronto Explains How It Can Be Used For Making Floral Designs

One of the most interesting features of the recent convention of the Canadian florists was the series of practical demonstrations in the use of cedar and similar materials.

The opening demonstration was provided by S. A. Frost, of Toronto. Large quantities of cedar were on hand, and from it Mr. Frost demonstrated numerous ways in which it could be used with benefit by all retailers. Mr. Frost advised the use of cedar because it can be used in small pieces of design work, and large fronds for backing up sprays, or as small trees for decorations. Placed in water, it takes the place of stock in the store in summer time and not only makes the place look full, but improves the appearance of the decorative features of the store, and is always ready for use any time it is required. It helps as well to make the store look cool. In winter it has a refreshing appearance, and if cut then and kept in water it will remain green and fresh looking for months.

Mr. Frost then gave a most interesting demonstration of the many ways in which cedar could be used. Barrel hoops were used as a frame work for cedar balls to be strung up for decorative purposes. In the use of ropes of cedar he advised utilizing strong thread for binding purposes. With cedar as a foundation, Prince of Wales gladioli were inserted in a basket design which was most effective. He advised the use of cedar to place around tubs containing palms as a cover.

Other impressive demonstrations were given by W. C. Hall, and Frank McKenna of Montreal, and S. A. McFadden of Toronto. Mr. Hall made up a $10.00 wedding shower bouquet, using Ophelia roses and ferns, with ribbon to bind the stems for a handle. He advised those present to be more careful about making a bouquet for a widow than for a bride, on the ground that she will be less excited and more critical. He said he liked to see the brides beforehand, in order that he could make a bouquet to suit.

One point that was brought out strongly by Mr. McKenna was that retailers should be careful not to try and make too large a profit on their made-up work. He told of having heard a retailer boast of the profits he had made on a certain design. The result was that, while Mr. McKenna did not say anything to him, he did not send that florist any further orders for retail work, because he felt he could not be depended upon to give value for the money.

Mr. McFadden stated that they still used tin foil on their wreaths as it helps to retain the moisture better. Colors of tin foil were used that would harmonize with the designs. While making up a spray he showed how garden flowers, which are plentiful and cheap at this time of year, could be used to advantage. Some cedar was used for backing. The color effects were most effective. A corsage of Pilgrim roses was made up. He advocated the use of ribbon to match the flowers and said that they frequently select flowers that will blend with the lady's dress. If the color of the ribbon is vivid it may not fit in to the general effect. Care should be taken to guard against any possibility of moisture from the corsage staining the dress. Avoid the use of too much wire. All the demonstrators were heartily applauded a sthey completed their different designs.

### GORNEY CHAIRMAN

#### Special Florists Group to Aid the Salvation Army

The florists of Boston are co-operating generously with the Salvation Army in the home-service appeal which it will make October 20 to 30 for $200,000 to be raised in the city to finance the Army's manifold local welfare and relief activities during the coming year. E. S. Gorney, of the Houghton-Gorney Flower Shop, has accepted the chairmanship of a special florists group, formed in accordance with the campaign plans for the industrial organization of Boston according to its various lines of activity. Mr. Gorney is organizing a committee to assist him in the work, and plans are already underway to reach every person in the trade in Boston directly with the appeal of the Army.

### BOSTONIANS IN BALTIMORE

The delegation of the Boston members of the F. T. D. who have left to attend the convention at Baltimore include J. J. O'Brien, Charles Boyle, Sidney Hoffman, Elijah Gorney, Henry Penn and Fred C. Becker of Cambridge.

The greenhouses of Charles Allen, of Florida St., Fall River, were burned recently, entailing a loss of $5,000

# WILSON'S

# O. K. Plant Spray

## Kills Plant Insects, Scale and Mildew

*Used by Leading Gardeners*

**Bbls. $90; ½ bbls. $50; 10 Gals. $20; 5 Gals. $10**

Brooklake Park,
Madison, N. J.,
July 14, 1922.

Andrew Wilson, Inc.,
Springfield, N. J.
Gentlemen:

Your O. K. Plant Spray as its name implies is super-excellent. It is more than you claim for it. Outdoors we have cleaned our conifers of red spider. Rose garden is free and no dreaded rose beetle to dismay our efforts. Indoors I was at first skeptical with its application upon orchids. Previously I never sprayed them without loss of fleshy roots, no matter how light the application, but your spray has cleared all doubt as to its safety on rare orchids.

Carnations and Mums are kept free of pests and fungus disease. Its two-fold use is wonderful. Roses, our situation favors black spot, and every fungus disease a rose is heir to, but we spray the soil of the benches every week with 25% solution and are free.

It is in short an allied army of protection and care of all plants in horticulture's realm. I heartily recommend it.

Yours very truly,
W. R. FOWKES,
Supt. of Howard Cole Estate.

## F. T. D. MEETING

### An Unusually Interesting Program for Baltimore Gathering

Florists from all over the country are headed for Baltimore, Md., as we go to press, to attend the annual meeting of the Florists' Telegraph Delivery Association, Oct. 10-12. An elaborate and unusually interesting program has been prepared. It included:

Welcome Address by "Dad" Graham.

Response by W. W. Gammage, F. T. D. Director of the Dominion of Canada.

Greetings from European Florists, by C. Engelmann, Saffron Walden, Eng.

District Units Plan, by J. Fred Ammann, F. T. D. Field Manager.

F. T. D. Clearing House Plan, by Wm. L. Rock, A. F. Borden and Herman P. Knoble.

Final Results of Canadian Exchange, by W. W. Gammage.

Steamer Service East, by Harold C. Perry, of Dards, New York.

Steamer Service West, by F. C. Jaeger, Jr., San Francisco, Cal.

Advertising F. T. D. Service to the Public,—In Large Cities, Herman D. Schiller, Chicago, In Medium Sized Cities, Frank Schramm, Toledo, Ohio, In Smaller Cities, George A. Washburn, Bloomington, Ill.

Co-operation with the Wholesaler, W. A. Hansen, Chicago.

Holiday Business, by Harry Crouch, Seattle, Wash.

How to Make a Dollar in the Flower Business, by Herman P. Knoble.

Future of an F. T. D. Temple or Permanent Institution to House all F. T. D. Departments, by former President Irwin Berterman.

Demonstration of a New Idea, by Charles Henry Fox, Philadelphia.

Store Management, by Henry Penn, Boston.

## SOUTHERN NURSERYMEN

### New Method of Summer Planting a Feature

John C. Chase, of Derry, N. H., brings home a very interesting report of the Southern Nurserymen's Convention at Louisville, Ky. Mr. Chase attends conventions of this kind all over the country, and probably no man in America has a wider acquaintanceship among nurserymen in general. According to Mr. Chase, one feature which attracted special interest was Walter Hillenmeyer's new methods of summer planting. The Hillenmeyers operate a nursery at Lexington, and plant their seeds in baskets with an inch mesh. The following summer the plants can be taken direct from the baskets and planted anywhere desired. Considerable discussion was given to the ethics of the nursery business, and a vigilance committee of retail nurserymen was advocated. A committee to consider the matter was appointed.

James Young, of Aurora, Ill., spoke of the new national slogan of the nursery industry, "Plan to Plant Another Tree." He said that a movement started less than a year ago has become widespread, and that a broad campaign is being instituted to acquaint the public with the object of the tree planting propaganda.

It was voted to affiliate with the American Association of Nurserymen.

O. Joe Howard, of Hickory, N. C., was elected president, Walter Hillenmeyer, of Lexington, Ky., vice-president, and O. W. Fraser of Birmingham, Ala. secretary-treasurer. It was voted to hold the next convention at Atlanta, Ga.

Many of the delegates remained for the races, which came immediately after the convention, Kentucky horse racing being a great attraction. As a result some of the delegates came away somewhat poorer than when they reached Lexington, although a few are said to have had pretty good luck.

# HOW TO GROW CYCLAMEN

Herman Bartsch of Waverley, Mass., read a paper on Growing Cyclamen, at the recent Canadian Florists' Convention that aroused much interest. It was as follows:

There is more interest today in the Cyclamen plant than in any other flowering plant from the commercial point of view. Why? Because the public likes it. A well grown plant with good foliage and six to twenty-five flowers and plenty of buds gives pleasure and satisfaction to the buyer. It is also liked by the retailer because it is easy to handle.

How to produce such plants is the question and problem with the grower. There are many and different methods used by different men. Soil and condition of localities vary and each grower has to solve his own problem. I shall confine myself to my own method and observation, having had some thirty years of experience, and having seen many other men handle this plant. I have come to the following conclusions for good production of this plant for Christmas trade:

Seeds sown in July or the first part of August will start in three to five weeks. About the middle of November and early in December, when the second leaf has developed, we transplant into flats 2 1-2 inches deep. In February the second transplanting takes place.

By the end of March potting is started; 3 and 3 1-2 inch pots are used. In May, the second potting is done into 5 inch pots; in June and July, the third potting into 6 and 6 1-2 inch pots; in August and September, the fourth and last into 8 and 9 inch pots.

A good compost of sod, cow manure, sand, leaf soil, charcoal, and lime is used. The main feature is good drainage.

Insects constitute the hardest problem to overcome. Mite is one of the worst enemies. Once the plant is attacked, a cure is hopeless.

We prevent infection of mite and other insects by having the flats, pots and table thoroughly cleansed and whitewashed and by regular smoking once a week, and occasional spraying with a nicotine mixture.

Last and most important is the man who has the care. He has to like or, more than that, love the plant. He must provide its wants. Food, water, light, shade, ventilation, and temperatures are important factors.

We give as much light as possible without burning the foliage. Light shading on glass outside and cheesecloth is used from May to September.

If this method is followed up carefully, almost anyone can produce good plants.

---

Quite an interesting discussion followed Mr. Bartsch's paper, a number of questions being asked:

Q.—"What should be done when a cyclamen blooms too early?" A.—Keep the buds picked out until the first week of September and pot on.

Q.—"How should the bloom be picked out?" A.—A clean snapping out is best.

Q.—"What soils should be used?" A.—Use leaf soil first and for later planting chopped sod so that the compost will be a little rough.

Mr. Suckling, Nova Scotia, expressed his appreciation for Mr. Bartsch's exposition. In England, they used to use hot beds, transplanting out of them. He has adopted the same principle here, growing the cyclamen on benches instead of potting. A small grower can grow his early vegetables, clear them out and plant in the cyclamen. By September they are in good shape.

---

Johannis & Robinson, of Springfield, Mass., are erecting a third house in the extensive range put up by them in the southern part of the state. Although Mr. Johannis has won a wide reputation as a rose grower, it is announced that the new houses will be used largely this season for the growing of carnations. This concern promises to become a very important factor in flower production in and around Springfield.

## CHRYSANTHEMUM GALL MIDGE.

The chrysanthemum gall midge is discussed by the Pennsylvania Department of Agriculture in a recent bulletin as follows:

"The chrysanthemum gall midge (Diarthronomyia hypogaea) is one of our most destructive insect pests of chrysanthemums growing under glass. It is an immigrant, coming to us from Europe very recently, and is being rapidly disseminated in this country by chrysanthemum growers who ship infested stock.

"Infested plants, particularly new growths, are so deformed by the gall midge as to be worthless. Its ravages can be overcome, however, by persistent work by the grower.

"First, if possible, start with clean stock. See that all cuttings taken in the fall are free from the insect, and in order to kill any eggs there may be on the foliage dip the cuttings in a solution of tobacco extract containing 40 per cent nicotine sulphate diluted 1 part to 80 parts of water, and to each gallon of the diluted solution add one ounce of fish oil soap, diluting it before adding.

"Growing plants that are infested can be cleaned up only by nightly fumigations for a period of six weeks.

"The adults emerge from the pupal cases in the galls in the early morning hours, and this is the time for effective fumigation, because within a very short time after emerging the adults mate and egg laying commences. Start the fumigation between 12:30 A. M. and 2:00 A. M., then the adults will be killed as they emerge.

"Nicotine paper or hydrocyanic acid gas can be used, preferably the former, as there is no danger from it. One sheet of the nicotine paper to each 1,000 cubic feet of house is a sufficiently strong dosage.

"If hydrocyanic acid gas is used one-eighth to one-fourth of an ounce of sodium cyanide to each 1,000 cubic feet of space is sufficiently strong to kill the adults.

"In small greenhouses or houses where a mixed lot of plants is grown, spraying with tobacco extract containing 40 per cent of nicotine sulphate diluted one part to 800 parts of water, and to which one-half to one ounce of soap is added, will give results. Yellow laundry soap or fish-oil soap can be used. Apply late in the afternoon, being careful to thoroughly cover all the foliage of the plants. The tobacco extract being present on the leaves will kill the adults as they emerge. An application every four days for a period of six weeks will thoroughly clean up the house."

**IRIS AND PEONIES**

Having a large stock of the following Iris will quote special prices for early delivery as I wish to clear the ground: **Arnols, Brooklyn, Darius, Dr. Bernice, Exquisite, Gypsy Queen, Halfdan, Helge, Ingeborg, Jacqueminot, Liabaud, Lord Salisbury, Mme. Chereau, Mithras, Mrs. H. Darwin, Nibelungen, Princess of Teck, Queen of May, Rhein Nixe, Rose Unique, Shakespeare, Sherwin Wright, Walhalla, Walneriana, Ven Geerti, Hector.**

Ask for price list and see what my customers say about the service they receive. Thank you.

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

# George Watson's Corner

"You in your small corner and me in mine."

Sweet peas are becoming a factor in the market again after a two months' vacation on account of the hot weather. It's wonderful how they have picked up in the recent cool spell.

Mr. Akehurst, Jr., of Chas. Akehurst & Son, White Marsh, Md., who have a large area of glass and adjoining acreage, was a recent visitor and had a pleasant trip around Philadelphia outskirts, under the chaperonage of Ralph E. Faust of the Pennock Co. They visited Roeloffs, Southampton, and a number of other places made famous in flower growing in recent years.

Mrs. McWilliams of Pittsburgh was a keen business woman and conducted a fine retail flower establishment. When she passed away she left everything to her old employees, and even added to it a good sized bank balance. In these days of grabbing and grafting, isn't it fine to hear of a thing like that. The weeds are thick along the wayside of life's journey; but once in a while we have to stop and look at some floral gem from nature's generous lap that makes us forget all the rank and weary for many a day. So Mrs. McWilliams shines out to us as a beautiful fragrant flower on the wayside of life, which calls to mind that our old friend Robert Buist of Philadelphia did exactly the same thing some years ago and I'm afraid I've never put myself in print on the subject which I ought to have done. But better late than never.

There are some wise men in the business who are afraid to say what they think for fear it might drive away some old and esteemed customers who think differently. They tell a story about an old Quaker in these parts who made it a point never to say anything bad about anybody, no matter how bad they were. His idea was to keep on the good side of everybody—good and bad—and so increase his business! All very fine. But how could the world progress if everybody did that. Seems to me the fellow to take your hat off to is the lad who has courage to throw his hat into the stagnant pool and clean the water up so it will be fit to drink.

## CARTERS BULBS AND SEEDS

Carters 1922 Bulb Catalogue contains a great many new and meritorious varieties of Spring and Summer flowering Bulbs and Seeds. The catalogue also contains a complete general list of the most popular and reliable varieties at present in demand.

**CARTERS TESTED SEEDS, Inc.**
**53 Barclay Street New York City**

The president of the association asked me the next day how I liked the party. I said fine, glorious. The host and his good lady were wonderful, and the ducks at the duck pond, and the sheep on the lawn, and the trees and streams—say—everything was delightful. The eats and drinks, from champagne to Jamaica, were of the real calibre, and had evidently been saved up. But—I spoiled everything when I said—Louis, I believe at the windup I was the only sober man in the crowd! He said you are a blankety blank liar—didn't you hear how I called down that editorial orator swinging his swallow tails and shouting! So I said, all right—we will call it two out of the 125 then.

At the Craig place at Norwood there is always something you haven't paid particular attention to before—no matter how often you go there. This time it was an improved Adiantum Formosum. First it was gloriosa, which was much easier grown than Formosum, and a better keeper. Now comes an improvement, even on gloriosa. They call it Lemkesi. It has fine long stems, and is very hardy. Grand for cutting from, and just the thing to have handy in a retail place, where there is a bit of greenhouse nearby. The oranges, cyclamen, gardenias, begonias, Jerusalems and many other specialties are in fine shape and busy getting ready for the Christmas hoorah.

Now we come to the Harris place. We have said what we thought of Craig's place. There's but little difference in the things raised; and they stand on a pretty equal footing as to quality and perfection. Ferns, palms, foliage and flowering plants of all kinds. And a very hearty welcome from all hands. You can't afford to miss Harris' when making your little look around for the latest and best. They've even got a little bench of Exacum affine—if you know what that is. It must be forty years since I saw that old ever blooming gem. It's a good one for a window but has to be watered every day.

Dorothy explained all right about this "acute indigestion" that killed Louis Eisenlohr in such a hurry. She said, sure, it will get you 'round the heart; and even back of your shoulders. We love her gray hairs and we respect Aunty Dorothy's opinions; but indigestion back of your shoulder seemed a little hard to swallow. We sugested: how about having it in your big toe; and she promptly told me:—to get out, or you'll lose your train. Also, she added, you've got rheumatism in your big toe already, so that will hold you for a while. There's no use arguing with a woman. She gets the best of it every time.

## AMERICAN ROSE SOCIETY

### Medals Offered for a New Yellow and a New White Rose

At the meeting of the Executive Committee of The American Rose Society held at the City Club, New York City, on September 28th, 1922, the report of the officers showed a membership of over 2700, an increase of over 500 over last year, this increase being largely due to the generosity of a few of the members who last year contributed $1000 for a membership campaign. The new chairman of the membership committee, Mr. J. J. Lane, of New York, outlined plans for further increasing the membership during the next year. Mr. Lane felt strongly that the membership could be more than doubled if a more willing spirit of cooperation could be obtained from the many growers and dealers in roses. With this end in view immediate steps were taken to secure funds to underwrite the 1923 campaign.

The editor reported that the 1922 hand book was complete and would be mailed to the members within the next ten days.

The secretary told of his visits to English and French rose growers during the past summer and reported in some detail the work of the International Rose Jury at Bagatelle, Paris, where on June 15th the French Gold Medal was awarder to the Dutch rose, Elvira Araguay. He spoke also of the new foreign roses, notably of Padre, Ille de France, Mrs. Oakley Fisher and others. He emphasized the need of international rose registration to prevent name duplication, quoting a letter from the Rose Society of New South Wales in this connection. The editor was authorized to enter into correspondence with other National Rose Societies to see if some method of International Registration could be worked out.

The secretary reported that two Washington ladies, Miss Harrison and Mrs. Cuthridge, had offered a gold and a silver medal for a new yellow and a new white rose respectively, which should be originated by a novice, such a rose to be rated at over 85% on the American Rose Society system of scoring. This generous offer was

# Principles and Practice of Pruning

By M. G. KAINS

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The accumulation of new knowledge has become very considerable, especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book as this, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth. This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself, a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery. There are 400 pages in all.

Price $2.50

# Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, $2.25.

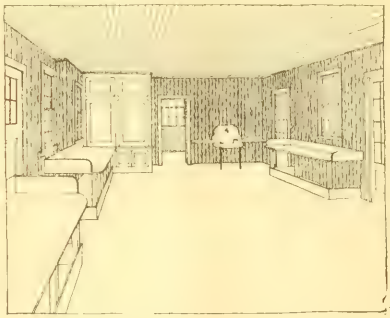
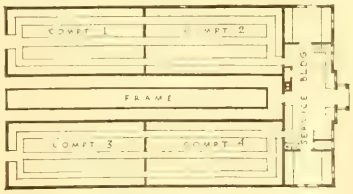
# A Practical Producing Layout At Greenwich, Conn.



Although located on an estate, its sole intention is that of producing the greatest amount, and highest quality of flowers, fruits and vegetables. That's why it was shorn of all ornamental features.

The construction is exactly that used in the commercial growers' houses, where the height of production and profit must go hand in hand.



It was erected for Mrs. M. A. Wilks, daughter of the late Hetty Green.

The work room was designed to give ample space for not alone the potting and packing, but storage room, office for the Superintendent and rooms above for the men.

For the handling of the potting and packing of houses such as these 25 feet wide and 100 feet long, this work room is none too large.

No need to call your attention to the practicalness of the plan or its compactness, or its economy in both working and heating

## NEW ENGLAND

The Quarrey Floral Co. of Worcester opened a branch store in the Worcester market, and are making a special feature of blubs for fall planting

William Wallace Rhuland, florist, of Winchendon, Mass., has been sued for separate support by his wife, and an attachment of $2000 has been placed on his property.

Miss Lena C. Howard of Brockton and Monument Beach won first prize on seedling dahlias at the Brockton Fair. A special prize of five dollars was given Carver & Sampson of Brockton for a dahlia which measured nine inches in diameter.

Arthur C. Comey, Secretary of the Boston Society of Landscape Architects, has been appointed zoning director for the Boston City Planning Board.

## MR. DE VITA'S NEW PLAN

De Vita's Conservatories in Wakefield, Mass., has developed a new plan of selling flowers which is unique and promises well. What is called the Wakefield Flower Club has been formed. The members of the club are to pay dues of $1.50 or $3.00 a week, for which they will receive once or twice a week, as the membership indicates, a bouquet of fresh flowers. Deliveries will be made on Tuesdays and Saturdays. By joining the club members are able to obtain a greater variety of flowers than if they purchased them in the regular way, as Mr. De Vita will know in advance just how many bouquets he has to provide for, and of course will keep in mind the preferences of the members. Naturally the plan will be of considerable benefit to Mr. DeVita himself.

Albert Butterworth, of Main St., Worcester, Mass., has been showing this year one of the largest collections of dahlias to be seen in that city. Most of the newest and most expensive kinds have been growing in his garden this fall.

At the Dahlia Show of the New Bedford (Mass) Horticultural Society, Mr. A. J. Fish exhibited the new dark red cactus seedling which won first prize at the Providence Show.

**"The Laws of Hybridizing"**

**DISCOVERED BY RICHARD DIENER**

A discovery of tremendous importance to everyone interested in plant-breeding and plant life. Any form and size of flowers, fruits and grains can be obtained by application of these laws in the quickest possible way. They are the first workable laws ever discovered in plant and animal-breeding. Included is an explanation of What Plant Life Is; Animal Life in Relation to Plant Life; What Plant Sports Are, and other valuable information. A pamphlet of sixteen pages, elegantly printed and illustrated.

**PRICE, $5.00**

# -HORTICULTURE-

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 189[illegible].

Vol. XXXVI OCTOBER 25, 1922 No. 8

## THE TALK OF THE TRADE

It seems rather incongruous at first, and certainly it is unusual, to hear the buzz of a circular saw in a florist establishment. That is what I thought when I recently visited the greenhouse of Mr. A. J. Schmutz at North Adams, Mass. I soon learned, however, that Mr. Schmutz was making his own boxes for shipping away rooted cuttings and small plants, and when I heard his story concluded that he had hit upon a good idea. Mr. Schmutz grows begonias and snapdragons in a large way, shipping great numbers of them to florists far and near. He had difficulty in finding just the kind of container that carried the plants well, until he began making them himself. Now he has boxes just the right height to carry one layer of plants. The boxes have handles at each end, and are of the right size to be handled readily. They are made from egg crates and similar boxes which are collected at the stores. They are cut out and put together whenever there happens to be a spare hour or two in the day's regular routine.

It is a fact now that Mr. Schmutz has a reputation of shipping plants in better condition than almost anybody else in the trade. It is also a fact that when a shipment was made some time ago to a well known grower near Boston, the boxes filled with plants were packed away in the storeroom. Of course the plants spoiled, but the manager admitted that the fault lay with his people. The boxes when they arrived looked so good that the stock man thought they were a new lot, and packed them away, to be kept until he needed boxes for shipping his own plants.

---

Fred A. Danker of Albany has certainly worked out the dahlia as a money-making proposition as well as anyone I know of. With him it is not a case of growing in quantity and selling them so cheap that it is practically giving them away, but he is elevating the dahlia as a cut flower and handles it in a way that it is a credit to himself and to the dahlia at all times.

He has a list of varieties, both named and unnamed, some new and some of the old stand-bys, but handles them all profitably and has nothing but the best. And while on that subject, it is interesting to know that the old variety A. D. Livoni is one of the popular sorts with him, and when handled as I saw it by his designer, I don't know of any variety that makes up more attractively in sprays or baskets than that old time favorite.

Mr. Danker thinks very highly of a hybrid Cactus Field Marshal, a beautiful yellow, and also Frau Scheff, a fawn, and Mrs. Carl Salsback, a pink.

---

I am beginning to think that the rose grower is rapidly approaching the time when he will find Columbia in over-supply. It is perfectly natural that there should be a large quantity grown. Taken on an average, there is not a rose grown under glass that has the same good habits and gives the same good results to one and all as Columbia. But the grower will have to watch out that the supply is not made top heavy.

Speaking of Columbia brings to my mind again the rose which A. N. Pierson, Inc., have named Mrs. Warren G. Harding, a sport of Columbia. It is simply a dark Columbia, getting close to the color of Premier, and has many points to commend it. That means of course, every good point that Columbia has, and from what I have heard and seen it has the additional good point of not throwing so many crippled buds.

We have gone far enough in the season now to mention again the new rose Commonwealth. I have seen it in a number of places, and have always found it doing well. This variety appears to me to be a quick grower, clean and healthy, and I see no evidence of blind shoots. I have a great wish that Commonwealth will do well. There is a place for it and its future is promising.

---

W. W. Hannell of Watervliet, N. Y., is a grower who needs to take his hat off to no one in the way of Erica Melanthra. He has several houses of

Style of Shipping Box Made and Used by A. J. Schmutz of North Adams, Mass.

as perfect stock as I have ever seen, ranging all the way from 15" above the pot to 40", heavily set with buds, nice stocky plants, not thin and skinny.

Florists often do not realize the money making possibilities of Acacia. Charles Beasley at his greenhouse in Quincy has a wonderful specimen of Acacia pubescens from which he sold three hundred dollars' worth of blooms last season. In spite of that fact he expects to sell it when a good offer is made because he needs the space. The plant now stands at one end of the carnation bench. It reaches to the top of the house and has a wide spread on both sides. Its growth is exceedingly thrifty for it stands in a half barrel where it can be readily fertilized and watered. It is doubtful if there is a more perfect specimen of this variety to be found anywhere in New England.

Close by is a specimen of Acacia Bayleyana. This tree, which is even larger than its mate, is to be kept in the greenhouse. With its silvery foliage and its fine habit it is a handsome plant to look upon.

Many nurserymen and others who have tried to propagate Azalea Schlippenbachii have reported great difficulty in transplanting it. According to Mr. Judd, propagator at the Arnold Arboretum, the difficulty lies in the fact that the work is undertaken in the spring. It has been found at the Arboretum that the fall is the only time of year in which Azalea Schlippenbachii can be transplanted successfully. It does not have two growing periods, like many other azaleas, and ordinarily starts to grow very early in the spring, so early that if moved it is certain to have its growth checked.

Some nurserymen have transplanted it for several years in succession, only to have the plant stand still, making practically no growth at all. If they had tried transplanting in the fall, they would have had no difficulty. About a hundred plants have been set out in the open ground in the Arboretum this season, while fifty more have been potted up, and about six hundred have been set out in the nurseries.

The Idle Hour Nurseries, of Macon, Ga., have issued an advertising booklet which seems to me of unusual value. It is put up in such a form that it is easy to handle and the various kinds of plants are divided in a very convenient manner. The first page is given over to a discussion of the telegraph order business, for in spite of its name this concern handles cut flowers as well as nursery stock. The prices are given of cut flowers for all seasons of the year, the months being specified.

Prices are given for bulbs in October, and for special plants for Christmas sales, for Easter sales, for weddings and for bedding plants.

Customers are advised that they should place their orders at least a week in advance when flowers are wanted for graduation day, Easter, Thanksgiving day, New Year's Day and other special occasions, but it is specified that ten days are required at Christmas time, and the statement is made that advance orders at Christmas time are not subject to countermanding. For convenience of the customers the store is kept open two hours on Sunday morning.

It is seldom that a more complete booklet, so far as the business of the florist is concerned, has been issued.

The Brunswick-Kroeschell Co., of New Brunswick, N. J., and Chicago, had a very happy thought when it conceived the idea of making reprints of the papers recently prepared and read by prominent wholesalers and retailers on the subject of mechanical refrigeration. The little pamphlet ought to be of immense value to every florist interested in getting rid of the annual ice bill. I know of no other way in which so much valuable data can be obtained in a small compass. Fred Lautenschlager, manager of the greenhouse department of the Brunswick, Kroeschell Co., tells me that he will gladly send copies to anyone who would like to have them.

## BOSTON

Lectures on orchids and poultry will feature the November and December meetings of the Gardeners' and Florists' Club. The nomination of officers will be made on Nov. 21.

The annual fall exhibition of the Massachusetts Horticultural Society will be held Nov. 4 and 5. Special features will be Chrysanthemums, Winter Flowering Begonias, groups of plants and fruits. Mr. C. H. Totty of Madison, N. J., will lecture both afternoons on the "Culture of Hardy Chrysanthemums."

Penn the Florist did the decorating for the Horne-Phelan wedding, one of the big society events of recent weeks. It was a church wedding and chrysanthemums, autumn leaves, and palms were used for the general decorations. There were also elaborate decorations at the house. Mr. Fred Maxwell was in charge of the work.

Woodman Bros. have nearly finished a new greenhouse at East Milford, N. H. The new house is 40x28 feet.

## JELLE ROOS BUYS MORE LAND

Jelle Roos of Concord, Mass., already one of the largest gladioli growers in the country, has bought another farm, which contains 70 acres of land and will extend his operations still further.

## PLANT GROWERS ADOPT NEW CREDIT RULES

On November 1st, 1922, the new credit rules of the New York & New Jersey Association of Plant Growers will become effective. All merchandise sold after that date will be on the new credit basis.

Under the new system all merchandise will be billed on the first day of the month following delivery. One month thereafter, if the account remains unpaid, a statement will be rendered with a notice to the effect that unless the account is paid within ten days the customer will be reported as a delinquent. If the account remains unpaid for an additional ten days the customer will be reported as a delinquent and his credit will cease and sales will be made on a cash basis only until the account is reported paid.

The members of the Association feel that this new credit ruling will be for the mutual benefit of the growers and their customers and will establish uniformity in the matter of credit in their branch of the trade.

WILLIAM H. SIEBRECHT, JR.,
Secretary.

## SCRANTON FLOWER SHOW

Scranton's (Pa.) second annual flower show will be conducted at the 13th regiment armory on November 7-8-9-10, it was announced following a meeting of the Scranton Florist club at the Elks' club rooms. Nearly $1,000 in numerous cash prizes will be awarded to exhibitors of the most beautiful plants and cut flowers. Three judges, well known plant growers, have already been appointed by the Florists' club to judge the pieces exhibited. They are: S. S. Pennock, of Philadelphia; F. J. Baker, of Utica, N. Y., and Anton Schultheis, of College Point, N. J.

## BOSTON FLOWER MARKET PLANS

No actual work has been done as yet on the old Cyclorama Building which has been bought by the Boston Flower Market, Inc., and which is to be remodeled, but plans are being prepared and doubtless will soon be completed. Great care is being exercised to have these plans exactly right, and for that reason they are being revised and changed as new ideas are presented.

The annual meeting of the Market Association will be held at the American House at 8 o'clock Saturday evening, and at that time the whole matter will be reviewed for the benefit of those present. It is announced that there will be no refreshments this year, the meeting being entirely for business purposes.

## BULB CONFERENCE CALLED

A conference to consider the importation of bulbs into this country, some of which are now prohibited, will be held at Washington, Monday, Oct. 30, at 10 a. m., the United States Department of Agriculture announces.

## DEATH OF MRS. MINNIE DAWSON BLOSSOM

The sudden death of Mrs. Minnie Dawson Blossom at her home in Dedham, Mass., is reported. Mrs. Blossom was the daughter of the late Jackson Dawson, of the Arnold Arboretum, and the wife of a well known landscape architect. She was forty-four years old.

## GENERAL NEWS NOTES

An item is going around in the press to the effect that N. P. Lindberg, the originator of the slogan "Say It with Flowers," was recently killed in an auto accident in North Dakota. Apparently there are some people even yet who have not learned that it was Maj. P. F. O'Keefe who actually originated the famous slogan.

Charles L. Rischer, a well known florist of Atlantic City, has opened a new retail store at 1622 Pacific Ave. It is a very handsome store, the interior decorations being done in silver gray. At the rear of the store is a fifty-foot greenhouse.

The twenty-fourth Annual Exhibition of the Tarrytown Horticultural Society will be held at Music Hall, Tarrytown, N. Y., November 1-3. These exhibitions are always unusually well staged and largely attended.

## THE FLOWER MARKET

It has been a seller's market for the last week. Mr. Charles Margolis, buyer for the Henry Robinson Co., said that he has not known so great a scarcity at this season for at least twelve years. At the present time, however, flowers are coming in more plentifully, but prices remain high. There are plenty of white chrysanthemums, but yellow "mums" are still short. Carnations are selling for three and six cents; roses for eight, ten and twelve cents; snapdragons are short, and not very good, but bring fifty to seventy-five cents a bunch. Delphiniums are badly wanted, and seventy-five cents to a dollar is being paid for them. First quality yellow "mums" have sold as high as $6.00 a dozen within the past week. Four dollars a dozen is a fair price. White "mums" bring considerably less. Violets have been unusually scarce and have brought $1.50, but the supply is increasing and the price dropping.

## NEW ENGLAND NEWS NOTES

It has been announced that Wallace R. Pierson, of Cromwell, Ct., will be a candidate for the State Senate. If elected, he is certain to make an energetic legislator and to keep things moving on Capitol Hill.

F. W. Johnson has established a florist and greenhouse business at 1667 South Main Street, Campello, Mass., where he has a well equipped plant.

Much sympathy is expressed in the trade for the widow of Herbert F. Calder, whose sudden death occurred recently at his home in Norwood. Mr. Calder had carried on a wholesale florist business for many years, and was particularly well known as a chrysanthemum grower.

## PENNSYLVANIA'S BIG SHOW

The ninety-fourth annual flower show of the Pennsylvania Horticultural Society will be held this year in the Academy of Music, Broad and Locust streets, on Nov. 7, 8 and 9.

Plans now being formulated to extend the scope of the exhibition beyond those of former years are under the direction of a special Show Committee.

Co-operating with the Horticultural Society this year will be the Garden Club of America, which by the action of Mrs. Samuel Sloan, the national president, has appointed Mrs. J. Willis Martin, of Chestnut Hill, as the club's representative in this city for the show. The local groups affiliated with the Garden Club are the Philadelphia Garden Club, of which Mrs. Bayard Henry, of Germantown, is president; the Gardeners of Montgomery and Delaware County, of which Mrs. William T. Elliott, of Ardmore, is president, and the Weeders' Society, of which Mrs. Howard Wood, of Conshohocken, is president.

Exhibits will also be sent to the show from nearby sections of the State, from New York, New Jersey and Connecticut.

## NOTES FROM THE GALVIN STORES

Thos. J. Galvin, Inc., of Boston and New York, is carrying a good stock of the new rose Commonwealth, originated by Alex. Montgomery, at Hadley. The staff of the Boston stores say that the new rose has already become a pronounced favorite and seems likely to become a splendid addition to the rose family. It is also reported that American Beauties coming in of late have been of very fine quality.

This firm has had a lot of work recently in arranging decorations for weddings. These contracts have spread over a wide territory and some of them have required a large number of flowers.

Some very handsome Cibotiums have been used in restocking the Copley Square store, where they seem particularly at home. They are being substituted almost entirely for palms, which have not proved very satisfactory. Cibotiums seem to fit in much better with the type of architecture used.

A new Reo truck has been added to the firm's delivery service. It has been handsomely painted, and made a fine impression when first seen on the streets a few days ago.

# Eldora --- Eldora

*This New, White and Pink Variegated*

# Carnation

has proven so eminently satisfactory in every way that I shall distribute it to the trade this season, instead of next, as I had contemplated at first. I consider **ELDORA** a decided improvement over any variegated Carnation. A truly commercial variety. If I did not consider it such, I should not undertake to send it out. It is of good commercial size, very prolific, making no useless grass, with fine, strong stem, and it will not split.

**ELDORA** ships well and is a grand keeper

Come and see 15,000 fine plants growing at Cliftondale.

*Orders taken now for rooted cuttings*

$15.00 per 100; $125.00 per 1000; 250 at 1000 rate

**CLIFTONDALE, MASS.**

### DEATH OF O. P. BECKLEY

There are people all over the country who will be grieved at the death of Oscar P. Beckley, head of the Berryhill Nurseries, at his home in Harrisburg, Pa. His death, at the age of 42 years, came after a breakdown which he suffered in July.

One of the founders and president of the Berryhill Nursery Company, with nurseries not only in this city, but in Sparta, Ky., and in Springfield, Ohio, Mr. Beckley's influence in the extension of park and landscape development in eastern cities was considerable. He was famous throughout the country for his landscape photography and many of the pictures which are particularly well-known were made in Harrisburg, subjects of ground which he had laid out.

He was not only an expert photographer, but his familiarity with plant life and his love of nature made him extremely valuable with those who had work of this kind today and some of the rarest and most beautiful views of roses, iris, peonies, dahlias and the like in the collection of the McFarland Press are his work.

### ST. LOUIS FALL FLOWER SHOW

A very complete premium list has been issued for the St. Louis Fall Flower Show and the annual exhibition of the Chrysanthemum Society of America, which will be held in St. Louis Coliseum Nov. 7-12. The St. Louis Flower Show Association, the Chrysanthemum Society of America, the Missouri Horticultural Society, the Missouri State Florists' Association, the St. Louis Florists' Club and the St. Louis Garden Club are co-operating to make the event a great success. The Coliseum is an ideal place for a show of this kind and a great number of entries has been made.

### MR. HAMMOND'S GOOD WORK

Mention was recently made in HORTICULTURE of the work of Mr. Benjamin Hammond, of Beacon, N. Y., among the young people of his community. In this connection it is interesting to read that at the Commencement Exercises of the High School Mr. Hammond was given a loving cup under very pleasing circumstances. Dr. C. C. Gaines, president of the Eastman Business College, made the presentation speech, and paid a high tribute to Mr. Hammond, who is president of the Board of Education. The cup is of solid silver, and bears the inscription: "From the Children and Citizens of Beacon, to Benjamin Hammond, thirty-three years president of the Board of Education, in appreciation of his long and constant service." It is pleasant to find that a man as active in business as Mr. Hammond can also find time for service to his community and the rising generation. Mr. Hammond is a distinct asset to the S. A. F. of which he has long been a prominent member.

### MORE ABOUT BUTTONHOLE BOUQUETS

Rochester, N. Y., Oct. 16, 1922.

Editor Horticulture,

Dear Sir:

That was a very interesting paragraph that you reprinted from the English HTJ about wearing buttonhole bouquets. It used to be a well-nigh universal custom in England where it was said that the first thing an Englishman did after having his morning tub and shave was to get a flower for his coat-lapel. The habit seems to have been dropped; but that is because for five years so many Englishmen were in uniform.

In London, I saw something that greatly impressed me. One morning I was walking down the Strand rather early, and I saw a man selling newspapers stop and buy a penny flower for his buttonhole. Now, he was far from being a beau; he was poor and poorly dressed. His pennies must have been important to him. His coat was not only shiny, it was threadbare and out at elbows. But he spent a penny for a flower to wear. I have often wondered about that man. I should like to have known him. I imagine that his wife wore a smile; I rather think that his children are apt to make good citizens. I think that little circumstance was a sort of index to the home and atmosphere in which his family lived. I wonder?

We don't use anything like the quantity of flowers the English use. They have them in their hotels and even in their restaurant-cars on the trains. We use them to some extent in our better hotels but not always tastefully. For example, I was lunching lately at a delightful hotel and there were flowers on all the tables; but I had to ask the waiter to let me change ours; there were white anemones and yellow and golden marigolds; but the effect was spoiled by the inclusion of some lavender cosmos. That is an impossible color combination and I had to risk the waiter's dislike and re-arrange the flowers or else have an otherwise delightful luncheon spoiled.

And the English were first to realize the absurdity of having an orchestra to play between the acts at the theatre, just as Mr. Belasco was our first manager to win our thanks by banishing the orchestra from his theatre. But the English did more, for they filled the orchestra space with great masses of flowers and decorative plants. In our own theatres, we seldom see any flowers except those forehandedly bought by the primadon-

na to be handed over the footlights for publicity purposes. And yet the use of flowers here is growing and will continue to grow. Which will not only be profit for those who grow them but profit in a finer way for those who have them.

Sincerely yours,
JOHN WATSON.

## QUARANTINE CHANGE

### Imported Plants May be Freed from Earth by Other Means than Washing

Secretary of Agriculture Wallace has approved an amendment to regulation 7 of the regulations under Quarantine 37, providing for the freeing of imported plants from sand, soil, or earth by "washing or other means." The requirement hitherto has been that such plants shall be thoroughly freed from earth by washing. The condition of freedom from sand, soil, or earth is, however, to be strictly maintained. The amended regulation will shortly be distributed to importers and others in interest.

This action was taken as a result of an informal conference of the Federal Horticultural Board, October 3, with the advisory committee of the American Association of Nurserymen. It was represented by the conferees that the washing of the roots, particularly of certain classes of plants, as performed abroad, was a source of injury to importations and of considerable losses. Many instances of such injury were presented. The importers were convinced that it would be more practicable to permit the removal of earth by shaking or other means where such removal could be thus effectively accomplished. As a result of a full discussion of this subject the Board agreed to the modification of the regulations now authorized.

Hereafter all importations must as hitherto be freed from sand, soil, or earth by washing or other means. In other words, the condition of freedom from sand, soil, or earth is to be strictly maintained. Any importations not so cleaned will be refused entry. The advisory committee of the American Association of Nurserymen has given hearty agreement to this action. The membership of this committee includes J. W. Hill, Chairman, of Des Moines, Iowa; Paul C. Lindley, Ex-Officio, President of the American Association of Nurserymen, Pomona, N. C.; C. H. Perkins, Newark, N. Y.; Harlan P. Kelsey, Salem, Mass.; and M. R. Cashman, Owatonna, Minn., all of whom were present except Mr. Cashman.

CHOICEST STRAIN

# GLADIOLI FOR FLORISTS

## Varieties Which Mr. Cogger Recommends That May Be Used For Cut Flowers

In a recent conversation Harold Cogger, son of Thomas Cogger, the well known gladiolus grower of Melrose, Mass., and associated with him in business, was asked to give a list of twenty varieties for florists or others who want particularly to grow gladioli in a commercial way. This list was to include popular varieties for which there is a call, but with only a few, if any, high priced novelties. The list which Mr. Cogger gave is as follows:

America, soft flesh pink; Bernice, light yellow; C. M. Kelway, pale shell pink; Europa, snow white; Evelyn Kirtland, light rose paling to shell pink with scarlet blotches; Gretchen Zang, rose pink with deep salmon blotches; Halley, salmon pink; Herada, pale mauve with deeper throat markings and making immense blooms on tall straight spikes; Loveliness, cream color with exceptionally large flowers; Mrs. Francis King, light scarlet with flowers opening very wide; Mrs. F. Pendleton, salmon pink with a carmine blotch and a very large expanded flower; Myrtle, pale rose and a particularly strong grower, carrying five or six open flowers at a time; Niagara, creamy yellow with a primrose throat and very large blooms; Panama, large wax-like flowers of clear pink; Prince of Wales, salmon rose and blooming very early; Red Emperor, extra large flowers of bright scarlet; Schwaben, pale canary yellow; Pearl, soft pink with extra large flowers; Wilbrinck, flesh pink, very large blooms on strong stems with four or five flowers open at a time; Mrs. Helen Franklin, a new ruffled variety, pure white with violet markings, a variety which has five or six flowers open at a time, which blooms early and is a good multiplier; Mrs. Dr. Norton, creamy tinted with light pink petals and yellow center; Mrs. L. S. McLeod, lavender with a blotch of white.

This gives a list covering a long season and most of the good colors. Mr. Cogger would also urge the beginner to start with a number of primulinus hybrids. Asked about several varieties commonly recommended, he gave his reasons for omitting them. Mrs. Watt, a striking clear crimson red, he said that it was impossible to depend upon each year. It sometimes comes well and sometimes does not. Glory of Holland he excluded in spite of its beauty because it has a tendency to blight. Willie Wigman, a very handsome blush white variety, was not mentioned, he said, because the bulbs were very hard to get.

James Neal, of Amesbury, Mass., has been raising seedling dahlias for several years. Among the new seedlings which are particularly promising are Mildred K. Neal, Annie L. Warren and Rose Neal.

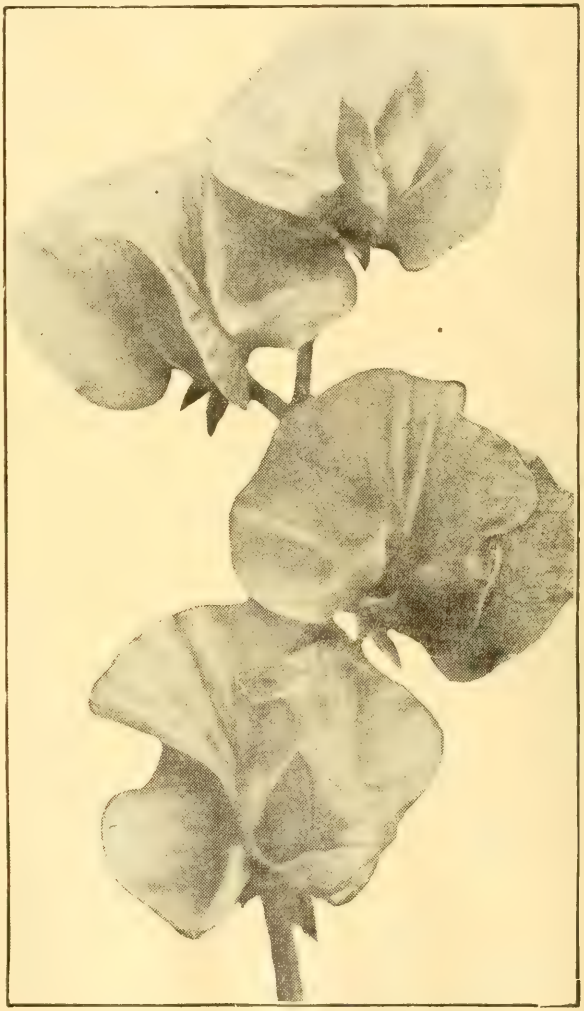
# RAMBLING OBSERVATIONS OF A ROVING GARDENER

Here and there as one reads the literature of horticulture he runs across many interesting ideas, some of which may give him food for thought and others which he will doubt from the beginning. I read recently that a good way to ensure working the soil when growing gladioli is to sow plenty of weed seed among the bulbs. The writer argued that the grower will be kept busy preventing their growth by using the hoe or cultivator, and thus make certain of stirring the soil around the "glads." There is no question but what under such circumstances one would be certain to have either a good garden or a mass of weeds, and yet the practicability of the scheme can well be questioned.

The fact is that the whole story as to the cultivation of the soil is not known as yet. Discoveries and some of them important are being made. One recent enperiment made on a large scale has shown that what is generally regarded as cultivation proved undesirable in the growing of sweet corn. In one patch the corn was cultivated in the usual way, working the soil an inch or two. In another patch a tool was used which simply sheared off the weeds as they appeared without breaking up the ground except a very thin layer on the surface. The yield from this patch was much larger than from the one where cultivation was practiced.

Other experiments have shown that many plants grow their roots close to the surface and that cultivation destroys large numbers of them. There is an opportunity for further investigation here as regards most of the common crops.



---

I read the other day also that Portland cement makes an excellent fertilizer. It is stated that Portland cement has been shown to give a decided improvement in the quality of gladioli. It was tested with a variety which is ordinarily a poor keeper. When Portland cement was used as a fertilizer, however, not one corm was lost during the storage season. The writer of this note intimated that he was likely to use cement in largely increased quantities.

It may be that a discovery has been made here which will be of benefit to flower growers as a whole. But the chances are that a careful test would prove that a much greater benefit could be obtained from certain commercial fertilizers at the same cost. I believe that growers as a rule have overlooked the value of acid phosphate, and that they would gain much by a more liberal use of this fertilizer. However, if they feel like experimenting with Portland cement, it won't cost them very much. I am curious to know what would happen if a hard rain followed a liberal application of the cement. I suspect that the owner of the plants would find them well anchored to the ground.

Seldom has a new sweet pea been received with as much interest as the President Harding being put out by the W. Atlee Burpee Co., of Philadelphia. Of course the name has helped to advertise it, but the flower itself has made a sensation wherever seen. Its new shade of cerise, suffused with orange which seems to sparkle in the sunlight, is most attractive. Then, too, the flowers grow extremely large. Although the blooms were developed on the Floradale Farm of the company in California, they have been tested on the Fordhook Farm near Doylestown, Pa., and have proved just as satisfactory in the east as in the west.

Evidently it's a sweet pea which adapts itself to all situations, for in

The New Burpee Sweet Pea, President Harding

England it is grown just as well as here. In fact, its outstanding merit was so great that the National Sweet Pea Society of Great Britain gave it the highest award after a trial in which 106 new varieties from many countries were entered. This is the more noteworthy because it is the first time that the award has gone to a sweet pea grown ouside of the British Isles. The Burpee pea won on four points, color, size of flower, number of flowers on the stem and sturdiness of growth. Under the circumstances the Burpee people concluded that they had a variety which was well worth bearing the name of the nation's chief executive.

Visitors to the Brooklyn Botanic Garden have been much interested in the collection of perennial asters to be found there this season. This collection was brought from England last year by Montague Free, who is the head gardener, and who is also treasurer of the National Gardeners' Association. There are about 75 varieties in all, running through various shades of purple, blue and pink, and there are also white varieties. The plants came originally from the country estate of the Hon. Vicary Gibbs, and when they reached this country were set out in beds bordering the east side of the walk leading from the Laboratory Building to the Children's Garden.

A variety which excites particular attention is King George, which belongs to the amellus type. This form comes from Southern Europe, and is not as tall as the asters native to New England. King George has pale blue petals and blooms rather early. If I am not mistaken this variety has been distributed in a small way by a few of the nurserymen in this country, but has not become as well known as it deserves. In fact, there seems to be a general failure on the part of American gardeners to recognize the value of the amellus varieties.

## CHANGES AMONG GARDENERS

Gustaf E. Karlson has become head gardener on the H. A. Hayward estate at Franklin, Mass. He was formerly with Mrs. Adele D. Thayer of Franklin.

J. H. Snyder has become superintendent on the estate of Colonel E. H. R. Green, at Dartmouth, Mass. Mr. Snyder was formerly on the estate of the late General Charles A. Taylor at Buzzards Bay.

Charles A. MacKay has become superintendent of Greystone, the estate of Mr. Samuel Untermyer at Yonkers, N. Y. Mr. MacKay succeeds Albert Millard, who recently resigned.

King
GREENHOUSES

The consistent growth of the King Construction Company since its organization twenty years ago is a testimonial to the unvarying quality of King Greenhouses. Built with an eye to permanence, of the best quality of workmanship and material the reward has been the confidence of the growers who want the best in greenhouse construction and service.

The superior quality and low cost of King Greenhouses will interest you. Write for the bulletins on semi-iron, pipe iron frame and steel frame flat rafter houses. We'll send them without cost or obligation immediately upon receiving your letter.

*When you think of good greenhouses, think of KING*

## NURSERY COURSE AT AMHERST

The special course for nurserymen which was carried out so successfully at Massachusetts Agricultural College last year will be repeated this winter. The school is conducted co-operatively by the New England Nurserymen's Association and the College, assisted further by the State Nurserymen's Association of Massachusetts and Connecticut. The term begins January 2, 1923, and runs for ten weeks. There will be courses in horticultural botany, soils and fertilizers, nursery practice and landscape construction; also a course of special lectures by practical nurserymen. Applications for registration or for further information should be addressed to Professor Frank A. Waugh, Amherst, Massachusetts.

## CORNELL SHORT COURSE

In order to assist young men who cannot come to the University for the regular four year course the Department of Floriculture at Cornell University is again offering a short course in floriculture covering a period of twelve weeks.

For those especially interested in commercial floriculture two highly specialized courses are offered. One course will consist of a thorough study of the culture of cut flowers and greenhouse plants for wholesale and retail markets. The arrangement of flowers and the methods employed by the progressive florist in conducting his business will also be considered. Greenhouse construction and maintenance of commercial establishments will be dealt with in the second professional course; also location, cost, heating and the drafting of specifications. In addition to these courses students are required to register for agricultural chemistry, soils, plant disease and injurious insect pests, all subjects which are of utmost importance in plant culture. The student may also elect courses in gardening and garden flowers, landscape planning and planting or plant breeding.

A booklet descriptive of all the courses given during the winter months in the College of Agriculture will be sent upon request by addressing Professor E. A. White, Department of Floriculture, Ithaca, N. Y., or the Secretary of the College of Agriculture, Ithaca, N. Y.

**The F. T. D. Convention** As was to be expected, considering the men who had it in charge, the F. T. D. Convention at Baltimore was carried through without a hitch. Certainly this organization has set a new pace when it comes to conducting meetings of this kind. Every session was packed with good things, and not a delegate who attended went away without feeling that he had received enough new ideas to more than pay him for all the effort and expense required by his journey.

Perhaps the most momentous measures adopted were the clearing house and the organization plans. These are yet to be tried out, of course, and some doubt as to the practical nature of the clearing house scheme was heard, although the vote was unanimous. The general impression seems to be, however, that the clearing house plan will be of much benefit to the trade by eliminating a vast amount of bookkeeping and office work.

Pres. Philip Breitmeyer might easily have been re-elected. In fact there was a strong effort to keep him in office, but with a characteristic impersonal viewpoint he urged a change, believing that the organization should be kept on as democratic a basis as possible. Edward Sceery, of Paterson, N. J., to whom the election then fell, is a man who has done much for the F. T. D. and for the florist trade in general, and who is looked upon as a first-class executive. He will bring to his office all the business acumen which has made his personal enterprises a success. Mr. Fred C. Weber of St. Louis, who was elected vice-president, also stands very high in the trade. Secretary Albert Pochelon and Treasurer Rock were re-elected as a matter of course. It would be hard to find anyone to take their places.

There was no surprise in the fact that St. Louis won the next business meeting practically without opposition. The campaign which the St. Louis florists made at Toronto last year was well remembered, and no other city cared to enter the lists this time.

The Baltimore members of the trade proved themselves the best of hosts, showing the fine southern hospitality for which they have long been famous.

In the past few years the F. T. D. has come to be an organization of remarkable influence. What it has accomplished has been beyond the expectation of even its most sanguine backers. It has proved of tremendous value in extending the business of the florist trade and in giving it a solidity and permanence which it had lacked and which will do much to guarantee its future.

**Quarantine Reprisals** There has been a general feeling of apprehension in certain quarters that actual and drastic reprisals would be made by European countries as a result of the injuries done to their export trade by Quarantine 37. That the matter is already beginning to simmer pretty briskly across the water may be judged from the following article written by a correspondent of the Horticultural Trade Journal, of London.

> I have met recently a number of Americans about to return to the States who were sorely displeased that they cannot place orders for plants they have seen while visiting nurseries and gardens in this country because of their Government's prohibition, and it has been driven home to me that the prohibition is hurting our trade tremendously by reducing our output just at the time our renewed production requires increased demands, and perhaps even more so by the effect it is having upon the voluminous importation of European nursery stock of all escriptions. Protest and appeal on our part seems futile, but there is one thing yet that could be done if the whole of the horticultural industry of this country stood shoulder to shoulder in the common defence of its own livelihood. It should be decreed and rigidly adhered to that while no plants can be exported by us to America we will not import a seed from them. It would no doubt be inconvenient for us to do entirely without American seeds, but it is far from an impossibility, and it is worth while enduring much inconvenience for a while to bring home, as nothing else will do, to the American Authorities that International Commerce can never flourish on a one-sided policy. The difficult point is that seed merchants cannot see why they should take up the cudgels for the defence of the nurserymen, but with a little thought it should become patent to all that the seed trade would suffer tremendously if the nursery trade went under.
>
> Export of plants to America is not in itself a sufficiently important factor that we may say it controls the destiny of the British Nursery Trade, but a small pin may sometimes be required to hold a big rod in position to drive the fly wheel of a big machine, and the export of plants to America just now is a pin that is very essential to the running of our business machinery.
>
> I reason it out this way. The spending power of all classes in this country is at a low ebb. It is as much as we can hope to do to sell enough of the plants we are growing to keep upevena moderate pace of progress, but because of the American prohibition we are saddled with far too much Continental stock, the distribution of which reduces the output of our own productions. Thus, even apart from the advantage of sending some of our own stock to America we should be rid of a great deal of Continental stock that is at present being distributed instead of our own productions among our customers.

# GRAFTED ROSES

It may seem early to talk roses for next spring, but we have been booking a lot of spring orders and you, who may be wanting a big lot early, may feel disappointed if we are not able to give you what you want when you want it.

Take up the question of spring requirements early!

**A. N. PIERSON, Inc., Cromwell, Connecticut**

# FLOWER COMPETITION

## How the Market For Outside Flowers Was Swamped the Past Season

Answering a question in a recent number of the Rural New Yorker, Mr. Elmer J. Weaver, the well known Pennsylvania florist, touches upon a question which is of no little interest both to florists and to amateur growers. It is a question of competition between the business florist and the man who grows flowers as a side line. Mr. Weaver writes:

Several years ago outdoor flowers sold on nearly all markets at a price that left the grower a good profit over expenses. I have a man in mind who planted a small area of asters, just a bed in his garden, and sold $115 worth from it. This was too good to keep, so in the following year some of his neighbors planted quite a lot, and he increased his area. They brought a fair price last year, and more farmers in this vicinity planted asters; one not many miles from here planted 16 acres. When these aster areas began producing there was little mountains of flower boxes at our railroad station each morning going to the city. In a week the market was so badly overstocked that in self-defence the commission men in the cities simply asked the farmers to discontinue shipping. The result has been that almost their entire crops were not marketed, for the simple reason that there was not enough business to absorb the enormous surplus. The same condition has obtained in regard to Delphinium Belladonna, an easily grown perennial, and one of the best all-round summer cut flowers on the list. Men who had a very small area previously have planted acres and acres of it, till the shipments have been far in excess of the possible sales.

Gladioli are another flower of which millions are grown each season, and with the exception of the early season forced stock the prices have ruled very low, even as low as $5 to $7 per 1000 on some markets. Compare this with the cost of the bulbs, the lowest of which sell for about $20 per 1000. This overstocked condition started with the advent of the outdoor flowers, and on Thursday, September 14, I was in Philadelphia, and the wholesale florists there were simply jammed with flowers from floor to ceiling in the large cold storage rooms 12 to 15 feet high. This has been the condition without let up all this summer.

Now this is simply a plain statement of conditions the past summer. We florists hope we may never see another like it, but I am very much afraid we will, especially if farm produce does not bring higher prices. Many farmers will consider even a very small income from flowers as a side line as just that much more cash on hand. The fact that income does not meet cost of production on all the other crops does not enter into the calculation, as the cost of production on all the other crops is away ahead of the returns. This puts the man who depends upon summer flowers as a large portion of his livelihood at a serious disadvantage. It is for the consideration of such people that I am writing these facts so fully. Personally, we shall not plant any more flowers to help this condition along. There is always the chance of a reaction in these matters. Many growers become disgusted with the low returns—or no returns at all—and quit.

## SIX-SEVEN-FIVE

### A Boylston Street Number to be Remembered by Farm & Garden Association

Within a few days the New England Branch of the Farm & Garden Association will have opened its new headquarters at 675 Boylston Street where, because of the better location and much more available space, it will be able to largely increase its activities. This Association is bridging the gap between women in the country who have home-made articles to dispose of and women in the city who are keen to obtain articles of this kind for use in their homes. The work already done has been of tremendous value, and will be increased many fold under the new and more favorable conditions.

The new venture is really the outgrowth of the Christmas markets, which the Association has conducted for several years. Because of the opportunity offered by the Association, one woman in Maine has increased her income three or four hundred dollars a year by the sale of hulled corn. A woman in Vermont is putting her brother through college by the sale of honey. Other instances might be multiplied to show what is being done. In the new quarters there will be a salesroom where the goods made by country women will be offered. Several prominent women are interested in the undertaking, including Mrs. George U. Crocker, Mrs. James D. Colt and Miss Marian Roby Case.

## HANDLING SALES

### How Orders are Put Through at the Penn Store

Mr. Henry Penn of Boston presented an unusually helpful paper at the F. T. D. Convention in Baltimore, describing the methods of doing business followed in his store. What he had to say about the selling end was particularly valuable. In part it was as follows:

"Our salesmen write out the specifications of each order and then turn in the order sheet to the cashier, who has a very convenient booth, easy of access, where the order starts on its way. Whether it be a charge, cash or C. O. D. sale it is properly cared for by the cashier who files it in its proper place. All order sheets are put through the cash register immediately the sale is made and are rung in duplicate so that we have one sheet for office reference and the other for the clerk who will look after the same. For instance, all cut flower orders are selected by a special employee who attends to nothing else but selecting the orders as specified and placing them in readiness for the packer and his assistant, who do nothing else but the packing. We have found that we can do our work with greater despatch by having each one in the store attend to a definite job.

"At the rear of the store we divide the counters in this manner:—Order clerk's table, parallel with this the packer's table, and next in line the shipper's table, with the exit at the latter's immediate left ready for the truck. By having these three tables parallel and close to each other we are able to speed up our work.

"When the clerk has selected the flowers he places them with the original order sheet attached on the packer's bench, the latter then carefully packs them and places the box with the order sheet still attached on the shipper's bench. The original order sheet remains with the order until the driver is ready to start on his trip, when the shipper removes it and it is returned to the cashier. Through this simple operation we have overcome one of the greatest handicaps of our business.

"Orginally when flowers were leaving the store it was a problem to know whether the order was paid or charged or a clerk's gratis order. Having the duplicate order sheet system with the cash register imprint on both sheets, one has but to look at the order sheet attached to the box to know its contents and see whether it has been paid, charged or C. O. D. This method has helped materially in our system of checking up sales.

"Then, too, the shipper has his duplicate delivery slips for the chauffeur and himself, recording the time the package leaves the store and which truck was given the delivery. This method is undoubtedly adopted by all florists at the present time but the order sheet accompanying the order to the shipper's bench after it has been recorded by the cash register is worth while putting into practice."

## PAUL P. DAILLEDOUZE

Paul Pierre Dailledouze, a member of the Dailledouze family that has been famous in floriculture for generations, is dead at his home at Troy avenue and Lenox road, Brooklyn. Mr. Dailledouze was born in Brooklyn in 1861, the son of the late Henry Dailledouze, a famous floriculturist, and was the twin brother of Henry Dailledouze, Jr. The brothers made a specialty of the carnation and were constantly experimenting with this plant. In their extensive Flatbush greenhouses they had hundreds of varieties of this flower. Their greatest triumph, with which they won many prizes, was "Enchantress Supreme."

# REVIEW OF DAHLIA SEASON

## Thomas Leavitt Discusses the Shows and Many Other Interesting Matters

At the end of the dahlia season Mr. Thomas Leavitt, president of the Dahlia Society of New England, says that comparatively few really good seedlings have been introduced, but that the older kinds have been grown in greatly increasing numbers, and that so far as he can see there is no falling off in the interest which the dahlia has aroused among all classes of flower growers.

"The decorative dahlia remains a favorite," continued Mr. Leavitt, in a recent interview. "I believe that more decorative dahlias are grown than the sum total of all the other classes. In this class I saw five new seedlings of much merit at the New York Show. Several good new Hybrid cactus have been introduced, and this class finds considerable favor, but does not seem at all likely to overtake the decorative classes.

"I was greatly interested this season in the great contrast between the New York and Boston shows. The New York show was really a commercial flower grower's exhibition. Of course many private growers showed their flowers, but the commercial growers vied with each other to make elaborate displays. From my observation, too, the competition was far keener in the commercial than in the amateur classes.

"The flowers which I saw in the commercial booths were far ahead of those to be seen anywhere else in the hall. As a matter of fact, the big commercial men have been remarkably successful in staging their flowers in New York. It is real art to put up exhibits like theirs. I understand that John Scheepers spent $2,000 on his booth. In any event, he made a wonderful showing. Handsome oriental vases were used for the flowers and filled with blooms having stalks five or six feet long. The flowers were amazingly well grown, and being against an enormous velvet background, made a wonderful picture which was enhanced at night by the rays from two spot lights located in an opposite balcony.

"The Burpee people, who won first prize, fairly outdid themselves in the arrangement of their dahlias. They used special stands of different heights which gave the effect of flowers growing on the plants in a garden. It was a liberal education to study the way in which the Burpee flowers were set up.

"After all, the best exhibit of flowers which I saw during the season so far as quality is concerned, was at the Brockton (Mass.) Fair. The dahlias shown at this fair were remarkably fine and the whole exhibit, while small compared with the big shows, was very creditably conducted, due to the energetic efforts of Dr. S. Irving Moody of Brockton.

"Of course many dahlias seen in the shows are forced, but I am convinced that field grown, unforced flowers stand up for a much longer time and make a better show, all in all. Personally I used only field grown blooms, and my exhibit at New York stood through the entire show without being renewed. I think there are few exhibitors who can say the same.

"It is necessary to warn some amateurs against the use of nitrate of soda, which damages the roots of the dahlias and results in poor growth the second year. The best fertilizer I have found is manure two years old. I use great quantities of such manure, produced on my own farm, and it is most effective. I do not, however, put it on at planting time, and am careful to keep it away from the roots. My plan is to apply it as a mulch during the growing season. I have found that both potash and wood ashes applied while the plants are growing are excellent to give them substance. Soot is sometimes used to strengthen the color, and it is a fact that soot will make white flowers whiter, just as it will make red flowers redder."

Speaking of the Dahlia Society of New England Mr. Leavitt said that it had been making good progress the past year. It now has a hundred members but a campaign is to be immediately launched to increase the number to 250. Several changes have been made among the officers, the list of which is now as follows: President, Thomas Leavitt, Dorchester, Mass.; Vice-president, J. K. Alexander, East Bridgewater, Mass.; Secretary, T. H. Hughes, 78 Brownell St., New Bedford, Mass.; Treasurer, Edgar W. Darling, New Bedford; Executive Committee, the above named officers and William Symonds, Marblehead; J. J. Marshall, Lynn; J. E. Jones, Waltham, and George Fish, Billerica.

### HAS ALWAYS LOVED DAHLIAS

#### Some of the Interesting Events in the Career of Richard Vincent, Jr.

Richard Vincent, Jr., of Whitemarsh, Md., who was recently elected president of the American Dahlia Society, has had a very interesting career, and it has been bound up largely with the dahlia.

When he was 6 years old he offered his father his whole fortune, 6 pence, if he would let him call his own one of a dozen dahlias that the father had just bought, the first the boy had seen. Mr. Vincent will be 80 in December.

R. Vincent, Jr.

"Those 12 dahlias were the first I ever saw," said Mr. Vincent, "and they were red and yellow and white, the only colors then. That was in Rugby, England. The dahlias were round balls and for thirty or forty years that was what they remained. All the florists tried for a perfect sphere and if they failed they would throw the flower out. It was only a few years ago that good taste began to develop and now we have these

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

many varieties and colors and shades.

"When we came here from England I was 11 years old. I went as an apprentice to a florist, and from that time on paid my board and bought my clothes. When I was 21 I had $1,000 saved, but when I was 25 and married I hadn't a cent. I had lost all I had and a little property of my wife's. But the fighting blood of my ancestors helped me through.

"It was in Astoria, L. I., that I served my apprenticeship and then after I had lost everything I took the place I have now. There was a man on it who couldn't do anything with it and he thought if he let me have it on time he could at least get his taxes. There was a little old log cabin on it. When we reached it my wife said:

" 'Richard, you are here, and it is all right; but if you weren't I couldn't stand it. It's the most God-forsaken place I have ever seen.'

"There were 100 acres then, and now there are 400. The little log cabin is gone, and there is a house. We have two acres of lawn, there are four or five acres of greenhouses, seventy acres of dahlias, twenty-five of canna, besides other decorative plants, but those are nothing to the geraniums we raise. We ship them small, but we think it is nothing if we don't get 2,000,000 geraniums a year."

## George Watson's Corner

"You in your small corner and me in mine."

Tom Butterworth, our old Framingham hero, paid us a pleasant visit on his way to Baltimore. He was accompanied by his wife and daughter. These Boston boys keep their hold in fine shape. Tom looks well, and shows up fine, against that other Boston hero, Antoine Louthy. The two of them, in their different fields, are both a credit to Boston, and help to keep her on a par with Philadelphia as the horticultural center of the world. Chicago and other woolly centers please hold horses. We may be willing to concede a few paces in the final race.

October 10th was a great day in Baltimore for yours truly. He met Perry and McKissick and millions of his old friends from all parts of the country. The Baltimore boys certainly gave the F. T. D. a most cordial welcome, and they returned the compliment in most cordial fashion leaving lots of business behind them.

We often think of our old trips up to Rangeley Lakes with Bill Stewart and Pat Welch and Old Portland and the nickel cigar man at Broad and Chestnut St. and a bunch of others. That was in the nineties and twenty or thirty years have carried most of them to the great beyond. We certainly had great times, and fine fishing in the lakes. And we never shot at each other thinking it was a deer, as happened recently to Dr. Maynard of my home bailliewick, Lansdowne. My old friend, Tom Martindale, used to brag about the joys of deer hunting and I never heard that he shot any of his friends for a deer. Just the same, fishing for mine. If I go up Rangeley way or into Canada it will be fishing and not deer hunting.

I have a suspicion that there were a whole lot of the boys besides Robert Lockerbie of Greenville, South Carolina, behind that nice package of 1922 silver Samuels received October sixth. But as I can't spot the others Robert gets all the credit. When I got the box and looked at the sender's address I said to John Dodds, "Ha, a little Moonshine from South Carolina." Then I weighed it and shook it. "No b'gosh, it's not Moonshine. Must be rivets by the weight of it." Then Dodds just like a woman says "Why don't you open it." So I opened it. Sixty-one. My sixty-first anniversary.

Ah, ha, so I had to take John down to the hotel and buy him some grape juice.

Do not forget that Armistice Day comes November 11th. Be well prepared with red poppies which symbolize our National sentiments for the boys who gave their lives to save the world. "In Flanders Fields where poppies grow," sang the poet, and he touched the true chord. Of course Hallowe'en Day comes before that; but no reminder is necessary about such old folk-lore days. We are all familiar with their dates from childhood, and have them down better than our own birthdays. The blue cornflower and the white asters also work in very nicely with the red poppies for Armistice Day.

We have all a touch of sentiment hidden somewhere inside of us. Some have it so strong that it bubbles and blossoms to all they come in contact with. Some have it so weak that it takes a cataclysm to wake them up. For instance, you take that Sellers' armchair dated 1682. It lay out on the Pennock lawn corner for years until sentimental Samuel came along and had it repaired and polished. Now, when the Sellers have their annual family meeting, they are all clamoring for a loan of it for a year. It was worth about twenty-nine cents until sentiment came along. Today, it is worth about a million. It's the same with horses and flowers and most everything until you put a little sentiment into the subject. A flower is but a wayside weed until you glorify it.

Well, folks, that little unionist questionaire of Sept. 25 has at least brought one good roar. It is dated Dedham, Mass., Oct. 15, and among other things say:—

"You certainly write some bunk! I don't believe you ever attended a

The John C. Meyer Thread Co. were the first to introduce the Meyer green Florists' threads that would not fade or change color for Florists' use. Ask any of the wholesale Florists or growers about the Meyer green Florists' thread and they will tell you it is the best. It will go twice as far as ordinary thread and the Florist can do better work with it. Write for prices and samples and we will see that you get the best thread in the world.

trades union in your life; you have evidently swallowed the outpourings of some past master of the Manufacturers Associations; or else the voluble propaganda of the subsidized press. Maybe you write just to please Chambers of Commerce, bankers, and manufacturers. If so, all right. But no trades unionist would ever take any stock in such stuff!" That's the roar! It pleased me a whole lot, and I had a good laugh. But a roar isn't an answer. So the question remains just where it started. Come again. And please state what's wrong with the argument.

Hallowe'en it is, and Philip Freud of Michell's, as usual, is right there with the goods. Three or four wonderful window displays. He also promises to be on the job for Armistice Day, November 11th. That boy is a genius and sure knows how to combine sentiment with business.

# Principles and Practice of Pruning

By M. G. KAINS

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The accumulation of new knowledge has become very considerable, especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book as this, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth. This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself, a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery. There are 400 pages in all.

**Price $2.50**

HORTICULTURE PUBLISHING CO.

# Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, $2.25.

WILSON'S

# O. K. Plant Spray

Kills Plant Insects, Scale and Mildew

*Used by Leading Gardeners*

**Bbls. $90; ½ bbls. $50; 10 Gals. $20; 5 Gals. $10**

Brooklake Park,
Madison, N. J.,
July 14, 1922.

Andrew Wilson, Inc.,
Springfield, N. J.
Gentlemen:

Your O. K. Plant Spray as its name implies is super-excellent. It is more than you claim for it. Outdoors we have cleaned our conifers of red spider. Rose garden is free and no dreaded rose beetle to dismay our efforts. Indoors I was at first skeptical with its application upon orchids. Previously I never sprayed them without loss of fleshy roots, no matter how light the application, but your spray has cleared all doubt as to its safety on rare orchids.

Carnations and Mums are kept free of pests and fungus disease. Its two-fold use is wonderful. Roses, our situation favors black spot, and every fungus disease a rose is heir to, but we spray the soil of the benches every week with 25% solution and are free.

It is in short an allied army of protection and care of all plants in horticulture's realm. I heartily recommend it.

Yours very truly,
W. R. FOWKES,
Supt. of Howard Cole Estate.

*Andrew Wilson*

## BOSTON

Sidney Hoffman has recently stocked up with a great number of baskets which are among the most substantially made and artistically designed of any baskets which have been seen in Boston for a long time. Some of them will be used for fruit and others for flowers. They all came from the H. Bayersdorfer establishment in Philadelphia, and most of them were imported. They have aroused much interest in the members of the trade who have seen them. Mr. Hoffman is enthusiastic over the quality of these baskets, believing as he does that only the best material should be used for making up any kind of order which goes out of his store.

William H Elliott, as usual, is growing about 5,000 pots of chrysanthemums this year, his long house being given over entirely to these plants, which are in fine condition and selling well. Mr. Elliott says that the old standbys, like Golden Feather, Firelight, Pink Dotty, Pink Caprice and Gaza have not been improved upon as market flowers. The Elliott establishment at Madbury, N. H., has seen several improvements this season, new steam boilers having been installed, new coal and ash pockets put in and a new chimney erected.

Fitzgerald, the florist, has a very unusual window display at his attractive store on Huntington Ave. It consists of a miniature reproduction of the Harvard Stadium, the entire front of which is banked with carnations in different colors. The Harvard football team and a rival team are seen at play, and the window attracts much attention because of its unique character and the care with which the correct proportions of the Stadium and other features have been retained. This display is the work of Ralph McKenna, one of Mr. Fitzgerald's assistants, who is an athlete himself and comes from an athletic family, his brother being captain of the Detroit University team this year.

Welch's, Inc., the well known wholesale florists of Boston, now located at 95 Summer St., has been advertising extensively in the Boston papers, offering flowers at retail. He is specializing in a box of assorted flowers at $3.50.

## "The Laws of Hybridizing"

DISCOVERED BY RICHARD DIENER

A discovery of tremendous importance to everyone interested in plant-breeding and plant life. Any form and size of flowers, fruits and grains can be obtained by application of these laws in the quickest possible way. They are the first workable laws ever discovered in plant and animal-breeding. Included is an explanation of What Plant Life Is, Animal Life in Relation to Plant Life; What Plant Sports Are, and other valuable information. A pamphlet of sixteen pages, elegantly printed and illustrated.

PRICE, $5.00

## THE TALK OF THE TRADE

The William H. Elliott Sons Co., with its mammoth rose houses at Madbury, N. H., have a constant demand for manure in large quantities. The manure question has been solved at this establishment in a unique way, and one which holds possibilities for other florists. There is a large farm in connection with the plant which has been turned over to a dairyman. This man keeps 130 cows. The Elliotts pay the farmer a bonus of $20 a year for each cow, and have all of the manure that they require. This arrangement gives them a constant supply without any worry. A somewhat similar arrangement is now being made at the Brighton, Mass., greenhouses. The barn on the place is being fitted up to accommodate 16 cows, which will be handled by a neighboring farmer, the manure being available for the greenhouses.

Florists, like market gardeners, have found an increasing difficulty for several years in getting all the natural fertilizer they need. In some cases florists have tried to break into the dairy business, but have found it exceedingly difficult to run both lines. A man may prove a genuine success growing flowers but a miserable failure producing milk. By the Elliott plan manure in plenty is obtained without taking on any of the worry.

---

Mrs. William Edwin Clark, of Sharon, Mass., has hit upon a new sales plan, and one which is rather unique. Mrs. Clark has an unusual garden, laid out with great skill by a landscape architect, and containing perennials of the choicest kinds in great variety. She is advertising a plan of the garden, together with a photograph showing it at the blooming season, and roots of all the perennials which it contains, including many of the finest irises, at the price of $150. The whole collection includes about 540 plants and bulbs, and each plant root is numbered to correspond with a number on the garden plan. This makes it possible to set out the plants just as they stand in Mrs. Clark's garden, and as they were assigned by the landscape expert. Of course the plants which are sold actually come from a nursery which has been established in close proximity to the garden proper. Mrs. Clark specializes in irises of all kinds, and also in gladioli, having a very choice collection.

---

It doesn't matter much to Sidney Hoffman, the Boston florist, whether ferns are badly eaten by bugs, as this year's crop seems to be, or not. There hasn't been a fern in his store for many years, as he never uses them for making up designs or for decorations. Mr. Hoffman, who is known far and wide as a floral artist of exceptional skill, relies on hemlock as the basis of his pieces. He uses a vast amount of this hemlock, most of which comes from New Hampshire, and is of excellent quality. Sometimes he sends for it and sometimes it is delivered direct to him. He also uses considerable laurel, but has proven that hemlock is one of the most valuable materials which a florist can use if he knows how to handle it with a deft touch.

---

Mr. Hoffman is enthusiastic over the treatment given the members of the F. T. D. who stopped in Philadelphia after the Baltimore convention. He cannot say enough about the extraordinary reception given the delegates by the Philadelphia boys, although the whole matter was arranged very quickly and without any idea of how many would be present. According to Mr. Hoffman, between twenty-five and fifty delegates had been expected to stop at Philadelphia. As a matter of fact, one hundred and twenty-five got off the train there.

The Philadelphia committee was not at all disconcerted, and the entire crowd was taken care of without the least difficulty, being given a splendid spread in one of the local hotels at noon. Then there were machines to take them anywhere they wanted to

Bins for Storing Dahlias on the J. K. Alexander Establishment

go, and when evening came supper was provided with hardly more than an hour's notice, and was enjoyed by eighty ladies and gentlemen. After that a theatre party was arranged, and the Philadelphia florists stayed right by until the train pulled out which carried the delegates away.

"Never," said Mr. Hoffman, "have I seen all branches of the trade work together so well as in Philadelphia. And never a more hearty display of good fellowship and genuine courtesy. No attempt was made to sell goods. In fact, business was not thought of. It was simply an opportunity to give the visiting florists a good time which the Philadelphia boys determined should not be overlooked.

"Charles H. Grakelow, Henry Fox and J. J. Habermehl were the men in charge of the entertainment. Each one is a prince, and all of them have the art of entertaining down fine. If a lot of florists ever come to Boston I hope that the members of the trade in this city will be able to do as good a job. Certainly they can learn some lessons from the Philadelphia florists. It is an occasion which will long remain in my memory."

Most of the stores handling bulbs have reported a very good retail business. There is no falling off in the demand for garden bulbs, and for bulbs to force. Some of the dealers have all they can possibly dispose of; others are already well sold out. Some fears have been expressed that the higher prices would cut down the sales, but this has not been the case. There is a question, however, how far the public will go when the time comes for paying more money for what must be considered as pure luxuries. The present outlook is that prices next year will be considerably higher than they have been this season. The new tariff is getting the blame. Whether the tariff is really responsible or not, the Dutch growers seem determined to use it as an excuse for increased charges.

According to A. J. School, of San Francisco, Cal., bulb growers have had a good season, the stocks of Freesia Purity, early flowering gladioli, ranunculuses and anemones being about exhausted. I understand that the demand for Holland bulbs is very good on the Pacific coast, Mr. School alone having imported 750,000 bulbs. The Holland stuff has all reached California in good shape.

John Lewis Child, Inc., of Flowerfield, N. Y., is offering Triteleia uniflora as a special premium to retail buyers. If I am not mistaken this is a rare plant in America at the present time. The chances are that the Child Co. has most of the stock. In any event, the bulbs cannot now be imported, as they are among those which for some reason which nobody can explain have been banned by the Federal Horticultural Board. Triteleia is a lily-like plant, with fragrant lavender-blue flowers, borne on tall stems. It makes a good plant to grow in the house.

I was much interested to hear Mr. Charles H. Totty say in his lecture in Boston the other day that the small flowered chrysanthemums were rapidly growing in popularity. He said that whereas in former years his firm used to sell hundreds of large mums to one of the smaller type, the situation was now being reversed. Many people find the singles and the early flowering kinds more artistic than the big sorts. He also said that the single variety Ida Skiff was being grown by the millions under glass around New York City, it being particularly easy to handle, keeping well and having won much popularity with the public.

## GARDENERS' AND FLORISTS' CLUB OF BOSTON

The Gardeners' and Florists' Club of Boston has planned a field day to be held Saturday, Nov. 18, at Halifax Gardens, where Eber Holmes, the well known rose grower, is in charge. Luncheon will be served at 2 P. M. Many of the members will go over the road, of course, but a train leaving the South Station at 12.39 will be convenient.

At the next meeting of the Club, the evening of November 21, Orchid Night will be observed. There will be talks by George Butterworth, Donald McKenzie, and George Ianson, all of whom are well known experts. A different group of orchids has been assigned to each speaker.

The many friends of Luke Doogue, long connected with the Boston Park Department, will be glad to learn that he is out again after a long illness.

Frank W. Rane, formerly State Forester and now connected with the trade at West Palm Beach, Fla., has been making the rounds of Boston florists and renewing old friendships.

## FLORISTS' ALLIANCE

### Dinner for the Trade To Be Held in the Near Future

The New England Florists' Alliance is planning for a dinner to be held in some hotel in Boston in the near future, date to be set soon. This dinner is to be for all branches of the trade, and a large attendance is hoped for. On that occasion the florists of Boston and the surrounding towns will have an opportunity to learn just what has been done by the Alliance

Pres. Charles F. Boyle

since it organized, and what the outlook is.

At a recent directors' meeting of the Alliance it was decided that the directors themselves should make a personal canvass for new members.

"Although the membership has been constantly increasing, there are still a large number of florists who do not appear to have sensed the value of the Alliance to them," said Mr. Charles Boyle, of Thomas F. Galvin, Inc., president of the organization, in an interview. "The fact is that the success of the New England Florists' Alliance will be of the greatest benefit to retailers and growers alike.

"The Alliance is now on a sound basis, and the preliminary work has been completed. A centrally located office with an efficient secretary has been established. It is only a question now of extending the membership to all parts of eastern New England. Already we have many of the most prominent and successful florists as members.

"We realize that the work of changing over the markets has interfered somewhat with the work of the Alli-

ance, but now that a market site has been settled upon we feel that it is time for the Alliance to go ahead more rapidly than has been possible up to the present time.

Asked about advertising Mr. Boyle said: "We have been making plans for advertising, but up to the present time this fall flowers have been selling at so good a price and without any apparent over-production that we have not felt it necessary or wise to do any advertising work. We shall be ready, however, when the right time comes to put on an advertising campaign. After all, that is the way an organization of this kind should work. It should watch its opportunities and put on a campaign that will stimulate buying at a time when the ordinary market is stagnant, and when flowers are hard to sell."

### MASSACHUSETTS HORTICULTURAL SOCIETY OFFICERS

The annual election of officers will be held by the Massachusetts Horticultural Society at Horticultural Hall, Saturday, November 18. The nominating committee, consisting of Prof. C. S. Sargent, John S. Ames, Thomas Roland and Mrs. Bayard Thayer, has submitted the following list:

President, A. C. Burrage.

Vice-president, Thomas Allen.

Trustees for Three Years, Mrs. B. R. Crosby, Arthur Lyman, Edwin S. Webster, and Fred A. Wilson of Nahant.

Trustees for Two Years, Robert Cameron of Ipswich, and Ernest H. Wilson.

Trustee for One Year, Mrs. Homer Gage of Shrewsbury.

### CAPLAN'S NEW GREENHOUSE

Caplan, the Florist, has completed the first section of a new greenhouse at the rear of his new store on Massachusetts Ave. This section is of Hitchings construction, and is fifty feet long. It is now being filled with flowering plants in pots, and adds not a little to the attractiveness of the establishment. Another section, where birds and gold fish are to be kept, is to be added in the spring. Mr. Caplan's new flower shop is one of the prettiest in Boston and one of the most conveniently arranged.

Thomas Pegler, an old time Boston florist, but now in charge of the Saunders establishment at Biddeford, Me., has been visiting in town. He was especially interested in the new market, as he was formerly a market director.

# CONTRACTS AWARDED

## Work on the New Flower Market in Boston to Be Begun at Once

The work of making over the Cyclorama Building on Tremont Street, Boston, so as to make it available as a flower market will start immediately. All the contracts have been let and the architect's plans have been completed. The architect chosen is Henry Bailey Alden, of Boston, and the general contract has been let to L. P. Sowle & Sons Co. The contract for heating the building has been awarded to John Chatman.

Because of the fact that the work must be completed by the first of January, the plans accepted are not very elaborate. Yet they will entirely change the outside appearance of the building, as well as increasing the floor space. Although the main floor is almost round at present, the building itself is square and by taking out the corners a square room will be produced. There will be arches at each of these corners. The partitions between the rotunda and the brick building in front will also be taken down, so that all the space inside the four walls can be used for market purposes. It is estimated that this will give about 22,000 square feet.

The entrance to the building is now at one side. By a new arrangement the main entrance will be in the front of the building, and will be quite imposing. There will be another entrance which leads to the basement at one end, and a second entrance to balance it in appearance at the opposite end, leading to the boiler room. A short flight of stairs will lead from the street to the market place.

Just what arrangement of stalls will be made has not yet been settled. But at each side of the room there will be a huge community ice chest. There will be toilet facilities, also offices and other conveniences. The matter of a restaurant has not yet been decided.

In order to increase the light in the market a series of windows is to be set into the roof around the dome, and the center of the dome itself is to be glassed over with a heavy filled glass, which will admit light but not heat.

Huge boilers will be used to heat the building, and it is planned to maintain a temperature of 70 degrees. The system to be installed will provide for 10,000 square feet of extra radiation to be available when the market is enlarged.

It is expected that a refrigeration system of some kind will be installed.

As the plan stands now there will be no other stores or offices on the ground floor, but the Henry Robinson Co. will occupy the entire basement, having about 10,000 square feet. This will give them double the amount of room they have at present and allow for an expansion of their already large business. The basement has windows opening on the street, and is really only a few feet below the street level.

The space at the rear of the building will not be occupied at present, but plans have already been drawn for a 3-story building to be erected there at some future time, and to provide for offices and other rentals. In the meantime the other wholesalers wishing to be in the vicinity of the market will have to find stores nearby.

### ADVOCATES NATIONAL ROSE GARDEN

At a recent address in Worcester, Mass., Pres. Robert Pyle, of the American Rose Society, advocated the creation of a national show garden of roses in Washington, to be situated between the Washington monument and the Potomac River. He said that the society believes such a garden would do much to stimulate interest in roses.

David Watson, superintendent of the Dr. Lancashire estate at Essex, was one of the out-of-town visitors at the Boston Chrysanthemum Show.

Prof. Clark E. Thayer, connected with the Department of Floriculture at the Massachusetts Agricultural College, was a Boston visitor recently.

# Eldora --- Eldora

*This New, White and Pink Variegated*

# Carnation

has proven so eminently satisfactory in every way that I shall distribute it to the trade this season, instead of next, as I had contemplated at first. I consider **ELDORA** a decided improvement over any variegated Carnation. A truly commercial variety. If I did not consider it such, I should not undertake to send it out. It is of good commercial size, very prolific, making no useless grass, with fine, strong stem, and it will not split.

**ELDORA** ships well and is a grand keeper

## GARDEN CLUB OF AMERICA

### Many Gardens and Estates at Washington Visited

The spirit of gardens was in Washington during the meeting of the Garden Club of America, held there October 23-25. The spirit of hospitality was also there, and it warmed our hearts to have all the beauty of the fine old houses and charming gardens open to us.

The first event was the general meeting itself in the Red Cross Hall, where Dr. David Fairchild, in his address of welcome, told us that we might go to other cities and find more beautiful gardens but that in Washington we would find men interested and enthusiastic about the work the women of the Garden Club of America are doing.

His address was followed by one in which Dr. Charles L. Marlatt told us of the benefits derived from the much discussed Quarantine 37.

Our visit to Gunston Hall the following day was one long to be remembered. From the beautiful old house built by George Mason between 1755-1758, we walked through alleys of box ten and twelve feet high to the terraced garden where hot coffee and doughnuts and big red apples were served us by the old-time Negro servants.

On our return drive we stopped at the lovely Pohick church, where Mr. Mason, the builder of Gunston Hall, and George Washington had pews. Then we went to Mount Vernon where we placed a wreath on Washington's grave and planted a white ash tree. That evening there was a meeting in the National Museum at which Mr. Charles Moore and Mr. James L. Greenleaf spoke on the "Improvement of Washington." In the Smithsonian Institute Mrs. Charles D. Walcott's beautiful pictures of wild flowers were shown.

The next morning we paid a most interesting visit to the tents of the Agricultural Department and learned more of the quarantine.

In the afternoon we drove through beautiful Rock Creek Park to Mr. James Parmelee's garden. That evening a pretty Wild Flower Fantasy was given, and Dr. Coville and Dr. Wherry addressed us. Mrs. Helen E. Fowler also told us of the lily gardens which her father, Mr. Walter Shaw, had started.

The next day we were entertained in Baltimore, seeing beautiful houses and fine old box-bordered gardens there. No one who visited Hampton will forget the beauty of that house.

M. R. CASE,

Hillcrest Gardens,
Weston, Mass.

CHOICEST STRAIN

## JAPANESE IRIS

(Iris kaempferi)

Thousands of fine transplanted specimens from selected seed imported from Japan. The colors are mixed and in hundred lots you will get all the gorgeous colors equal to the finest named varieties.

## CHICAGO FLORIST CLUB

The last meeting of the Chicago Florist Club was held at Maywood, where the members were guests of the Associated Maywood Growers. The various modern plants in the vicinity were inspected and a well arranged flower show looked over. There were flowers from as far away as Cromwell, Ct., an exhibit of the Rose Commonwealth being sent on by A. N. Pierson Co. A dinner was served in the packing rooms of the A. F. Amling Co. and speeches were made by E. G. Hill, J. C. Vaughan, H. N. Brunf, John Michelson, August Poehlmann and Peter Pearson. At a business meeting which followed nominations of officers were made.

For President—F. Lautenachlage nominated J. C. Michelson. T. E. Waters nominated A. T. Pyfer.

For Vice-President—T. E. Waters nominated August Lange.

For Secretary—Walter Amling nominated F. Lautenschlage.

For Treasurer—Walter Amling nominated A. H. Schneider. Hans Jepson nominated Rudolph Ellsworth.

For Trustee for three years—Mr. Benson nominated Wm. Collatz. T. E. Waters nominated Joseph Kohout.

## TENNESSEE STATE FLORISTS

The Annual Convention of the Tennessee State Florist Association will be held at Nashville, November 13 and 14, at the Hermitage. An excellent program has been arranged. This Association now has 251 members. The present president is Harold Joy of Nashville, while G. M. Bentley of Knoxville is secretary and treasurer.

## BOSTON FLOWER SHOW

### An Excellent Exhibit of Chrysanthemums, Begonias and Orchids

Although the Fall Flower Show of the Massachusetts Horticultural Society last Saturday and Sunday was not noteworthy as to size and attendance, some excellent plants were shown. The principal group was set up by Loren D. Towle of Newton, and was very well staged. Another fine group along the side of the hall was made by Edwin S. Webster of Chestnut Hill. Both Mr. Towle and E. B. Dane made a good display of orchids. The Dane collection was in the lecture hall, which was otherwise given over to fruit, and contained several especially interesting rare plants. A particularly fine specimen of the rare Brassa-Cattleya Admiral Jellicoe excited much interest. The Cypripedium Hannibal, which is new, was noteworthy, and a better specimen of Laela-Cattleya Alex has never been seen in the hall. Donald McKenzie, superintendent for Mr. Dane, has seldom had orchids in better condition than those seen at this show.

James Marlborough, superintendent of the Thomas Proctor estate at Topsfield, again showed some of the marvelous English begonias for which he has become famous. Among them was Orange King, shown for the first time. This plant has flowers of very large size, and possessing a most delightful color. Emily Clibran, a salmon pink, was perhaps the largest specimen of these begonias ever seen in the hall.

From the estate of Mrs. W. W. Moore, at Pride's Crossing, came seedlings of the Chrysanthemum Mrs. Filkins, ten of them, grown by the superintendent, A. E. T. Rogers. Perhaps the handsomest in the lot has been named Rockmarge.

A particularly interesting exhibit was made by the Harvard Botanical Gardens, James Reardon, superintendent, consisting of Lantanas, Salvia involucrata and Begonia peltala, plants seldom seen.

Besides the flowers there was a large collection of fruit which attracted much interest. The display put up by Hillcrest Gardens, autumn leaves being used for the background, was especially attractive, and received the president's special prize of $50.

The awards for flowers were as follows:

**John Allen French Fund**

**Plants and Flowers**

Group of Flowering Plants; 1st, Edwin S. Webster.

Winter Flowering Begonias, 6 plants; 1st, Mrs. R. M. Saltonstall.

Display of Orchids; 1st, Ernest B. Dane.

Best Specimen Orchids; 1st, Ernest B. Dane.

Vase of Carnations, 50 blooms; 1st, Loren D. Towle.

Vase of Pink Roses, 25 blooms; 1st, Loren D. Towle; 2nd, Mrs. E. A. Clark.

Vase of White Roses, 25 blooms; 1st, Loren D. Towle.

**Henry A. Gane Memorial Fund**

Group of Chrysanthemum Plants; 1st, Loren D. Towle.

Trained Chrysanthemum Plant, White; 1st, Loren D. Towle; 2nd, Mrs. R. M. Saltonstall.

25 Blooms, Chrysanthemums; 1st, Loren D. Towle.

12 Blooms, Japanese Chrysanthemums; 1st, Iristhorpe; 2nd, Loren D. Towle.

12 Vases, Pompon Chrysanthemums; 1st, Iristhorpe.

10 Blooms, Long-stemmed Chrysanthemums, White; 1st, Loren D. Towle; 2nd, Mrs. L. W. Case.

10 Blooms, Long-stemmed Chrysanthemums, Yellow; 1st, Loren D. Towle; 2nd, Iristhorpe.

10 Blooms, Long-stemmed Chrysanthemums, Pink; 1st, Iristhorpe.

Silver Medal to Ernest B. Dane for Brasso-Cattleya Admiral Jellicoe.

**First Class Certificate of Merit:**

To Ernest B. Dane for Laelia Cattleya "Alex."

To Ernest B. Dane for Cypripedium Insignie Sanderae.

To A. T. Rogers for Chrysanthemum "Mrs. W. H. Moore."

To Cromwell Gardens for Collection of Pompon Chrysanthemums.

To Cromwell Gardens for Rose "Commonwealth."

To A. E. T. Rogers for Collection of Seedling Chrysanthemums from "Mrs. Filkins."

**Gratuities:**

To Henry Stewart for Specimen Oncidium Varicosum.

To Iristhorpe for Display of Chrysanthemum Blooms.

To Thomas E. Proctor for 3 Specimen Begonias.

To Harvard Botanic Garden for Display of Flowering Plants.

To Loren D. Towle for Display of Orchids and otier decorative plants.

To A. W. Preston for Specimen Plant of Polypodium Mandalanum.

To Artnur Lyman for Collection of Pompon Chrysanthemums.

King
GREENHOUSES

The consistent growth of the King Construction Company since its organization twenty years ago is a testimonial to the unvarying quality of King Greenhouses. Built with an eye to permanence, of the best quality of workmanship and material the reward has been the confidence of the growers who want the best in greenhouse construction and service.

The superior quality and low cost of King Greenhouses will interest you. Write for the bulletins on semi-iron, pipe iron frame and steel frame flat rafter houses. We'll send them without cost or obligation immediately upon receiving your letter.

JOHN LEWIS CHILDS, Inc.
FLOWERFIELD, N. Y.

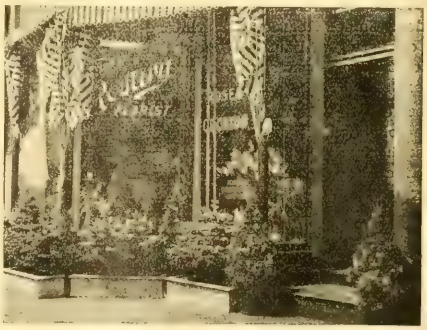
# EVERGREENS FOR FLORISTS

—Courtesy Little Tree Farms
**Selling Tub Spruces to Private Homes Is An Almost Undeveloped Field**

There is or ought to be a close bond between the florists and the nurserymen. They have much in common. Indeed there is every reason why they should work together to a much greater extent than has been the case in the past.

As a result of the scarcity of box wood and bay trees due to quarantine 37, and the very high price of palms, florists are beginning to realize that evergreens in small and large sizes make a very satisfactory substitute. Accordingly evergreens in tubs and boxes are appearing in the florist stores in constantly increasing numbers. Mr. Theodore F. Borst, who is at the head of Little Tree Farms, of Framingham Center, Mass., which makes a specialty of growing evergreens for florists' use, says that the demand has been growing particularly fast since the quarantine. He is shipping a large number of these trees this fall. He makes a point of growing trees particularly heavy rooted and which are more than ordinarily symmetrical and well shaped. It isn't possible to take plants of this character just as they run in the nursery. They must be grown with a definite purpose in view.

According to Mr. Borst, many of the florists do not appreciate as yet the full possibilities of evergreens, even though they are using them much more freely than in the past. He points out that they have a double value. In the first place they are very useful indeed for decorating the store. If palms and similar material is not at hand, a few well shaped arbor vitaes or junipers can be used to take their places with perfect satisfaction.



If sidewalk room is available, white spruces and other evergreens in tubs can be used to give a marked holiday spirit to the store. There are several instances in Boston where the truth of this statement is well drawn out. There's a fine group of spruces running the entire length of the Rosary on Boylston Street, while tubbed evergreens are used in profusion around the entrance to the very handsome and modern flower shop maintained by Mr. O'Brien on Beacon street.

Decorations of this character really need not cost the florist anything because all of them can be sold. The method which several up-to-date florists pursue is to constantly replenish their stock, making a point of selling all they have on hand every few weeks. This keeps a new supply constantly coming along, and of course there is a profit on every sale.

It may be worth while to make one observation at this point. Florists often place a higher value on plants of this kind than seems to be

Courtesy Little Tree Farms
**A Novelty Shop Window Banked With Evergreens**

—Courtesy Little Tree Farms
**Evergreens in Boxes in Front of Florist Shop**

justified. Perhaps that is because they are less familiar with them than with flowers, palms and ferns. The way to keep them moving rapidly is to sell them at prices which will appeal to the public. As a matter of fact, the people who frequent flower stores often fail to realize that these tubbed evergreens can be used to advantage in the home. It would be wise for the florist to place more emphasis upon them in his advertising, and in his selling. It is a decided help in many cases to put the name and price label in each tub or window box. That in itself arouses interest and opens an opportunity for salesmen to talk evergreens. In some florist stores it is important that the clerks be instructed as to the value of nursery stock of this character. Not having been familiar with it in the past, they cannot talk about it intelligently unless they are coached. It should be explained to them as well as to customers that all such evergreens as junipers, spruces, arbor vitaes and cedars can be used to advantage indoors as well as out, and that they are particularly handsome when used on porches, at entrances and in window boxes.

It is possible with but little effort to build up a big sale of window box material in the fall. Most people are glad to have the fact called to their attention that the boxes which have been beautiful with flowers and foliage plants throughout the summer can be kept just as handsome during the winter months.

Another line which can well be studied is the value of such evergreens for holiday decorations, and especially for Christmas gifts. It is a new thought to many people that they can make a present to a friend of potted junipers in pairs, perhaps, or a window box complete with its trim little plants, or an ornamental container with a fragrant spruce, for the living room or hall. Suggestions of this nature are likely to be received with appreciation.

Still another line worth developing is the decoration of store windows, other than those of florists. There are many concerns, especially in sections where high grade shops are found, which can be persuaded that boxes of evergreens around their windows, or a series of potted plants, will enhance the attractiveness of their store front and add to their list of customers.

It isn't necessary to stop even here in discussing the various ways in which stock obtained from the nurseryman can be used by the florist. But enough has been said to show that this is a branch of the business which is worthy of more attention than it has received from the average florist in the past.

---

The Society for the Preservation of the Native New England Plants has sent an appeal to the pastors of all the churches not to use laurel for Christmas decorations, but to substitute white pine. The society claims that laurel is in danger of rapid extinction as a result of its extensive use during the holidays.

**Cheerful Flower Stores**

If there is any one kind of store which ought to maintain an atmosphere of cheerfulness it is a flower store. Other things being equal, customers will invariably pick out a store where a sense of good cheer is manifested. Nevertheless, there are many flower shops which have a pathetic suggestion of sadness and gloom. It is true that much of the business done by some florist establishments is in the way of funeral work, but that is no excuse for a funeral appearance in the store itself, nor for an air of general despondency and lack of alertness on the part of the clerks. Why, even the undertakers are beginning to add a more cheerful note to their places of business!

Without question the store atmosphere has a very direct and very marked effect on the sales. There are store owners who have realized this fact for many years, and are enjoying prosperity as a result. The store which radiates good cheer is going to be visited time and time again by patrons whose first call was casual, and who would not come back at all if they felt a depressing influence. Moreover, customers will tell their friends of a store where cheerfulness is conspicuous. It is not quality alone nor price alone, nor the two together, which sell goods. The general atmosphere of a store has much to do with the matter.

This does not mean, of course, that the store must put all its emphasis on its decorations, or the attitude of its clerks. There must be fair dealings, of course, but the other matter is almost as important. There are some stores in which people feel like spending money. There are other stores where they feel wholly indifferent, and where money must be coaxed from their pockets by the skill or artfulness of the salesman. To tell the truth, there are some flower stores which the visitor gets out of as soon as he can and to which he will not return unless forced by pressure of circumstances.

How to make a store cheerful is a matter which must be studied by the owner. The same rules will not apply in all instances. There must be color decorations which are pleasing, cheerful and harmonious. It is well known that some colors are depressing, while others engender hopefulness and optimism. These are matters for a decorative expert to decide. In many instances it would be far better to enlist the services of a man who has made decorating his business than to rely upon one's own judgment or to use colors and decorative features which happen to have a personal appeal.

It goes without saying that a cheerful store must be well lighted, but with a marked freedom from glare. A soft, mild light but plenty of it, with no dark corners or gloomy alcoves, is bound to make a good impression.

There must be plenty of flowers in a cheerful flower store. An over-abundance of palms or greenery of any kind has an opposite effect from the one desired. In not a few flower stores, the ice chest is a great drawback. There are some ice chests which add to the beauty of an establishment, because they are designed to harmonize with the other features. There are other stores in which it stands out in such a conspicuous way as to be an offense. The ice box which makes the best impression is one which looks most like a room in which the flowers are displayed for attractive effects. If it looks merely like a box in which a lot of blossoms are stored until they can be gotten rid of, the impression is bad.

Finally there are the clerks to be reckoned with. Here is a great stumbling block. It is difficult to get men and women who always wear a cheerful countenance, whose voices are always pleasant and even-toned, who never yawn in the face of a customer, or appear offended if they fail to buy. Yet this is the kind of sales person that helps to build the success of a store. The clerk needs to be as healthy and robust as possible. People dislike dealing with a clerk who looks ill enough to be in bed, or tired enough to drop from exhaustion.

It must be remembered, though, that the character of the store will be reflected in a large way in the appearance and general attitude of the clerks themselves. A store which has a dyspeptic atmosphere is likely to produce dyspeptic clerks. They will react to depressing color combinations and inartistic decorations quicker than the customers themselves, because they are with them all the time. Clerks in such a store will not have a contented state of mind. They will come to appear nervous and high strung, and clerks in this condition are not fitted to meet customers.

Probably there are many people in the florist business who will scoff at these assertions, but they are not the florists who are making greatest headway. The psychology of selling embraces a wide range of subjects, and while the name itself may mean little, the facts are found to mean much to every owner of a retail store.

# GRAFTED ROSES

It may seem early to talk roses for next spring, but we have been booking a lot of spring orders and you, who may be wanting a big lot early, may feel disappointed if we are not able to give you what you want when you want it.

Take up the question of spring requirements early!

**A. N. PIERSON, Inc., Cromwell, Connecticut**

# DISCUSSES CHRYSANTHEMUMS

## Charles H. Totty, of Madison, N. J., Gives Lectures in Boston

Two interesting lectures on chrysanthemums and their culture were given in connection with the Chrysanthemum Show at Horticultural Hall, Saturday and Sunday, when Charles H. Totty, of Madison, N. J., was the speaker. Mr. Totty had with him a large collection of hardy chrysanthemums, which he used to illustrate his talk. He said that this year had been rather unfavorable for out-door chrysanthemums, the continued warm weather having made the plants soft, so that they were easily killed when a sudden cold snap came. He had found, though, that oftentimes when flowers were destroyed by early frosts the buds which remained on the plants opened later.

He advocated planting the early flowering varieties from France in the garden, as, although they are not quite so hardy as other kinds, they flower in advance of the others. He believes it is worth while to give some special protection in the form of a wind break if necessary, so that the flowers will escape the first frosts, which usually come from the north or northeast.

He told of one estate superintendent who is just as careful to have a good fall garden as to have a good spring garden, relying upon chrysanthemums of various kinds, and using them in a sheltered place

Chrysanthemums are not particular as to soil, he said, but should be divided every spring, that being a point where many amateurs make their mistake. A small plant set out in April or May, and pinched back when four or five inches high, will make a strong, bushy plant by fall, and be filled with bloom. A little liquid manure given in July and August will be helpful.

If flowers cut for the house do not keep well, it is because the stems have become too hard. The remedy is to pound the ends of the stems with a hammer or mallet to break the tissues.

Mr. Totty likes oak leaves as a covering in winter, and warned against uncovering the plants too early, saying they were likely to get a start and then be frosted in the Spring.

For Pompons he recommended Anna Moran, Julia DeWitt and Sarah Townsend, which are bronze varieties; White Doty, Mary Anna and Snow Bird as white kinds; Zenobia, Connie Dick, Sidney Mitchell and Clara Jameson as yellow varieties, with Mrs. William Harrison as a good pink. Among the singles he considered Buckingham, Ida Skiff and Countess of Egmont as good bronzes; Charlotte Waite, Mrs. William Buckingham and Iva Grant as good pinks. He called Garza a particularly good white Japanese Anemone. Among the early flowering kinds he spoke of Yellow Advance, Seven Oaks, Mrs. H. Crosby, all of which are yellow; Normandie, and Charles Jolly, which are pink; Arthur Barham, Firelight and L'Argentuillius, which are bronze; with Belle Noll and Smith's Advance as white.

## SIDE DRAINAGE OF FLOWER POTS

At the recent convention of the Canadian Florists' and Gardeners' Association in Montreal, Mr. A. Walker of McDonald College, presented the unique idea of using flower pots with side drainage. Introducing the plan, he said:

"Some ten years ago I conceived the idea that the flower pot might be improved from the standpoint of the position of the point of drainage. After reasoning the matter out I became convinced that the idea was sound. Off and on since then, plants have been grown in such pots to my utmost satisfaction, so that to me at least the experimental stage is a thing of the past.

"The proposed change is a simple one, the point of drainage being in the side of the pot, the lower edge of the hole being on a level with the interior bottom."

Mr. Walker states that he proposes to push the idea hard and claims for the side drained pot that the aeration is as perfect as possible because the point of drainage is well above the material on which the pot rests, and that there is almost complete elimination of earth worms. He says that the plants can be turned out of the pots as readily as with bottom drainage, and that plants may be allowed to go a much longer time without being watered, when necessary.

The Leith Floral Co. has been incorporated at Haverhill, Mass., with a capital of $15,000.00, by Ella F. Kaulback, Frank A. Leith, Jr., and William J. Leith.

W. J. Carlton has completed a new greenhouse on Bridge St., in Beverly, Mass.

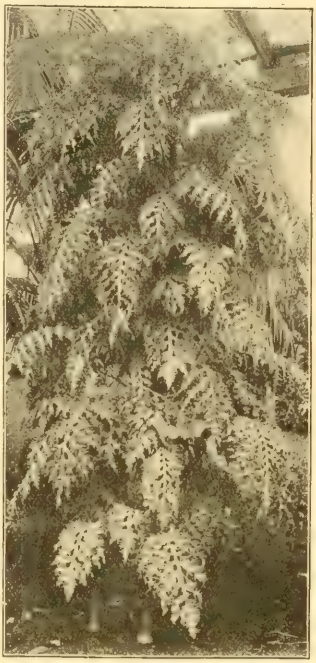
## DRANK FROM FLOWER POTS

### Guests at Buxton Dinner Also Ate From Flower Pot Saucers

An unusual dinner was given by Mr. George H. Buxton, the well known florist of Nashua, N. H., Monday, to the Nashua Rotary Club. The occasion was the celebration of Mr. Buxton's 38th year in business. Several florists were invited guests, among them, Harold Patten of Tewksbury, James Clark of Manchester, N. H., S. A. Goddard of Framingham, William Hathaway of Brockton, George H. Noyes and Gustav Thommen of Boston. Maj. J. H. O'Keefe was the principal speaker, and talked on advertising, with allusions to the development along this line done by the florists of America.

About 70 men sat down to the dinner, which was a most unique affair. The tables were set in the small greenhouse adjoining the office. Flower pots and saucers from the Hews Pottery Co. of Cambridge, Mass., especially prepared for the occasion and glazed on the inside, were used for serving the food. Large glazed saucers took the place of plates, while pots of different sizes were used for serving the soup and the coffee. The openings at the bottom of the pots were, of course, sealed up.

This was not the only unusual feature of the dinner, however, as both the coffee and the soup were poured from large watering pots. The whole affair was quite different from the ordinary dinner, and was hugely appreciated by the Rotarians and florists present, all of whom voted Mr. Buxton unsurpassed as a host.



## THE FLOWER MARKET

There are too many chrysanthemums in the market. They have slowed down business all along the line, and selling has been dull this week. Large "mums" are selling from $1.50 to $4.00 a dozen. Pompons are from 35 cents to $1.00 a bunch. Carnations are from 2 to 4 cents. Violets are very scarce at $1.50 a bunch. Snapdragons are scarce and poor. Some callas are in, and are selling from $2.00 to $2.50 a dozen.

## POLYPODIUM MANDIANUM

Among the interesting exhibits at the flower show at Horticultural Hall, Boston, last Saturday and Sunday, was a very fine specimen of Polypodium Mandianum, exhibited by A. W. Preston, and for which he was awarded a gratuity.

Polypodium Mandianum

This novel fern was put out by W. A. Manda, of South Orange, N. J., in 1913, after he had accumulated a large stock. The plant has been awarded high honors, both in this country and abroad. It is one of the plants in which Mr. Manda has taken the keenest interest, and when well grown is very beautiful.

The fronds of Polypodium Mandianum are laciniated, crimped and undulated in the most charming manner, so that they are very decorative. The plant thrives best in shallow pots or pans, being a surface grower, and seems to be equally happy if merely attached to a clump of ormunda fibre and suspended against the greenhouse wall, with water as its chief requirement. Even when grown in this way the fronds will achieve enormous size and remarkable substance. Mr. Manda has grown specimens with a spread of ten feet.

## TARRYTOWN FLOWER SHOW

### Some of the Newest Flowers Exhibited by Commercial Growers

The 24th annual exhibition of the Tarrytown Horticultural Society was held in Music Hall, Nov. 1, 2, and 3. The exhibit, while not as large as in former years, was of superior quality.

The hall was a bower of flowers beginning with the beautiful setting on the stage of an exhibit of palms and flowering plants by William B. Thompson of Yonkers, continuing in beauty to the rear of the hall with roses, chrysanthemums and other flowers and decorative plants.

In the front of the stage was a beautiful exhibit by F. R. Pierson of roses, including a particularly fine vase of Francis Scott Key chrysanthemums, ferns and palms, which received honorable mention.

Beautiful exhibits were received from Mrs. F. E. Lewis of Ridgefield, Conn.; R. C. Colt and Stuyvesant Fish of Garrison; H. H. Rogers, George F. Baker, J. Insley Blair and H. M. Tilford, of Tuxedo Park; Mrs. J. I. Straus and Mrs. Moses Taylor of Mount Kisco; D. E. Oppenheimer and Samuel Untermyer of Yonkers; H. Sidenberg of Hastings; R. A. Strong and E. E. Smathers of Port Chester; Clarence Whitman of Katonah; Frederick P. King and Hugh Hill of Irvington; H. E. Rogers of Scarborough; H. L. Van Praag and J. I. D. Bristol of Chappaqua; and Dr. Joseph A. Blake, Dr. C. C. Brace and Mrs. J. J. Halle, of Tarrytown.

A Silver Medal was awarded to an elegant vase of Roses, "Hill's America," exhibited by Charles H. Totty of Madison, N. J., and a Cultural Certificate to a fine vase of Roses, "Commonwealth," exhibited by A. N. Pierson of Cromwell. Honorable Mention was awarded to Hubert E. Rogers for an exhibit of Scotch Heather and Hubbard's Squash and a Cultural Certificate to Mrs. F. E. Lewis for a vase of Yellow Carnations, "Maine Sunshine," and to Asa Dolen an Award of Merit for Leaf Burner.

**RUBBER PLANTS**

Rubber plants strong from 5½-in. pots, $9.00 per doz. Cash with order.
DeVita's Conservatories, Wakefield, Mass.

**PEPPERS**

Xmas peppers from 3½-in. pots, $18.00 per 100. Cash with order.
DeVita's Conservatories, Wakefield, Mass.

**CLEVELAND CHERRIES**

Cleveland Cherries, full of berries, $6, $9 and $12 per doz. Cash with order.
DeVita's Conservatories, Wakefield, Mass.

## SNAPSHOTS FROM A CORNELL STUDENT'S NOTE BOOK

On Saturday, October 27th, the students in commercial floriculture under Professor Nehrling at Cornell University and Ralph J. Roskelly of the Bool Floral Co. spent the day inspecting various practical phases of the floriculture business.

The two cars carrying 14 students arrived in Auburn and visited Shaw & Boehler's range, finding a young progressive concern with an unmistakable atmosphere of success about them. Their 20,000 square feet of glass cover all the seasonal crops with an emphasis on carnations. From there to the "Patrick's Retail Store," which has been very attractively remodeled within the year.

Mr. Gilbert next acted as host at the Melrose Nurseries, and we were favored, among other things, by the sight of his Mme. Cochet rose stock which dates back to the first years of that variety's prominence. Mr. Gilbert in a limited experiment finds it satisfactory to allow the development of three chrysanthemums to one plant in the large double types. There is no decrease in flower size.

Next, to Syracuse and dinner followed by inspection of the busy concern of W. F. Bultman's Retail Store, where we found them pushing the sale of bulbs. The retail store of the J. P. Quinlan Co., the oldest firm in Syracuse, was also visited.

Mrs. L. C. Smith's Conservatories with their excellent collection of conservatory plants were visited. By this time the process of loading and unloading ourselves from the cars had been mastered to perfection, and we hustled on to "D. M. Edward's Range" at East Onondaga. They are setting up houses which had previously been used in connection with their home on James St. Their bench installation featured tile bottoms and iron pipe legs, resting upon a strip of cement five inches wide. This cement strip ran without interruption along under the front of the bench, bordering all walks, with three inches in the floor and six inches above the ground. Thus a sure foundation is obtained and the cement ledge used for setting pots on.

At Quinlan's Range we inspected and eagerly dogged the footsteps of Supt. DeWire until after dark.

May we take this opportunity to further express our appreciation to those florists we visited and to thank them for our cordial reception.

R. B. FARNHAM.

## MR. DUNLOP NOW A THIRTY-THIRD DEGREE MASON

Mr. John H. Dunlop, the well known florist of Toronto and Richmond Hill, Ont., has long been very prominent in the Masonic order. He was recently in attendance at a Supreme Council of the Ancient and Accepted Order of Scottish Rites at Montreal, Quebec, and on that occasion received the thirty-third or the last degree of Masonry.

## KROESCHELL BOILERS AT MAYWOOD

A recent report placed the total glass area of Maywood, Ill., growers at 1,460,000 square feet of glass. It is interesting to state that the Brunswick-Kroeschell Company has furnished boilers to heat over half of the glass mentioned; in fact, Kroeschell Boilers, both high pressure steam, low pressure steam, and hot water, are heating 870,000 square feet in this district. Over 1530 horse power boiler capacity is utilized for this purpose.

In addition to the boilers, all of the mechanically-cooled Refrigerators of the Maywood colony are equipped with Kroeschell Ice Machines.

BECOME A LANDSCAPE ARCHITECT

Dignified, Exclusive Profession not overrun with competitors. Crowded with opportunity for money making and big fees. $5,000 to $10,000 incomes attained by experts. Easy to master under our correspondence methods. Diploma awarded. We assist students and graduates in getting started and developing their businesses. Established 1906. Write for information; it will open your eyes. Do it today.

American Landscape School 74-J Newark, New York

# THE DAHLIA

On a recent trip to East Bridgewater, I was interested to note the way in which dahlias at the J. K. Alexander establishment are stored. In the basement of the storage house are a long series of bins about three feet wide formed by loosely made board partitions. The bins are entirely open in the front, and have cleats on the sides at intervals so that shelves may be placed across them.

The dahlia clumps are placed in these bins after being dried a little in the open air, and always with the stump down, so that the juices in them will drain out instead of running into the bulbs. According to Mr. Alexander's son, Herbert, most of the trouble which comes from keeping dahlias through the winter is due to these juices which cause decay to start quickly. This is assuming, of course, that a cool but frost proof cellar is used, with an atmosphere which is not too dry.

---

There are some varieties which many dahlia growers have found it very hard to winter. Geisha is a good example. When tubers of this character are stored, the stock is cut off very close to the clump, and division of the roots is begun just as soon as possible. Oftentimes the roots are divided within a week or two after they have been dug. In fact, Herbert Alexander, on his own private place, often cuts the roots of these hard-to-store dahlias as soon as he gets them out of the ground. Each tuber is separated from the stalk and the loose roots cut off. Stored in this way practically all varieties can be kept without difficulty until the next spring. Several million dahlia bulbs are being put away this year, and according to Mr. Alexander, he anticipates a very small loss.

---

Here and there a florist is found who is particularly successful in the use of dahlias for funeral pieces. Barrow, the florist of Meriden, Ct., is one such florist. On a recent visit to his store I was surprised to see the remarkable effects being obtained by him, especially with dahlias of the show type. He had a pink variety and a white variety which were especially handsome, and when made into sprays proved very effective. Mr. Barrow grows his own dahlias so that they cost him but little. The late flowers, coming at a time when chrysanthemums were scarce and high, were especially valuable this year. The time was that customers would not have been well satisfied to accept dahlias as funeral pieces, but there has been a change in this feeling, so that if they are made up artistically they can be used safely and satisfactorily.

---

Mr. John M. Root again won the sweepstakes for dahlias at the recent show of the Collingswood (N. J.) Horticultural Society. He already possesses as a permanent trophy the three-year cup of the Society, and this year won the Collingwood Drug Co.'s silver cup. He had a very remarkable exhibition. He also won the Horticultural Society's gold medal for the best vase of fifty blooms.

W. D. Hathway, in Black Beauty, exhibited a dahlia which attracted much attention. His Pacific Glow, a pink dahlia, was also a very fine flower.

## BOSTON

Carrick C. Wildon, who has been an assistant on Faulkner Farm, near Boston, under the superintendency of W. N. Craig, has been appointed instructor in floriculture at the Rhode Island State College. Mr. Wildon will also have charge of the college greenhouses. He graduated from the Massachusetts Agricultural College in 1916, and was instructor in horticulture for two years.

**IRIS AND PEONIES**

Having a large stock of the following Iris will quote special prices for early delivery as I wish to clear the ground: **Arnols, Brooklyn, Darius, Dr. Bernice, Exquisite, Gypsy Queen, Halfdan, Helge, Ingeborg, Jacqueminot, Liabaud, Lord Salisbury, Mme. Chereau, Mithras, Mrs. H. Darwin, Nibelungen, Princess of Teck, Queen of May, Rhein Nixe, Rose Unique, Shakespeare, Sherwin Wright, Walhalla, Walneriana, Ven Geerti, Hector.**

Ask for price list and see what my customers say about the service they receive. Thank you.

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

## NEW ENGLAND NOTES

Herbert V. Sowle, of New Bedford, has asked the Superior Court to enjoin Frederick L. Sowle and Clifton L. Sowle from continuing in business in such a manner as to injure the business of the complainant. It seems that there has been considerable confusion as a result of the similarity in names.

Miss Alice Liggit, of Lowell, was recently given a miscellaneous shower in view of her coming marriage to William Collins, the well-known Gorham St. florist.

Reuben Popkin was recently fined $25.00 for transporting a dozen gladioli from Boston to Providence without having them inspected. Mr. Popkin is a well known florist.

John Comley, a well-known florist of Amesbury, Mass., was recently married to Miss Ethel V. Sherman, of Boston.

Arthur E. Stantial, of East Belfast, Me., expects to force large numbers of Holland bulbs in the new greenhouses which he is erecting, having made a large importation this year.

George M. Roak & Co., florists, are to open a downtown store in Bartlett's Block, Auburn, Me.

## "PLAN TO PLANT ANOTHER TREE"

Gentlemen:

The "Plan to Plant Another Tree" movement is one of the subjects which deserves the attention and co-operation of every person in our country and especially the florists and nurserymen in whose hands it lies to make this possible.

Men in authority including President Harding are encouraging the plan. The good road commissioners all over the country have started the planting of trees along the highways and most of our States are very interested in furthering the cause.

Plan to Plant Another Tree together with the plan of reforestry are the vital things which make for better citizenship. The trees along the highways add 100% to land values and supply a long needed want for all of our people.

I trust the Nurserymen will realize their responsibility, for it is up to them to provide the need. Let us all put our shoulder to the wheel to carry on a duty which we owe not only to ourselves but to future generations.

Yours very truly,

PHILIP BREITMEYER.

# S. A. F. & O. H. Department

## NATIONAL FLOWER SHOW

Believing that the time set for receiving invitations for the holding of the next National Flower Show, Monday, November 6, possibly would not allow of sufficient time for a proper consideration of the project, Chairman George Asmus of the National Flower Show Committee, after further communication with his committee members and other officials, has postponed the meeting of the Committee called for that day in Cleveland, and the next day in St. Louis, until such time as will insure properly considered invitations being before the committee. All cities able to house a National Flower Show are urged to give the matter of the necessary invitation to the Society attention without delay, and file a formal proposition with the Secretary, with full particulars as to size and scope of hall, and special inducements, if any, which may be offered in the circumstances.

JOHN YOUNG,
Secretary.

## THE LATE CHARLES FROST

Deep regret is expressed throughout the trade at the sudden death of Charles Frost, the famous pansy specialist, at his home in Kenilworth, N. J. Mr. Frost was 76 years old. He was born in England, but same to America soon after being married. Establishing himself on a five-acre farm he gradually became interested in flowers and started to make pansy-growing his life work. He carried on a general flower business, but the pansy line developed very rapidly because of his exceptional skill and the Kenilworth varieties are now being grown all over the continent. Mr. Frost was a man of unusual fairness and honor, and was especially careful to see that his seed was as represented. When Cornell University put out its Encyclopaedia of Horticulture, Mr. Frost was chosen to write the article on pansies. He had a great many friends and was held in high esteem by all. Hs is survived by two daughters and one son.

**GREENHOUSE GRAPE VINES**

8-in. pots, 2-yr. old 8-9 ft. long in excellent condition for fruiting next year.

**CARTERS BULBS AND SEEDS**

Carters 1922 Bulb Catalogue contains a great many new and meritorious varieties of Spring and Summer flowering Bulbs and Seeds. The catalogue also contains a complete general list of the most popular and reliable varieties at present in demand.

**CARTERS TESTED SEEDS, Inc.**
**53 Barclay Street** **New York City**

# George Watson's Corner

"You in your small corner and me in mine."

The demand for bulbs and other fall requisites has been unusually good this season at all the seed stores and most of them report being pretty well sold out.

Mole street has lost one of its diggers. Martin J. Gannon has moved up to 1625 Ranstead park, just above Ed. Reid's place. He is now making a specialty of florists' greens in partnership with P. J. Millar. Both of these gentlemen are thoroughly grounded in the business and understand it from top to bottom. We wish them every success in their new venture.

The recent happenings in the cut flower world are many and various. The most important, from an independent viewpoint, is the outgiving of Elmer Weaver. He has a wise old head, and what he says is worth listening to. Read it again. There is only a limited demand in summer for cut flowers, because the well-to-do have plenty of their own. They have gardens and grounds. The city folks buy some, of course; but not a great deal. So the only source of outlet is easily overdone. And it has been bady overdone. Just because Jim made $116 out of an acre, a dozen of his neighbors started in with an acre (some of them with 16 acres, some with 100 acres) and of course the market was busted. Carloads and carloads of lovely flowers dumped in the waste places of the Neck! No returns, and the shippers had to pay the freight. So endeth the sad story. Moral: Never overdo. If a man stands up too darn straight he may fall over backwards!

The one boy he says, where can I can get a hair cut around here. The other boy says, why the nearest barber shop, of course. And then, wow! But that only leads up to John Kuhn and Arthur Niessen. The three of us were talking very friendly when suddenly there was a bumble rumble brush crash of German. John turned around with a laugh, "Ah, we had you there, George, you didn't see the joke." I acknowledged the corn. John swelled up a little and, says he, "Any man who is doing an important international business in grass seeds should have at least three languages:—English, French and German." George still acknowledged the corn; but added

that under these present day Volstead regulations he even had trouble in getting it down in good Scotch. Well, they may be German; but it only took about four seconds to get that one!

---

Robert Craig and Paul Huebner have both been under the weather for a couple of weeks or more; but they are around again and looking their old selves. Robert is down on his doctor, because he refuses to let him out to see about his ticket and things for his trip to Porto Rico. Paul is cheerful, because he can come in once more and have a chin with his friend Looie at Dooner's. Sounds normal for both old timers, and we all feel better, and extend our best wishes. He expects to go to Florida next week for a vacation.

---

In the dry goods business when they want to stir things up they slash prices way below cost. In the flower business they go about the opposite. They raise prices. Sounds funny, but just ask Al Jones and he'll tell you taint funny at all but true.

---

That's the flower business for you and it sounded very funny to me. So I had to rehearse it to my wise and witty haberdasher friend on Tenth street and thought he'd laugh but he didn't. He said, "Why shaw! that's not confined to the flower business, I had a nice collection of neckties once on display, sixty cents, splendid value. Nobody wanted them. They hung fire. One day a fellow came along and I was growling to him about them. He said, why not put them up to a dollar. That sounded silly; but I did it, and upon my soul, I'd sold the whole lot inside of three days. What do you know about that! Isn't human nature the queer combination!"

---

*When writing to advertisers kindly mention HORTICULTURE*

The John C. Meyer Thread Co. were the first to introduce the Meyer green Florists' threads that would not fade or change color for Florists' use. Ask any of the wholesale Florists or growers about the Meyer green Florists' thread and they will tell you it is the best.. It will go twice as far as ordinary thread and the Florist can do better work with it. Write for prices and samples and we will see that you get the best thread in the world.

of Parks, Wilkes Barre, has returned from his European trip, and is busy again with his official duties. He and his good lady had a very interesting time on the other side, and visited many of the important horticultural centers.

## GENERAL NEWS

Johnson, the Florist, of 163 Broadway, Bayonne, N. J., has been incorporated, with a capital stock of $10,000.

The Rosary Garden Shop has opened a new store at 160 No. Main St., Elmira, N. Y.

As a result of the boiler explosion in the greenhouse conducted by Mrs. Henry Neum, at Rochester, N. Y., damage amounting to $4,000 was done. A large shed used for storing bulbs was destroyed.

A florist committee consisting of F. R. Pierson, of Tarrytown, N. Y., A. H. Nehrling and R. J. Roskelly of Ithaca, F. A. Danker of Albany, Werner Butman of Syracuse and W. A. Ames of Buffalo has presented the New York State Fair Commission plans for a new horticultural building to cost $350,000. When completed it will be the most modern type of building for horticultural and floricultural exhibition purposes in America.

Myron Ford, of Weymouth, has increased his business to such an extent that he is now sending chrysanthemums to Boston, many of them going to Houghton Gorney.

# Principles and Practice of Pruning

By M. G. KAINS

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The accumulation of new knowledge has become very considerable, especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book as this, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth. This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself, a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery. There are 400 pages in all.

# Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, $2.25.

## BOSTON

Mr. C. O. Ranck has opened a new flower shop at 573 Washington St., Dorchester. A good sized ice chest has been installed at the rear and an attractive lattice work arrangement in the display window. Mr. Ranck has an excellent location and reports that business so far has been very good.

Mr. M. A. Derringer, of Atlantic, has come to be one of the best known florists around Boston. He has been in one location for over 20 years and has seen many changes during that time. While he has a range of greenhouses, he grows few cut flowers apart from chrysanthemums, but devotes much of his space to bedding plants, for which he finds a great demand, his establishment being surrounded by pleasant suburban homes.

H. M. Totman, the well known florist of Randolph, Vt., and president of the newly formed Florists' Association of Northern New England, was a recent visitor in Boston, going from here to New Haven.

Charles Strout, the carnation specialist of Biddeford, Me., spent a short time in Boston last week.

Mr. R. T. Brown, of the Cottage Gardens Nurseries, Queens, L. I., was a recent Boston visitor.

Miss Eunice M. Belcher is to open a florist shop at No. 1 Crest Ave., Winthrop.

Ray C. Eldridge, formerly employed by a Boston florist, has opened a florist establishment on Plymouth St., North Abington.

The wholesale florist establishment of Welch, Inc., on Summer St., closed its doors several days ago and has not been reopened. It is understood that financial difficulties have overtaken the concern, which has been managed by Ed J. Welch. This does not, of course, in any way effect Welch Bros., which concern is still carrying on a good business at 262 Devonshire St.

Julius Quint and George Goldberg have an unusually good location for the new florist store which they opened last Saturday in Park Square. They are soon to have an additional window which will make the store even more conspicuous. They are doing business under the name of The Statler Florist, in anticipation of the coming of the Statler Hotel.

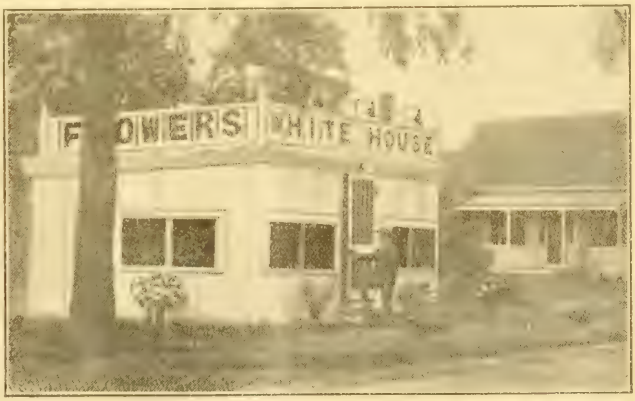
Vol. XXXVI NOVEMBER 25, 1922 No. 10

## THE TALK OF THE TRADE

James Wheeler, of Natick, Mass., has had astonishing success with Godfrey callas. From a very small beginning with these lilies he has seen his trade increase until now he is erecting a new house 43 feet wide and 300 feet long, which will be planted exclusively to Godfrey callas. He already has one house in which nothing else is grown, and will keep that house for callas also. The present house will accommodate about 6,000 plants, but there will be room for fully 14,000 plants in the new house. I have written before about Mr. Wheeler's methods, particularly his plan of planting the callas in beds directly on the ground. These methods have been found so satisfactory that they will be followed in the new house. Very few bulbs have been sold this year, as almost the entire stock has been required for new planting. Some of the bulbs grown are of enormous size, measuring seven or eight inches in length and weighing one and a half pounds apiece. The flowers go almost entirely to the New York market, where they are in great demand. Mr. Wheeler considers the total output of his two houses already as good as sold.

I don't know anything about the prohibition principles of Harlan P. Kelsey, the well known nurseryman and landscape architect of Salem, but I can vouch for the fact that he is a great stickler for water when it comes to setting out plants of any kind. I doubt if there is another nurseryman in the country who uses so much water in proportion to the size of his plant. Mr. Kelsey never sets out a block of trees and shrubs without using water in great abundance. Pipes lead to most sections of the plant, but if necessary the water is carried in a spray wagon. A heavy application of water is made every time a plant goes into the ground, with the result that there is very little loss. The water carries the soil into every opening around the roots so that no air pockets are left, and gives the plants an opportunity to make an immediate start.



An old orchard man when asked about pruning replied that the best time to do the work was when the knife was sharp. Mr. Kelsey has much the same idea about planting. He believes that plants of most kinds can go into the ground at almost any time if they are moved carefully and given water in abundance.

Mr. Kelsey, as is well known, has long specialized in Carolina hemlocks, and a few days ago shipped two carloads of these trees to a landscape man in Missouri.

Florists who use natural manures will do well to study the effects of acid phosphate used in connection with them. With the growing scarcity of manure and its consequent increase in price, it becomes necessary to economize in every way possible. Long experience has shown that the use of acid phosphate greatly increases the value of manure, the latter not being in itself a complete fertilizer. Moreover, the acid phosphate, if used with the manure at the time it is made, prevents much loss of ammonia. If cows are kept, it is a good plan to scatter the phosphate in the gutters or over the fresh manure. If the manure is purchased the phosphate can be mixed with the manure as it is piled. It is considered that 40 pounds of acid phosphate mixed with a ton of barnyard manure is about the right proportion.

W. S. Harris is one of the group of men who have made Mansfield, Mass., famous as a gladiolus growing community. Mr. Harris has some unique ideas, several of which have done much to make him particularly successful in selling both bulbs and flowers at retail. Mr. Harris has constructed a special building not far from his own home, which he calls "The White House." It is painted white and the name stands out very conspicuously. At night the building is brightly illuminated with electricity.

During the summer months great quantities of gladioli are displayed in the building and along the roadside in front. Then, when cold weather comes on, bulbs are exhibited inside the house. Long rows of trays have

—Courtesy New England Homestead

**Unique Salesroom of the Well-known Gladiolus Grower, W. S. Harris, at Mansfield, Mass.**

been arranged on shelves in which the different varieties are displayed. All the varieties bear name tags. The building is a very convenient rest room for motorists passing through the town, and visitors are always welcomed.

Incidentally, Mr. Harris adds not a little to his income by selling eggs. He keeps a large flock of poultry on the opposite side of the street, and always has a supply of fresh eggs on hand. The combination of bulbs and eggs is one which seems to work out particularly well in the Winter months.

Mr. Harris has a very large collection of gladioli and makes a point of keeping in stock all of the latest and most popular varieties because he finds amateurs in particular are now pretty well informed about the different kinds and want the newer sorts, even though they pay a fairly high price for them.

Besides being a first class florist Miss Irene Hayes, of New York, is remarkably successful in obtaining publicity. Papers all over the country have recently been publishing articles sent them, illustrated, about her work. This was made possible by finding a new line to exploit. Miss Hayes recently visited Europe and on her return gave out interviews which were taken with avidity. In these interviews she compared the work of continental and English florists with that of florists in America.

She is quoted as saying that the Frenchman sends his sweetheart many a gorgeous bouquet, but that it is only a bouquet, with no subtlety of expression. She says the Austrian florist picks out what he likes and ships it along on the theory that the recipient is bound to like it. The Englishman, she says, runs to quantity and nowhere are bouquets so massive as those he sends. In her opinion, though, there is more meaning in the single little bloom of the right sort than in the whole garden of hit-and-miss flowers.

Miss Hayes is set down as the dictator of fashion in flowers. The newspaper writers say that she is planning a campaign of flower education and has decided to lead in making New York the world's flower center, just as Brussels is first in lace, Paris in styles, etc. All this may sound a bit flamboyant, but without question it is first class advertising for Miss Hayes, and incidentally for the trade at large.

Henry M. Bradley, Sr., the well known florist of Derby, Ct., has been seriously ill for several weeks.

# EXPERIENCES WITH OIL

## Florists Tell What They Have Learned about Oil as a Fuel

At the last meeting of the Horticultural Club of Boston, with President Ernest H. Wilson in the chair, Mr. Gustave Thommen gave an exhaustive talk on the subject of oil burning in greenhouses, which was followed by remarks on the part of several members who have installed oil burning outfits. Mr. Thommen predicted that within ten years every florist owning a greenhouse and situated so that oil can be delivered to him would be burning oil. He said that Mr. Budlong, the famous Rhode Island rose grower who has had several years' experience in heating his immense establishment with oil, told him that he would close down his houses rather than use coal again. Mr. Budlong was very fortunate in having a contract for oil at a low price which runs until 1935, under the terms of which the oil company pays a forfeit if a specified quantity is not kept in the tank at all times. Mr. Thommen further said that so to speak every greenhouse in Providence and vicinity is now burning oil.

### Oil Must Be Warm

Describing the method by which the oil is handled, Mr. Thommen said that it must be warmed sufficiently (to about 100 to 120 degrees) to flow freely on its way from the tank to the burner. A method of keeping the oil properly heated in the storage tank must be used. The common plan is to pipe the exhaust steam into the tank. If a large enough tank can be provided, it is wise to buy the oil in the summer months when it is easy to handle, and when the price is much lower than later in the season. If it must be purchased in the winter, it may be delivered warm, being heated by the oil companies before it goes into the motor tanks. The companies do not much like to deliver outside of a fifteen-mile radius of Boston. Florists have an advantage if there is a railroad siding leading to their establishments. There must be an electrically, steam or gas driven pumping plant for pumping the oil from the tank into the burners. Some growers using electricity provide an auxiliary steam or gas engine to use in the case of emergencies. If it should ever become necessary or advisable to burn coal again, the oil burning apparatus can be quickly removed, the grates can be put in place again, and a coal fire built at once. This will take only two or three hours.

There are several kinds of burners and no grower should make an installation without expert advice as to which is the most suitable. A burner throwing a long flame should not be used in a short fire box as it will cause trouble.

There is a question as to the value of the automatic devices sometimes installed, good reports being obtained from some growers while others have removed them. In any event, with the use of oil the labor cost is greatly reduced as one man can do the work for which four or five men were formerly required. An oil burning apparatus needs almost no attention, and a perfectly even heat is maintained.

### Allan Peirce's Installation

Mr. Allan Peirce stated that he had just completed an oil burning installation in his rose houses in Waltham. He has two very large water tube boilers mounted eight feet above the ground, and with a fire box fed through the ash pit. Much of the apparatus was made on the place, the four old boilers, after removing the tubes, being transformed into oil tanks. A small steam boiler is depended upon to furnish the needed pressure for starting, because the system is of the steam atomizing type. Only 15 minutes are required to get up enough steam in the big boilers. The number of men formerly required for the boiler room are released for duty in other parts of the establishment. Mr. Peirce believes that the oil installation is going to give the greatest of satisfaction on his place.

### Harold Patten's Views

Mr. Harold Patten of Tewksbury, famous as a carnation grower, said that he had just started installing oil after several months of investigation, and is building an oil tank (reinforced concrete) of 65,000 gallons capacity. Remembering the ice storm of a year ago when he had no electric lights for two months, he gave up any thought of using an electrical system, preferring to rely upon the steam-atomizing type of burners. His oil will be purchased in the summer and stored in a large tank some distance from the boiler house, kept warm by pipe coils using exhaust steam. It will be piped to the tank from a railroad siding belonging to

the Boston & Maine Railroad, some 800 feet from the greenhouses or boiler room. He believes that he can save money by buying the oil in summer and that at present prices he will save about $1500 a year over the cost of coal.

### As To Price

Mr. Fred Wilson was of the opinion that as soon as the business became stabilized the price of oil and of coal would be about the same, the coal and oil people getting together. But even so, the saving in labor costs and the great many conveniences connected with the use of oil would remain.

There was considerable discussion as to the effect of oil on the pipes and furnace walls. It was stated that in the case of many installations it had been necessary to make continual repairs. Apparently there are several matters of this sort which must be considered carefully, some systems being much less destructive of material than others. It is important to have the right apparatus for prevailing conditions.

Several growers present are considering the installation of oil systems and some of them said that they would be willing to pay as much for oil as for coal if they could save the annoyance and labor connected with the use of coal. It seemed to be the opinion at the end of the discussion that oil would gradually supersede coal to a very large extent in florist establishments because, even if at any time the price of oil should become the same as that of coal, oil would at all times offer the advantage of greatly reduced labor costs, greater efficiency, greater ease of operation and absolute cleanliness in the boiler room and adjoining parts.

## NEW ENGLAND SEED TRADE ASSOCIATION

There will be an important meeting of the New England Seed Trade Association at the Parker House, December 5. The luncheon will be served at noon, and among the guests will be Mr. Alexander Forbes, who will speak upon matters of importance to the seedsmen. Dr. Gilbert, Commissioner of Agriculture, is also to be present and is expected to talk about impending legislation which will affect the interests of the seed trade.

Fred E. Clark, Assistant Horticulturist at the New York Agricultural Experiment Station at Geneva, has been appointed Instructor of Botany at the Rhode Island State College.

# VISIT HALIFAX GARDENS

## Florists and Gardeners Inspect Famous Greenhouses

Nearly 125 people attended the field day of the Gardeners' and Florists' Club of Boston, held at Halifax Gardens last Saurday. It was a beautiful day, and a large number of florists

Eber Holmes
Noted Rose Grower who is Manager of Halifax Gardens

and gardeners went over the road. Mr. George Buxton, of Nashua, N. H., probably came the longest distance. Truly, the greenhouse plant at Halifax was well worth going a long journey to see. Mr. Eber Holmes was on hand to welcome the guests and had a pleasant word for each. He conducted them through the thirteen greenhouses in the range, and showed them also the fine dairy and the poultry plant where turkeys and guinea fowls as well as laying hens are kept in large numbers.

All the houses were in the pink of condition, but the display which seemed to impress the visitors most of all was found in the chrysanthemum house. This house is 300 feet long and contains an enormous number of flowers, and without question a very large cutting will be made for the Thanksgiving trade. The quality of the flowers can hardly be surpassed, both in the large flowered varieties and pompons. Mr. Holmes spoke particularly of Soleil d'Or, which he said was very much in demand, although he had tried to hold the flowers because of their late keeping qualities. Golden Climax, Eugene Langaulet and L. DeCanning, were among the others growing particularly well.

In one end of this house, from which an early stock had been removed, cauliflowers and beans were growing, string beans of the Bountiful variety almost large enough to harvest being seen. Naturally the rose houses received particular attention from the visitors, who are acquainted with Mr. Holmes' high reputation as a rose grower. There are some 30,000 plants in the house, including Columbia, Premier, Mme. Butterfly, Hadley, Ophelia, Pilgrim and Angelus; the last named, being new, was given special attention. It was growing very well, and seemed remarkably free from mildew. Mr. Holmes thinks very well of it. It seems quite probable that this entire range will eventually be put into roses, not only because Mr. Holmes is remarkably successful with them, but also because there is no other grower in that part of the country supplying roses. About half of the present crop is now sold to neighboring towns, including Brockton, Plymouth, Taunton, Rockland and New Bedford. Many roses are also shipped down the Cape.

At the present time there is one house given over to commercial orchids and several in carnations, in which about 70,000 plants are growing. Nearly all of the better known varieties of carnations are being grown. In the list is Belle Washburn, but Mr. Holmes says that this variety will be discarded from now on to be superseded by Doris. There is a good sized planting of Maine Sunshine, Rosalie and Thomas C. Joy.

The packing and shipping rooms at Halifax Gardens are particularly well arranged and are very commodious.

**WILLIAM SIM**
**CLIFTONDALE, MASS.**

It is here that the luncheon was served. After luncheon a paper on Dextrogerms as stimulants of plant life was read by W. N. Craig. This paper was written by Dr. Bernard Field, of Plymouth, who afterwards gave a short talk on this subject. Some experiments with Dextrogerms have been made in the carnation houses at Halifax Gardens. Plants at the ends of several benches are growing in common soil without any other enrichment than Dextrogerm. Apparently they are thriving just as well as the other plants growing in soil heavily fertilized with animal manures. As a matter of fact, the flower stems were a trifle taller on the plants where Dextrogerm had been used.

Incidentally Mr. Holmes said that the soil in the greenhouses had been renewed this season for the first time in many years.

A new florist shop has been opened at Thomaston, Ct., under the management of S. J. O'Rourke.

CHOICEST STRAIN
**JAPANESE IRIS**
(Iris kaempferi)

Thousands of fine transplanted specimens from selected seed imported from Japan. The colors are mixed and in hundred lots you will get all the gorgeous colors equal to the finest named varieties.

Strong transplanted $12.50 per 100; $110.00 per 1000.

## NEW BOSTON MARKET

### Plans for Stalls and Booths Now Completed

The old Cyclorama Building on Tremont Street, where Boston's new wholesale flower market is to be located, is a hive of industry just now, nearly a hundred workmen being engaged in remodeling the interior of the great structure. Judging from the speed with which the work is being carried on the market will be ready for business by the first of the year.

The arrangement of stalls has now been decided upon. There will be 300 small stalls, each 3½x4 feet. They will occupy a double row of benches extending down the middle of the room, with eight stalls in a section on each side of a middle walk seven feet wide. There will be wider walks on each side of the stalls, with a cross walk in the middle 10 feet wide. There will be booths along each side of the room for dealers, each 18ft. x 16ft. 5in. At one side of each booth there will be an office 18x10 feet, and at the other side a cooling room 8x10 feet. There will be 16 booths in all.

It has been decided to install a modern refrigerating plant in the market. The matter of having a restaurant there is still under discussion.

The space back of the building is to be cleaned up and used for parking cars at present. It will be 120x70 feet. There is also plenty of parking space along the streets around the building.

## HENRY M. ROBINSON CO'S NEW QUARTERS

The Henry M. Robinson Co. has signed a lease for the entire basement of the new market house in the old Cyclorama Building on Tremont Street. This will give them fully half an acre of floor space, and will enable them to greatly expand their business. An announcement has already been placed in a conspicuous position in the present store, announcing the change of location, and assuring the patrons of the company that their needs will be looked after to even better advantage at the new store than in the present quarters, where the concern is cramped for room. In the new store there will be a much better opportunity for a display of stock, as well as for caring for the company's patrons. The Robinsons will have their own refrigerating plant and will have an entrance entirely independent of that leading to the market room above. Without much question the Henry M. Robinson Co. is now the largest wholesale florist house in the country.

## *REMOVAL NOTICE*

**After January 1, 1923, we will be located at our**

**New Quarters: 541 Tremont Street**

We shall occupy one entire floor, which extends over an area of one half acre. While our service in the past has been unequalled our new facilities will permit us to increase our efficiency in every respect. We shall be enabled to carry a larger stock of florist supplies, and a greater variety. We shall continue to carry the highest grade of cut flowers procurable, and you will find that our service is unsurpassed.

Our Telephone Number Will Be **Beach 8870** **Boston, Mass.**

### NEW ENGLAND

Axel Magnuson is adding another house to his range, at Manchester, Mass. Mr. Magnuson grows most of his own material, occasionally having a surplus which he ships to Boston. The new house is being built largely of A. T. Stearns Lumber Co. material.

A new greenhouse is being erected on the Mrs. Lester Leland estate at Manchester, Mass., where Eric H. Wetterlow is superintendent. This estate has become famous for the quality of the winter-flowering begonias grown by Mr. Wetterlow, and it is understood that the new house will be devoted almost entirely to these plants.

J. W. Minot & Co., the florists of Portland, Me., who have been located for two years or more in a building on Congress St., are moving to a new store underneath the Columbia Hotel, as the old building is to be remodeled.

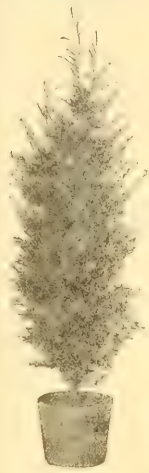
### J. K. ALEXANDER GOES WEST

**It Is Understood He Is To Establish a New Dahlia Farm in Oregon**

J. K. Alexander, the well known dahlia grower of East Bridgewater, Mass.,

J. K. Alexander



has gone to Hubbar, Oregon, where it is understood that he will establish a new dahlia garden, growing many of the kinds with which he has been successful in the East, as well as other varieties particularly adapted to the Pacific Coast. He will still continue his interest in the establishment at East Bridgewater, although the business there will be in charge of H. C. Bacon, who has been with Mr. Alexander for several years, assisted by Mr. Alexander's son, Herbert.

Before Mr. Alexander left East Bridgewater he was surprised by his employes who gave him a farewell party, and presented him with a handsome leather traveling bag and trunk. Mr. Alexander has been suffering with rheumatism for several months, and it is expected that his health will improve in the western climate.

### NEWS NOTES

The Rosary Garden Shop, with a new store at 178 North Main St., Elmira, N. Y., has been featuring bulbs this year. The concern has also sold a great quantity of asters grown on a farm brought into conjunction with the store.

It is reported that 2,500,000 shrubs and trees have been shipped from Geneva, N. Y., this season, this being the largest fall shipment ever made from that city.

# DISCUSS ORCHIDS

## Gardeners' and Florists' Club of Boston Hold Interesting Meeting in Horticultural Hall

At the regular meeting of the Gardeners' and Florists' Club of Boston, held in Horticultural Hall, the evening of November 21, it was voted to hold a ladies' night in January and also to hold a banquet in some hotel in Boston in February.

The nomination of officers took place at this meeting. Mr. W. J. Kennedy nominated Harold Ryan, the Cambridge florist, for president. Mr. James Methven nominated Walter H. Golby for vice-president. Mr. A. K. Rogers nominated the present encumbent, Mr. James Methven, for treasurer. Mr. Kennedy nominated W. N. Craig for re-election as secretary. No other nominations being made for these offices, their election at the next meeting is assured. Nominations for executive committee to be voted for in January were as follows: Patrick W. Burke, William H. Judd, Irwin Stewart, George Butterworth, George W. Hamer, P. J. Van Baarda, Gustave Thommen, E. F. Norberg and Herbert Baxendale.

The meeting was then given over to a discussion of orchids, several well known speakers taking part. Mr. Donald McKenzie of Chestnut Hill read a short but interesting paper on Odontoglossums and Odontiodas. Mr. McKenzie emphasized the necessity of plenty of water and a cool house. He said that at his place in Chestnut Hill the Skinner system was used in summer to flow water over the glass. Mr. McKenzie also said that he used yellow peat in preference to any other kind, and that no feeding was done.

George W. Butterworth of Framingham then talked about Cymbidiums, largely from a commercial viewpoint. Mr. Butterworth exhibited a very large plant to show the way in which Cymbidiums were grown at the Butterworth place. He said that they were planted with an abundance of crock in the bottom of the pot. Then a layer of peat, then some bone meal, then a little peat dust. The plants were then set in place, not too deep but not as shallow as Cattleyas, after which the pots are filled with regular peat. He went on to say that up to 1900 comparatively few Cymbidiums were grown. The C. insigne was discovered and soon appeared in many variations, each of which was given a different name. Now the Insigne Cymbidiums are grown most largely for commercial purposes, although some other kinds, like Lowlianum and Tracyanum have commercial value and are grown at the Butterworth place. Cymbidiums of the insigne type, however, are the easiest sellers and the most satisfactory.

At Framingham the pots are set on

beds of coal ashes through which the roots extend. They are staged up a short distance and are grown in a rather shady house with an abundance of moisture. Speaking of coal ashes he said that Joseph Manda, the famous New Jersey grower, swears by them.

Mr. Butterworth said that these plants are readily propagated and flower in three or four years. At the Butterworth place they are tied up and not allowed to grow loosely in the old-fashioned way, as they take too much room. He spoke of the wonderful keeping qualities of the Cymbidium flowers, the blooms often lasting two or three months and keeping three or four weeks in water. Plants are timed so as to begin flowering in January and bloom until April. Potting is done when the plants start to make growth. They are kept syringed on hot days. Moisture at all times is of fundamental importance. The plants are kept clean by spraying with a nicotine and soap solution. Winter temperature runs between 45 and 50 degrees.

George Lydiard, of the Towle estate in Newton, discussed Dendrobiums in a very interesting manner, and gave some side lights on the culture of orchids in England. He said he was greatly surprised when coming to this country to find no rain water tanks at the orchid establishments. In England rain water is always depended upon for watering orchids. He admitted, though, that fairly good results were obtained in this country from tap water.

He said that Dendrobiums were easy to grow if given the right kind of care, especially the deciduous kinds. Water should be gradually withheld instead of being shut off abruptly, as is often done. Some water should be given until the foliage begins to turn yellow. Then they should be carried over in an airy house. When the bulbs are hard they can be hung up in a light house which is cool but where frost does not reach. When flowers start one good watering should be given, after which the plants should be put into a warm house and kept there until the flowers are almost ready to expand. Then they should go back to a cool house. When bulbs are three years old they should be cut out. Potting should be done immediately after flowering, using a liberal supply of sphagnum moss. The well known Dendrobium Phalaenopsis needs six weeks' rest in a warm house. Many growers make the mistake of moving these plants. They are best left in the house where they have flowered and with the same heat. They are easy to propagate by selecting bulbs not over three years old and cutting them into pieces four to six inches. They must be kept well sprayed and will make good plants in three years. These plants do not like too much sun, giving better results in partial shade during the growing season.

The speaker then went on to tell of some interesting experiments being made in England in the use of fungi in the seed flasks. He said that different fungi were being used for different varieties and that the period between propagation and blooming had been reduced by a year. He said also that by this method Cymbidium spikes four feet long have been grown.

At the close of Mr. Lydiard's talk Secretary Craig read an interesting paper written by George L'Anson, the well known Beverly Farms orchid expert, on East Indian Orchids other than Phaelanopsis.

Three new members were admitted at this meeting, Irving H. Stewart, Brush Hill Road, Readville, W. W. Gallagher, 44 Cottage St., West Lynn, and Elmer E. Butler, 949 High St., Dedham.

King
GREENHOUSES
THE SURE WAY TO BIGGER PROFIT

When a florist places his order for a King you can be sure that he, the hundreds of other King owners, is on the right track for bigger profit.

King greenhouses grow a larger percentage of firsts than other makes of houses and they cost less to operate. One grower tells us that his King greenhouses go a long way in producing the high grade stock he is selling now. Another florist says that the amount of coal used during a severe winter was less than we said it would be in an ordinary winter.

The quality of material and workmanship is the best and can be translated into one word—strength. A grower wrote us saying that in a severe sleet storm "We had considerable ice and snow on the houses but your construction stood the strain with no bad results whatever."

As for price and service read what this grower writes. "After comparing all propositions in regard to workmanship, service, details of construction and price we were firmly convinced that your proposition was by far the best we had received and so placed the order with you."

*When you think of good greenhouses, think of KING*

**Selling Nursery Stock**

New and somewhat revolutionary ideas are being advanced by some of the nurserymen concerning the sale of nursery stock. They believe that with new times there must come new methods. They are not satisfied merely to catalogue their stock, send out the catalogues and wait for orders to come in. That kind of selling will always bring a certain number of orders from people who realize the value of nursery stock and merely select the grower from whom it shall be procured.

There are, however, unnumbered thousands of other people who would buy nursery stock if the fact could be brought home to them that it would make their lives pleasanter and their homes more attractive. They would buy, too, if they were made to understand that the planting of nursery stock is not confined to the Spring months, but can be done at almost any time. This has been a wonderful Fall for planting evergreens. Nurserymen who have based a selling campaign on that fact have done a lot of business.

Many nurserymen are finding, however, that they are handicapped if they depend upon their own efforts alone. They are seeking new mediums by which to get their goods into the hands of the public. They are trying to show the florist first of all that his interests and those of the nurserymen are tied up much more closely than is commonly realized. They are trying to show him that he, the florist, ought to be a distributing agent for the nursery trade. They are proving to him that tubbed evergreens, window boxes and material of that sort is readily absorbed by the purchasing public if the goods are brought to their attention when they are in a buying mood, or, in other words, when it is attractively displayed in a well arranged store or along the street in front of the store. Florists in the past, nurserymen point out, have made a mistake in charging too much for their nursery stock. A fair price will bring increased business.

Mr. Theodore Borst, of Little Tree Farms, and E. G. Hill, of Dundee, Ill., are especially active in promoting this new line, and florists are responding to their efforts in all parts of the country. Probably so many tubbed evergreens were never seen around the florist shops as the present season. This should be only a beginning. A florist can sell garden accessories of all kinds the season through. There is no reason why they shouldn't also sell nursery stock. In fact, nursery stock seems much more appropriate to a florist shop than many of the things seen there.

Mr. Borst has gone still further and has devised the unique idea of selling evergreen stock along the roadside. He is now enlisting the co-operation of fruit growers who have roadside stands. A number of these fruit growers are displaying young evergreens at their stands and are selling them or taking orders from their customers. This may be a case of Mahomet going to the mountain, but it opens a new selling avenue, the possibilities of which are unbounded.

The public has never bought nursery stock of this character with the same freedom that they buy other goods for their pleasure and the adornment of their homes. Perhaps the nurserymen are in part to blame that this is true. In any event it is safe to say the next few years will see this condition corrected to a large extent. In fact, new selling methods are likely to be the outstanding feature of the nursery trade for some time to come.

## EDITORIAL NOTES

The coal companies are apparently doing their best to drive florists to the use of oil. Complaints about the quality of the coal being delivered this Fall are loud and vigorous. Many of the florists say they are planning to change over to oil, not so much as a matter of economy or convenience as because the coal which they receive is so low in heat value and so high in the proportion of clinkers and stones.

The increased interest in matters which have to do with flowers is readily noted by the colleges. A report that comes from the Rhode Island State College shows that there is an increase this year of 30 per cent in the botany department enrollment. This college is now in a particularly flourishing condition, with new laboratories having the latest equipment in electric drying ovens and compound microscopes.

It may be just as well for florists not to bear down too hard on laurel in their Christmas decorations, using other evergreen material instead. The women's clubs and other organizations are very active in their campaign for the conservation of laurel, and may discriminate against florists who use it over freely.

It is pleasant to find that the florists are taking an important part in the activities of the Rotary Clubs throughout the country. In the last issue we spoke of the Rotary Club of Nashua, N. H., meeting at the Buxton Greenhouses. A similar event was recently held in Washington, at the greenhouses of William F. Gude, where luncheon was served. A pleasant feature of the program was the rendition of a dialect recitation by Mr. Gude's talented daughter, Wilhelmina. The greater the extent to which the florists can mingle with representatives of other business, the greater will be the good derived by the trade.

# GRAFTED ROSES

It may seem early to talk roses for next spring, but we have been booking a lot of spring orders and you, who may be wanting a big lot early, may feel disappointed if we are not able to give you what you want when you want it.

Take up the question of spring requirements early!

**A. N. PIERSON, Inc., Cromwell, Connecticut**

## FLOWER SHOW AT AMHERST, MASS.

At the recent Autumn Flower Show conducted by the Department of Floriculture of the Massachusetts Agricultural College at Amherst, Mass., the Skinner cup competition for the best blooms of one variety of chrysanthemums was won by Mr. C. H. Sinclair, of Holyoke, for the third time. His winning variety was Louise Pockett. Butler & Ullman, of Northampton, florists, were second.

S. Church Hubbard, foreman of the college greenhouses, won all five sections of the class of six sprays and divided with G. H. Sinclair the honors in vases of three specimens. Sinclair won without competition the first honors in exhibit of large flowered chrysanthemums arranged for effect. Butler & Ullman of Northampton won in both classes on plants, with single bush specimens and three bushes.

## FLORISTS AT READING SHOW

At the Chrysanthemum Show recently held in Reading, Pa., the E. G. Hill Co., of Richmond, Ind., made a fine display of roses, including America and Crusader. Mrs. Isaac Hiester had a remarkable exhibit staged by Alfred Lunden, her superintendent. A novelty was a flower of Francisca brought from Germany in 1905. Giles, the Florist, the Farr Nurseries, Elmer D. Smith, the chrysanthemum grower of Adrian, Mich., Charles H. Totty of Madison, N. J., A. N. Pierson of Cromwell, Ct., and Zook's Greenhouses, Elizabethtown, Pa., were among the exhibitors.

A. C. Bird has resigned his position with Dean, the Florist, at Waterbury, Ct., and is now in the employ of the Squires Flower Shop.

## H. H. BARROWS DEAD

### The Passing of the Veteran Fern Grower of Whitman, Mass., a Serious Loss to the Trade

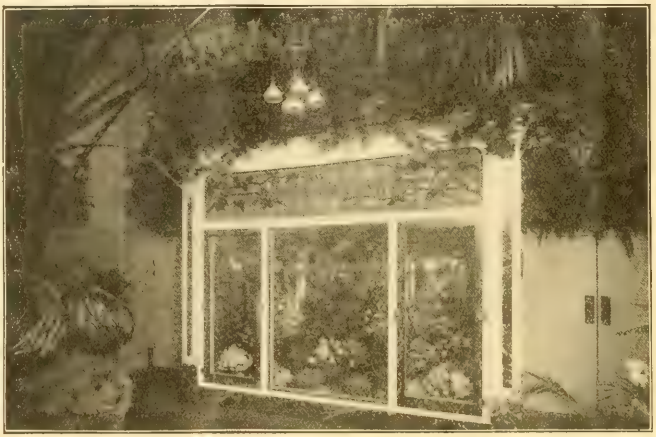
Henry H. Barrows, one of the best known fern growers in America, died at the Brockton Hospital, Wednesday,

The Late H. H. Barrows

November 15, after a short illness. Mr. Barrows was 66 years old.

The news of Mr. Barrow's passing has been received with the deepest regret by the trade everywhere. He was an exceedingly likable man, although too deeply engrossed in his business to spend much time in visiting his fellow florists or in attending social functions. At the same itme he has been for years a genial host to hundreds of florists who have visited his extensive range of greenhouses in Whitman, a range which is given over exclusively to ferns and where an enormous stock of the best commercial varieties is to be found.

Although Mr. Barrows settled in Whitman about 40 years ago he was a native of West Sumner, Me. When a young man Mr. Barrows went to work for his uncle, H. H. Robbins, for whom he was named. Later he went into business for himself. At one time he owned three stores, one in Lynn, one in Rockland, and one in Whitman. Then he began to specialize in ferns and for many years has given his while time to them, developing what came to be the largest range of greenhouses devoted exclusively to ferns in the country.



He is survived by a mother, Mrs. B. P. Barrows, 90 years old, who lives with a daughter, Mrs. William Vining, in Abington, a widow and four children, a sister and brother.

Mr. Barrows came of old Pilgrim stock, and had the virtues of strict honesty, high-mindedness and industry which enabled his forefathers to help in making New England what it is today.

## A HOVEY STORE AGAIN

The name of Hovey & Co., Seed Merchants, has again taken its place in the trade. Some time ago the Hovey concern, long a factor in the Boston seed trade, was purchased by Carter's Tested Seeds. Now David G. Reid and Norman Howden, who have been connected with the Carter Company, have purchased the Hovey interests and resumed the old name, with headquarters at 19 and 20 So. Market Street.

The brothers, William and Fred Hanselman, have erected a new greenhouse on property recently acquired by them in Hoosick Falls, N. Y., and are making other improvements.

## BRECK'S NEW PLAN

### 500 Hardware Establishments Become "Breck's Stores"

A plan new to the seed trade is being carried out by Joseph Breck & Sons. About 500 hardware stores selling seeds and implements and covering all parts of New England have been made authorized representatives of the concern. These stores are known by black and orange signs in the windows which read,

*A* **BRECK'S** *Store*

Then the service is made complete by means of the firm's new catalogue which will contain a list of all these stores, arranged alphabetically according to towns. Each representative store will send in a list of customers' names which will be printed on gummed wrappers. These wrappers, with the names and addresses on each, will be affixed to a catalogue, and these catalogues with the list returned to the representative store, which will put the catalogues into the mail.

These catalogues will contain a message to all customers, who will be told that while as always in the past they will be welcomed at the headquarters of the Breck Co. in Boston, yet they are urged when possible to trade at the local store, which will give them the same service and which will obtain for them at the same price any article listed in the catalogue if it is not kept in stock. It will be explained that, owing to the great rush of customers at certain seasons, it is exceedingly difficult to give the proper attention to each customer in the store in Boston, and that the arrangements with the local stores have been made for their convenience and comfort.

The Breck Co. will have another innovation this year in the way its catalogues are put out. The usual large catalogue, listing all the seeds, bulbs, nursery stock and implements carried by the concern, will be issued, but will be supplemented by a much smaller and therefore more convenient catalogue containing such items as are most likely to be needed by the average amateur. It is believed that this smaller catalogue will be warmly welcomed.

George H. Harrison, of Berlin, Md., a member of the well known Harrison Nurseries, died recently. For more than 35 years he had been associated with his brother, Senator Orlando Harrison, in the nursery business.

## WILL GROW GLADIOLI

Robert Hutcheon, the greenhouse man of Stoughton, Mass., who has been growing gladioli in a modest way for some time, has decided to take up operations on a much larger scale. For that purpose he has bought a 13-acre farm in Abington, to which place he will transfer his business. He expects to devote himself pretty closely to gladiolus in the future, and to grow both flowers and bulbs on a large scale. His sons will continue the greenhouse.

## NEWS NOTES

At the recent flower show of the Pennsylvania Horticultural Society a new mauve colored chrysanthemum was named by its owner, W. H. Ritter of 5424 Baltimore Ave., for Gifford Pinchot, governor-elect. An unusual exhibit at the show was a hanging basket made from Eucalyptus pods and beads by a convict in the Eastern Penitentiary.

Frank O. Anderson, formerly on the Hayward estate at Franklin, Mass., has become outside foreman on the R. M. Clarke estate at Pomfret Centre, Conn.

C. G. James & Son, owners of the Wellsville Rose Gardens at Wellsville, N. Y., have opened a flower store in the Barnes Building. Mr. H. S. James is in charge.

### NEWS NOTES

Recently the Park Commission at Paterson, N. J., distributed flowers from East Side Park to the public without charge rather than let them simply die on the ground, but the plan proved so unsatisfactory that it will not be repeated. Much damage was done, the public apparently accepting the invitation to help themselves without restrictions, the result being that dozens of plants were pulled out by the roots.

The Bridgeton, N. J., Dahlia Society has elected officers as follows: President, Bart Gumpert; Vice President, Merritt L. Sooy; Secretary, Ralph Pollock; Treasurer, Paul Springer. The board of directors selected are Bart Gumpert, Merritt L. Sooy, Ralph Pollock, Paul Springer, Claude Alkire, Casper G. Ware, Bert Bacon, Ward Loder, Lewis Heller.

Some very interesting photographs have been sent out by Charles Henry Fox, the Philadelphia florist, showing the location of his new store at the corner of Broad and Chestnut Sts. Mr. Fox writes, "It is going to be a real man's flower shop, almost on top of City Hall, and in the midst of everything, catering especially to men."

The J. J. Fallon Co., of Raleigh, N. C., recently staged a very attractive Chrysanthemum Show in the Yarborough Building.

### NEW ENGLAND NOTES

Carl J. Norton, of Butler & Uhlman, Northampton, was one of the judges of the Fall Flower Show held at the Massachusetts Agricultural College.

George A. Leighton, and Mrs. Leighton, of Yarmouth, Me., recently celebrated their fiftieth wedding anniversary. Mr. Leighton is a well known florist.

Donald White, of Wakefield, and Walter Johnson, of Stoneham, Mass., have erected a greenhouse 200x42 feet, in Wakefield, for the growing of carnations. This is a new firm and will handle carnations exclusively, shipping to Boston. They already have nearly 10,000 plants in the house, including eight varieties.

### CHANGES AT STAMFORD

The Quality Seed Store in Stamford, Ct., formerly owned by George B. Cannon, has been purchased by Frank Bauman and John I. Sipp, who will conduct the business under the name of the Stamford Seed and Flower Co. The store is to be entirely renovated and a large stock put in for the spring trade. In addition to its seed business the concern will conduct a cut flower department, with an expert designer in charge. There will also be a complete florist supply department. The new concern bids fair to take a prominent place in the seed and flower business of Connecticut.

## IRIS AND PEONIES

Having a large stock of the following Iris will quote special prices for early delivery as I wish to clear the ground: **Arnols, Brooklyn, Darius, Dr. Bernice, Exquisite, Gypsy Queen, Halfdan, Helge, Ingeborg, Jacqueminot, Liabaud, Lord Salisbury, Mme. Chereau, Mithras, Mrs. H. Darwin, Nibelungen, Princess of Teck, Queen of May, Rhein Nixe, Rose Unique, Shakespeare, Sherwin Wright, Walhalla, Walneriana, Ven Geerti, Hector.**

Ask for price list and see what my customers say about the service they receive. Thank you.

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

# S. A. F. & O. H. Department

The Campaign Fund is moving slowly up to the $40,000 mark, considerably below the point the Publicity Committee had hoped it would reach. Some very good advertising has been planned for December, a good deal of which will appear in the magazines for that month now about on sale. Judging from the reports from different markets, the florist industry is greatly in need of stimulus, a stimulus which can only come from publicity work of this kind. Were the Committee in a position to expend $100,000 within the next two or three months, it would not be a penny too much—and when the extent of our industry is considered, it would not be more than might reasonably have been expected.

When it is considered that there are about 20,000 or more florists in the country, all to be benefited by the campaign, it does seem that thousands of otherwise astute business men are not alive to their opportunity to give their businesses a good boost

## George Watson's Corner

"You in your small corner and me in mine."

They seem to be all very much obsessed getting ready for Thanksgiving at this writing. Then right on the heels of that comes Christmas. It will be a busy few weeks from now on among the boys who attend to the great American demand for cut flowers and greens.

Cincinnati Dan blew in this week on his annual tour on behalf of the J. M. McCullough Sons Co. He looks well and hearty and reports business unusually good all along the line.

Dennis Connor of the Lord & Burnham Co. thinks prices are governed by the law of supply and demand. The writer had the same old-fashioned notion unil he ran up against the philosophy of Al Jones. The Jones' idea is if you have a few thousand too many bales in the cellar, and no demand, put the price up, and they'll come a running. And he gives instances to prove the contention. Tom Hogan, in a different line of business, bears him out and gives instances. Then along comes John Welsh Young with a story of how Frank Ross moved the market on roses down to his level, while the supply remained the same and prices were going up, if anything. Al Jones, on being questioned on the matter, says that that was pure bluff on Ross's part. It looks, therefore ,as if a third element would have to be added to the law of supply and demand. "Bluff." The best bluffer wins. It's an interesting question, and we have only scratched the surface, so far.

Away back some thirty-five years ago Bill Harris and Bob Craig and a lot more of the flower growers, discovered the great secret—that the way to regulate prices was to get together and agree on a price. Which was done. They all solemnly subscribed to the price and stuck to it. But, by the time the season was over, half of them were sold out clean, while the other half had only sold a few. The explanation was: They all stuck to the price; but some of them gave 13 and some 15 to the dozen. Wow! The organization busted up, there and then.

Robert has got all his bad teeth out now, and the new ones fit fine. He seems to stand the dentist pretty well. He was quoting a fine piece from Swinburne, when he called. When yours truly goes to see the den-

tist, it's nothing but cuss words for quite a while. So that's where he and the writer are different. However, we both admire Swinburne and here's one that applies to Robert from the aforesaid Algernon which all Robert's friends will appreciate:

"Where dead ages hide under
The live roots of the tree
In my darkness the thunder
Makes utterance of me
In the clash of my boughs with each other you hear the waves sound of the sea."

And so in Bob then, the truth is: the blooms in his boughs. That may mean young boys and girls or thousands of other good things, including Porto Rico dash in the seas.

---

Williams F. Gude, of Washington, D. C., and his son, blew through recently and were taken good care of by Ed Fancourt and the boys in their trips to Norwood and other outskirt points. Bill looks good. Keen and clear of eye; but I do wish he'd let his whiskers grow again. Then he'd look more natural!

---

Robert Craig expects to sail for Porto Rico mid-December. Wants all the boys to join him down there, and get rid of their asthma. Just address your letter to San Juan, Porto Rico. He says they all know him down there. I wonder if he includes the policemen in that!

---

Paul Huebner left for St. Petersburg, Florida, for a short holiday, November 9th. If he don't like it there, he will take an aeroplane across to see Robert Craig at San Juan. What's a thousand miles when these machines can do two fifty an hour.

---

Our good friend, Wallace Pierson, I see, got in by 166 out of 7000. And they are not asking for a recount, like they are on Henry Cabot. So you will all have to take your hats off to Wally now—and say "delighted to meet you, senator!"

---

The Commodore is back from Barnegat and settled down for the winter at Ridge and Lehigh. He looks fine. Full of snap, and can get away with a better lunch at "the kirk" than yours truly—thirty-three years his junior.

Manufactured by the JOHN C. MEYER THREAD CO., LOWELL, MASS., U. S. A.

### FRANCIS J. TIGHE

The many friends of Francis J. (Bud) Tighe, well known and popular greenhouse salesman, will greatly regret his sudden death. Mr. Tighe had always enjoyed the best of health but on the day of his death he stated that he was not feeling well. While enroute to call on two or three florists, he stopped at a doctor's office for diagnosis of his illness and while there succumbed to an attack of acute indigestion.

Mr. Tighe, who was thirty years old, was born in Buffalo and since his graduation from Canisius High School in 1912 had been connected with the King Construction Company, first as manager of the New England territory and later as manager of the western New York, western Pennsylvania and Ohio territory.

During the World War, Mr. Tighe saw service in France with the Thirteenth Regiment, U. S Marine Corps. He was a member of the Semper Fidelis Club of the Marine Corps and the Buffalo Floral Club.

The King Construction Co. is putting up a new house, 100x30 feet, for Attilio Conti at Clinton, Mass. This is a steel frame house in which Mr. Conti expects to grow lilies and roses. In the spring he is to tear down three wooden houses which he now has and replace them with steel frame structures.

WILSON'S

# O. K. Plant Spray

Kills Plant Insects, Scale and Mildew

Used by Leading Gardeners

Bbls. $90, ½ bbls. $50, 10 gals. $20,
5 gals. $10

"Florham," Convent, N. J., January 4, 1922.

Andrew Wilson, Inc.,
Springfield, N. J.

Dear Sirs:

We have used Wilson's O. K. Plant Spray on specimen bay trees for scale, and trained native cedar trees for red spider, also under glass for scale and mealy bug on nectarine trees and grape vines during their dormant state and have found it both safe and effective in every instance.

Yours truly,
R. E. TYSON.
Supt. for Mrs. H. McK. Twombly.

# THOMAS CHRISTENSEN

## The Go-Getter

## of Short Hills, N. J.

Last year Peter B. Kyne wrote a bully tale called "The Go-Getter." It was so full of get-thereness that one concern I know of, bought a thousand copies of the book, and gave one to each employe.

The Go-Getter was a chap who, in spite of the greatest bunch of hard luck hold ups, did what he started out to do.

Did it without getting all puffed up about it either.

Those of you who know Christensen, know he has pulled things off in spite of election and high water.

He's another one of those men, like Finck of Bound Brook, who is so busy tending to his own business that he doesn't have any time to give any attention to anybody else's.

No one grows any better ferns.

And as for pot plants, that range of narrow houses certainly does turn out top notch stock.

If you are debating whether to build one wide, or several narrow houses, let's talk it over together. It's more than likely we can give you some worth while help hints.

Hitchings and Company

5-inch pots, dozen ..... 9.00
6-inch pots, dozen ..... 12.00

**ARDISIA CRENULATA**

5-inch pots, each ..... $1.75 and $2.00

## CYCLAMEN

This has been one of our specialties for over 20 years. In all our experience we have never seen a finer lot of plants. We are growing our stock in new houses. They are absolutely clean and perfect in every way and not to be compared with weakly, drawn stock offered at less money. We confidently feel that our four large houses, containing 25,000 plants, will not be enough. They have been pronounced by plant experts from all over the country as the finest stock ever grown.

5-inch pots, heavy, doz., $15.00 and $18.00
6-inch pots, very heavy, dozen $24.00, $30.00, $36.00 and 42.00
7-inch pots, very heavy, each $4.00 and 5.00
8-inch pots, very heavy, each $5.00, $6.00 and 7.50

**GARDENIA VEITCHII**

We have an exceptionally fine stock for growing on for Winter and Easter flowering. Heavy plants are offered.
2¼-inch pots, per 100, $15.00; per 1,000 ..... $140.00
3-inch pots, per 100 ..... 35.00
6-inch pots, in bud and flower, each $2.50, $3.00 and 3.50

## CROTONS

The Croton, with its highly colored foliage, is indispensable during Fall and Winter. We have the largest and most complete collection of Crotons in the world, carrying at the present time for Fall sales over 50,000 in 200 varieties, all of the very highest quality and brilliantly colored.

**Strong Plants—Immediate Delivery**

4-inch pots, dozen, $10.00; per 100....$75.00
5-inch pots, dozen ..... 15.00
6-inch pots, dozen ..... $18.00 and 24.00
7- and 8-inch pots, each, $4.00, $5.00, 6.00
10-inch pots, each ..... $7.50 and 10.00
12- and 14-inch pots, specimen plants each ..... $15.00, $20.00, 25.00

## DRACAENAS

There is no variety of foliage plant so attractive as the highly colored Dracaena. The small and medium sizes can be used to great advantage in making up the popular Christmas baskets, while the large specimens have always been in great demand for decorative purposes. We are now growing more Dracaenas, in greater variety, than any firm in the country.

**DRACAENA GODSEFFIANA**

Green and white leaf, very hardy, fine for baskets.
2½ inch pots, per 100 ..... $20.00
3 inch pots, per 100 ..... 35.00
4-inch pots, per 100 ..... 60.00

**FANCY DRACAENAS**

We are offering a collection of the new and rare Dracaenas. Very handsome for home decoration or for fancy combination baskets.
4-inch pots, dozen ..... $9.00
5-inch pots, dozen ..... 15.00
6-inch pots, dozen ..... $18.00 and 24.00
7- and 8-inch pots, each ..... $3.50 and 5.00

## 150,000 NEPHROLEPIS

**(In variety)**

We are the largest growers of Nephrolepis Ferns in the country. In fact, we are headquarters for them.

**NEPHROLEPIS VERONA**

Makes a good plant in all sizes. Much finer frond that any crested sort outside of N. Smithii. The fronds are carried on a heavy, wiry stem. We consider it one of the best of the newer introductions.
2¼-inch pots, per 100, $10.00; per 1,000 ..... $90.00
4-inch pots, dozen, $5.00; per 100.... 40.00
6-inch pots, dozen, $12.00; per 100.... 90.00

**NEPHROLEPIS ELEGANTISSIMA COMPACTA**

A dwarf, compact form of Nephrolepis Elegantissima, each plant making an ideal shape.
2¼-inch pots, per 100, $10.00; per 1,000 ..... $90.00
4-inch pots, dozen, $5.00; per 100.... 40.00
6-inch pots, dozen, $12.00; per 100.... 90.00

**NEPHROLEPIS NORWOOD**

The most beautiful form of Nephrolepis to date; graceful, compact and symmetrical, a vigorous, healthy grower. All growers are invited to inspect it at our Norwood Station greenhouses. Strong plants are offered:
2¼-inch pots, dozen, $3.00; per 100, $12.00; per 1,000 ..... $100.00
4-inch pots, dozen, $6.00; per 100.... 45.00
6-inch pots, dozen ..... 12.00
Orders filled strictly in rotation.

## PALMS

**ARECA LUTESCENS**

Perfect plants with rich, dark green foliage. Our stock is grown cool and hard. It is in splendid condition and will surely give satisfaction. Large sizes are very scarce this year. We have the largest stock in all sizes in the country.
7-inch pots, made up, each, $5.00 and $6.00
8-inch pots, made up, each ..... 10.00
10-inch pots, made up, 5½ to 6 feet tall, each ..... $12.50 and 15.00
13-inch tubs, each ..... 25.00

**PHOENIX ROEBELENII**

Very scarce. Fine for growing on.
4-inch pots, dozen ..... $15.00
6-inch pots, dozen ..... 24.00

**COMBINATION BASKETS**

Fancy baskets filled with the brightest colored foliage, Dracaenas, Crotons, Pandanus, Arecas, Ferns, etc. Sure Christmas sellers. $5.00, $6.00, $7.50 and $10.00 each.

**ADIANTUM LEMKESII Improved Gloriosa**

4-inch pots, dozen, $10.00; per 100 ..$75.00

**FICUS REPENS (trailing)**

Excellent plant for combination baskets.
2½ inch pots, per 100 ..... $15.00
4-inch pots, heavy, long vines, dozen, $6.00; per 100 ..... 45.00

**ENGLISH IVIES**

Small leaf variety. Excellent for made up baskets or trellis work.
4-inch pots, 3 plants, per 100 .....$30.00

**PANDANUS VEITCHII**

Well colored plants.
4-inch pots, dozen, $12.00; per 100 .. $90.00
5½-inch pots, dozen ..... 18.00
6-inch pots, dozen ..... $24.00 and 30.00
7-inch pots, each ..... 4.00
8-inch pots, each ..... 5.00

***"Commercial Floriculture"***

Is the best book for practical florists ever written.

It gives the fruits of 50 years' experience and is written by one of the best known growers in the country.

It tells you what you want to know
About every plant you grow.

It is full of helpful pictures illustrating good plants and good plant houses. It is equally valuable for the beginner or the old-timer.

## F. T. D. MEETINGS

Mr. J. F. Ammann, field manager of the F. T. D., is on the move most of the time. Meetings have recently been held in Wichita, Kans, Terre Haute, Ind., and Decatur, Ill., for organizing district units. There will be a lull until after the holidays no doubt. Then there will be a long succession of meetings, beginning with one at Cincinnati, Ohio, on January 31. Mr. Ammann's itinerary from then on will be Pittsburgh, Harrisburg, Reading, Scranton, Baltimore, Philadelphia, New York, Hartford, Providence, Boston, Worcester, Albany, Syracuse, Toronto, Buffalo, Erie, Cleveland, Toledo and Detroit.

## HEAVY ORCHID LOSS

**Disastrous Fire at the Greenhouses of George E. Baldwin & Co.**

Fire a few days ago destroyed five buildings and damaged seven others at the greenhouse plant of George E. Baldwin & Co., in Mamaroneck, N. Y., doing damage which has been estimated roughly at $50,000. Many valuable plants that were taken out of the houses to escape the fire were later ruined by the cold. The flames were first discovered in the potting sheds and soon spread to the adjoining greenhouses and the shipping house. The damage was particularly heavy in the seedling house, where a great many young plants were being grown. Mr. Baldwin is one of the best known orchid growers in the country, and has received many expressions of regret from members of the trade at his loss.

## JAMAICA FLORAL CO.

The Jamaica Floral Co., which recently moved to a new location at 750A Center St., Jamaica Plain, now has a large and well appointed store. When the decorations have been completed all the inside woodwork will be white. The ice chest has been set flush into the rear wall of the store where it looks particularly well. Morris Rosen, the proprietor, has now been in business for 28 years, and is widely known. Mr. Rosen has the reputation of being a particularly good salesman, with a natural understanding of how to handle customers. He has been fortunate in keeping the same telephone number, Jamaica 398, that he had in the old store.

Members of the trade everywhere are filled with great regret at the passing of Eugene J. G. Dailledouze, of Brooklyn, N. Y. Mr. Dailledouze was a famous grower and was for many years associated with the New York Cut Flower Co. He was especially interested in carnations and roses, and was a member of many societies.

**"The Laws of Hybridizing"**

**DISCOVERED BY RICHARD DIENER**

A discovery of tremendous importance to everyone interested in plant-breeding and plant life. Any form and size of flowers, fruits and grains can be obtained by application of these laws in the quickest possible way. They are the first workable laws ever discovered in plant and animal-breeding. Included is an explanation of What Plant Life is; Animal Life in Relation to Plant Life; What Plant Sports Are, and other valuable information. A pamphlet of sixteen pages, elegantly printed and illustrated.

# -HORTICULTURE-

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 189[illegible]

Vol. XXXVI DECEMBER 10, 1922 No. 11

## THE TALK OF THE TRADE

This season has been an unusual one for the 'mum market. The early 'mums were late, running very close to the mid-season, and mid-season 'mums seem to have traveled fairly true to form, but the late 'mums for some unaccountable reason came in early with the result that there was a heavy over-supply during the mid-season with a short crop and high prices at Thanksgiving.

I saw Bonnaffon in a number of places being cut as early as October 15 and many places were cleaned out by the 10th of November. Here and there I find a grower who has made a study of selecting Bonnaffon, and has some that come in early for him through selection ,and some which come in very late. Edward J. Taylor, of Greens Farms, Conn., for instance, has later Bonnaffon than the average, and I believe he profited by it this year.

---

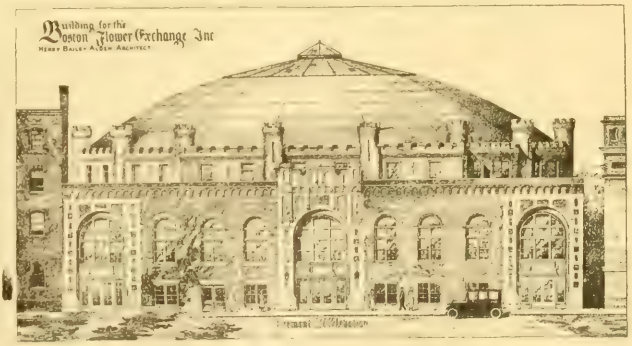
It is doubtful if there has ever been a season, with the exception of the influenza year, when carnations have averaged right through a higher price than this season. The cut has been certainly up to average in quantity and not by any means below average in quality. In fact, I think there are as fine carnations around at this season as we have ever seen, but with all the good supply the price has held up will.

---

W. T. Walke of Salem, Mass., has again shown himself a past master in the art of growing poinsettias. This plant on the average is not so well finished this year as it has been some previous years, probably due to the unusual weather conditions through this fall, but I think Mr. Walke has his stock as good as anyone can have it. You can always be sure of finding one crop at least in fine shape when you call at his place at this time of the year, and it is worth going out to see.

Gibbs Brothers, of Lynn, Mass., have a house of Melior begonia in excellent shape. They appear to me to be finished just about perfect for Christmas sales, and there will be no doubt about that house being cleaned out, and at the full market price.

---



In view of the interest being shown by florists in evergreens, I was much pleased with a group seen at the Park Street store of Thos. F. Galvin, Inc., a few days ago. The big round window which is the most decorative feature of this store had been completely filled with specimens of young junipers, arranged in circles according to height, with a splendid specimen of the Polish juniper in the center. The other specimens were Hibernica and the Swedish juniper. The display was one which attracted no little attention, and has resulted, I understand, in numerous sales, the decorative value of these young evergreens being called to the attention of many people for the first time.

Besides the junipers shown in the windows, the boxes in front of the store were filled with specimens of Juniperus spicata, a dwarf species which is unusually hardy and therefore one of the best to use in outside boxes, keeping in good condition throughout the winter. I understand that these evergreens came from the Framingham Nurseries, of which Richard Wyman is the genial and enterprising proprietor.

I understand also that the Galvin Co. has been making large use of small evergreens for the past two years, both in their decorative work and in their selling. There is no doubt of the fact that there is a bright future along this line, and that nurserymen and florists alike are to benefit by the growing popularity of evergreen trees in tubs and boxes.

---

On a recent call at the Hall & Robinson store in Montreal I was much pleased to meet Mr. George D. Reid. Mr. Reid, as will be remembered by many florists in the States, was formerly with E. Weinhoeber & Co. of Chicago. While in the Windy City he made a great many friends, some of whom are always dropping in upon him at his new place of business. Mr. Reid has bought out the Hall & Robinson store on St. Catherine street, and has made it a very up-to-date establishment, where he is doing a flourishing business. Needless to say, callers from across the line are always welcome.

Architects' Sketch of the New Boston Flower Market

It is seldom that a good grower of cyclamens has any surplus plants left at the end of the holiday season. The demand is growing greater every year and first class plants bring a premium. A week or two ago the Wollrath Brothers of Waltham, near Boston, had disposed of 11,000 plants, with the balance of their stock practically spoken for. These boys are very much alive and always willing to fill an order, even though it entails considerable extra effort on their part. Not long ago one of them drove his truck 331 miles to Saranac Lake in New York State, to make a delivery to P. H. Ryan, wwho wanted a big lot of cyclamens and begonias in a hurry, and wanted them from the the Wollraths because he knew the quality of their goods. It was only four degrees above zero when Saranac Lake was reached, with two inches of snow on the ground. Nevertheless, Mr. Wollrath says he enjoyed the trip in spite of the fast time he had to make.

Speaking of the willingness on the part of a florist to go out of his way to please his customers, I am reminded of the unusual position taken by Thomas F. Galvin, Jr., of Boston. Mr. Galvin, who is developing a unique line of trade at his store in Winthrop Square, advertises that he is ready to fill orders at any time, night or day, Sundays and holidays included. Now, there are many florists who refuse to fill orders after they have closed their stores, and mighty few who are willing, like Mr. Galvin, to get up at 3 o'clock in the morning if necessary, go down to the store and make up a funeral piece for immediate delivery. Mr. Galvin did just that thing a few days ago and thereby won the lasting gratitude of at least one customer.

Mr. Galvin says the telephone is always jangling at his home, but that he never fails in doing his best to meet a customer's wants, even though he has to leave the easy chair in front of the open fire on a blustering winter night to do so.

Doubtless there are florists in plenty who will say that Mr. Galvin is foolish to coddle his customers in this way, but, after all, when a young man starts out to build up a business of his own, there's nothing like service to help him win out.

I have seen many windows which were a great credit to the florists who decorated them, but never a pair of windows which, all things considered, have equalled those in the Lane store at Hartford, Ct., on the occasion of the Harvard-Yale football game. There was no straining for effects, and no unnecessary lavishness, but the quiet charm of the window was seen in the exclamations of surprise and delight on the part of passersby. One window, of course, was given over to Harvard, with Harvard chrysanthemums of immense size as the crowning feature. The other window was blue, in honor of Yale, and adorned mostly with violets and white mums. As a matter of fact, all the leading florists in Hartford outdid themselves on this occasion. Spear & McManus, Coombs and Mackay had windows which I viewed with special pleasure. Doubtless, too, there were other florists whose places I missed.

The Hartford dealers are fortunate in having a clientele which will buy flowers of the highest grade, and also in having a source of supply in the A. N. Pierson establishment at Cromwell, where they can find some of the finest chrysanthemum blooms grown in America. As a matter of fact, I have seldom seen even in a show Chrysanthemums which, for size, texture and hardness, equalled those from the Cromwell greenhouses.

Barrow, the Florist, of Meriden, Ct., uses the want columns in the local newspapers from time to time. This is a plan which florists as a rule have not tried out, but Mr. Barrow reports that it works well, especially for selling bulbs and stock of that character.

The merits of the new rose, Commonwealth, seem to have been definitely established. They have made good wherever they are grown, and are now being pushed hard by A. N. Pierson, Inc., of Cromwell, Ct., which is sending out some exceedingly attractive circulars showing two different views of the rose itself. Commonwealth is a seedling raised by the Montgomery Company, of Hadley, Mass., with Ophelia and a Montgomery seedling as its parents. Its color is best described as deep pink, but it is several shades darker than Premier, and with a livelier color. It breaks freely from the bottom, and from the hard wood, and makes strong, vigorous plants, with foliage not easily affected by mildew or spot. It is well for growers to bear in mind that the wood is somewhat harder than that of many commercial roses, and that a few extra degrees of temperature will be required during the short days of winter.

The Pierson people say that while Commonwealth is good in winter, it is the best rose they have ever grown in summer. Fifteen thousand plants have been set out at Cromwell, 15,000 at Hadley, in addition to which a large number of plants have been distribu ted among growers throughout the country, who have been requested to give an honest and unbiased verdict. So far as reports have come to us at the present time, this verdict will be decidedly to the advantage of the rose.

## ALLIANCE DISBANDS

### Florists' Co-operative Organization In Boston Ends Its Career

The New England Florists' Alliance, composed mostly of florists in and around Boston, has disbanded. This action was taken at a well attended meeting held at the Parker House last Thursday night, with President Charles Boyle in the chair. After canvassing the whole situation it was decided that the support given the Alliance did not warrant its continuance. While about 85 contributors were signed up at the beginning, a large percentage withdrew in the first two months, and it has been difficult to collect from some of the others.

The New England Florists' Alliance was formed about a year ago, after a meeting in which Fred Asmus of Chicago and J. F. Ammann were present. Eugene J. Naukam, of Buffalo, was secured as the first secretary, but left early in the summer to accept a better position. Maj. Moyse has been acting as secretary since that time, giving what attention he could to the work in addition to his duties as a member of the State Legislature, to which he has just been re-elected for a two year term.

## GORNEY IMPROVEMENTS

Houghton-Gorney have just installed an Audriffen refrigerating apparatus which is working very nicely. Mr. Gorney says that he gave six months to an investigation of the different systems and finally selected this as the best adapted to his needs. It is economical to operate and is practically noiseless, and keeps his chest at the desired temperature with a few hours' operation in the morning and afternoon. It is not run at all at night, but the chest is plenty cool enough when morning comes. Mr. Gorney has also installed a Burroughs Bookkeeping Machine, which is a remarkably ingenious device and makes for absolute accuracy in the keeping of the firm's books.

# MARKET MATTERS EXPLAINED

## Important Meeting of the Growers Association Held in Boston—Pierson and Henshaw Guests

Many important matters in relation to the operation of the new market-house in Boston were explained at a largely attended meeting of the Growers' Association held at the Parker House last Thursday night, and preceded by a dinner at which Mr. Wallace Pierson and Mr. A. M. Henshaw of New York were guests.

President Sam Goddard was in the chair and called upon Mr. E. C. Stickel, and Allan Peirce to explain the arrangement of the new florists' market in the old Cyclorama Building on Tremont St., now being remodeled, and the methods by which the market is to be handled. Pictures were passed around showing the building as it will look when the work of reconstruction has been completed.

Mr. Stickel said that the plan of the committee was a progressive one, allowing for the addition of another story on the front of the building and the erection of a new building on the Warren Ave. side which would yield a floor area totaling 29,000 feet.

He said that the floors of the building were remarkably substantial, being made of reinforced concrete, with vitrified brick set on end on top. This floor is absolutely sanitary and of course waterproof. It would cost a fortune to build such a floor today, the bricks alone being worth five cents apiece. The ventilation, he explained, is accomplished by 40 adjustable windows along the top of the building. The main room is now square, and is lighted remarkably well by a huge skylight of reinforced glass, which will practically do away with the use of electric lights.

### Loading Facilities

On the Warren Ave. side there will be parking space and in addition a long platform, with a ramp leading to double doors in the marketplace. By this means boxes can be loaded and unloaded quickly and with a minimum amount of handling. There will also be an abundance of parking space on Montgomery Square and in adjoining streets. A large hallway in one corner of the building has just been discovered, which will serve admirably for a restaurant if one is decided upon.

Mr. Stickel said that it was hoped that $25,000 more would be subscribed, and the subscriptions have been left open until January 15, the purpose being to allow any grower who is interested to become a shareholder. It is preferred to raise the money in this way rather than to borrow it, as the investment is bound to pay well. The rental of the basement to the Henry M. Robinson Co. as well as that of booths and stalls will bring in a handsome revenue. In answer to a question Mr. Stickel said that the stockholders would be confined exclusively to growers.

### Rent of Stalls

Mr. Peirce said that the stalls in the new market would contain 16 square feet, being larger than those in the present market. There will be some large stalls for which higher rent will be charged than for the others.

All the stalls will be sold at auction in order to give a square deal, and the premiums will be divided into 12 equal payments and added to the rent. The rent includes merely the floor space and bare stalls without any fittings. The tables will be flat without any shelves, giving an uninterrupted view across the room. A cold storage plant is to be installed, the cost of which will be charged pro rata to each man in the market, being added to the rent. This will be not less than 50 cents a month.

Mr. Peirce detailed the rental arrangement by saying that growers having 25,000 square feet or under would be charged for one stall. If they have up to 50,000 square feet, they will be charged for two stalls. If up to 75,000 square feet, for three stalls, and up to 100,000 square feet, four stalls. Doubling up in one stall will not be permitted.

### The Side Booths

In addition to the regular stalls in the middle of the room, there will be a series of large stalls or booths around the sides for which a lump sum will be charged as an equitable rate to correspond to the charges for the smaller stalls.

Edward Wood of Lexington was called upon, he having had much to do with making arrangements for the new market. He expressed the committee's appreciation for the help given by florists owning automobiles, and spoke particularly of Mr. Comley's assistance in getting possession of the building.

Pres. Goddard stated that the meeting next month would be the annual meeting, and on vote of the members appointed a nominating committee to bring in a list of officers.

## SEEDSMEN MEET

### New England Association Discusses Corn Borer

Damage done by the European corn borer received much attention at the annual meeting of the New England Seedmen's Association held at the Parker House in Boston last Tuesday. Commissioner Gilbert of the State Board of Agriculture described the spread of this pest and warned the seedsmen that vigorous measures were necessary. He hoped that they would work for an increased appropriation from the states and the Federal government.

Pres. Alexander Forbes of the American Seed Trade Association was present and received a hearty greeting. He spoke of seed conditions, saying that market growers were demanding a higher grade of seeds and were willing to pay more for them. Quality is to be the watchword from now on. Mr. Forbes said parsnip seeds were very short. Field corn also is likely to be rather scarce and high. Grass seeds are about normal except some of the foreign seeds which are very short. Creeping Bent and similar grasses are especially short.

Alexander Forbes

The election of officers resulted as follows:

President, Willis S. Pino, Providence; vice president, A. P. Dewar, Boston; secretary and treasurer, Peter Miller, Boston; executive committee, George S. Wiliams, Providence; Everett P. Jones, Hartford; D. W. Webber, Lewiston.

Twenty-seven members were present, coming from all parts of New England.

## HARTFORD CONVENTION

### Wallace Pierson Tells Boston Growers Of Plans

At the growers' meeting at the Parker House in Boston last Thursday evening, Wallace Pierson, vice president of the S. A. F., detailed some of the plans for the convention to be held in Hartford next August. He said it was to be an "All New England" convention and he wanted the cooperation of Boston. He hoped the Boston florists would undertake to provide the bowling prizes; the New York florists were being asked for the women's prizes. Mr. Pierson said that without any doubt the armory would be available and that the hotels had promised ample reservations. Garage accommodations for 500 cars will be provided. Bowling alleys and everything else needed to make the convention a success will be ready. The Hartford florists have subscribed $2,000 for entertainment features.

**New Pink Carnation for 1923**

# MY WELCOME

The ideal commercial sort, possessing a beautiful shade of pink (not salmon); much deeper in color and a better grower than Enchantress, from which it sported. MY WELCOME is unequaled for productiveness and free from splits. Was awarded a Certificate of Merit, with a score of 90 points, by the New York Florists' Club.

ROOTED CUTTINGS, $12.00 PER 100; $100.00 PER 1000
Deliveries beginning December and filled in rotation

**HENRY HESSION**
Linden Avenue and East 49th Street BROOKLYN, NEW YORK

## RECORD OF 50 YEARS

### Prof. Sargent Tells What Has Been Done by the Arnold Arboretum

From the Arnold Arboretum in Jamaica Plain, near Boston, has just come a pamphlet of the greatest interest to botanists, horticulturists and plant lovers the world around. It is a record of the first 50 years of the Arboretum, and is issued in view of the fact that the first half century of the institution's existence has just been completed. The pamphlet was written by Prof. C. S. Sargent, the first and only director of the Arboretum, and gives a full account of the way in which it had its beginning.

There are now growing in the Arboretum between 5000 and 6000 species and varieties of trees and shrubs, and in his pamphlet Professor Sargent gives a complete list of the families and genera. In addition he has compiled a list of all the new plants introduced by the institution, a list which covers 19 pages of closely set type.

Professor Sargent emphasizes in this connection an agreement made between the college and the Arnold trustees to search out and to grow all the trees, shrubs and other plants which will endure the climate of New England. He points out that for more than 40 years continuous efforts have been made to live up to this contract. He says, however, that in spite of mnay thousands of new plants already introduced, there are still regions yet to be explored, containing, no doubt, many trees and plants still unknown in New England.

So far representatives of the Arboretum have visited every country in Europe, the Caucasus, eastern Siberia and Korea, and have studied every species of tree growing in the Japanese Empire from Sakhalin to the mountains of Formosa. They have visited the Malay Peninsula, Java, the Himalayas, the high mountains of Africa, Australia, Mexico, Peru and Chile and the Faulkner Islands.

The exploration of the tropical forests of the world will require perhaps a century and a large expenditure of money to accomplish. It is work that this Arboretum should begin and steadily push forward.

The Library of the Arboretum now contains 35,500 bound volumes and 8000 pamphlets and its collection of photographs now contains 9600 pictures of trees and shrubs, types of vegetation, gardens and scenery.

## *REMOVAL NOTICE*

**After January 1, 1923, we will be located at our**

**New Quarters: 541 Tremont Street**

We shall occupy one entire floor, which extends over an area of one half acre. While our service in the past has been unequalled our new facilities will permit us to increase our efficiency in every respect. We shall be enabled to carry a larger stock of florist supplies, and a greater variety. We shall continue to carry the highest grade of cut flowers procurable, and you will find that our service is unsurpassed.

# Henry M. Robinson & Co., Inc.

Our Telephone Number Will Be **Beach 8870** **Boston, Mass.**

The Arboretum needs a department for the breeding of new races of plants. Plant breeders from all parts of the country send to it for the material needed in their work, but this work can best be done here.

In closing, Professor Sargent says: "A rose garden and a rock garden, if planned comprehensively, would add much to the horticultural value of the Arboretum, and bring many visitors to it. Only a larger endowment is needed to make possible these Arboretum activities and extensions."

W. D. Howard, the well known carnation grower of Milford, Mass., has been enjoying a trip to New York, spending some time with Herman Weiss, who is handling most of the carnations from the Howard range. Mr. Howard also visited the carnation growers at Blue Point, Long Island.

Reg. U. S. Pat. Off. New Bedford, Mass.

### NEW BOILERS FOR DAWSON

William A. Dawson, the well known florist of Willimantic, Ct., has been greatly improving his plant this fall. He has installed two new boilers which are housed in a new building 32x22 feet. Another new building just erected will be used as a storage house, and will accommodate Mr. Dawson's delivery cars. It has been necessary to change the pipes in all of the greenhouses so that they will pitch the other way to conform with the new location of the boilers. Mr. Dawson does a big retail business and grows about everything except roses and orchids.

### WELL KNOWN FLORIST DEAD

There are many florists in New England who will learn with deep regret of the death of John Greenman, which occurred recently at his home in the country of Latvia in Europe. Until about two years ago Mr. Greenman was foreman for Wollrath & Sons, where he made a wide circle of acquaintances. He was generally considered one of the best growers that ever worked in New England, and the Wollraths were very sorry to lose him when he decided to go back to his native land and engage in business for himself. Mr. Greenman was 40 years old and leaves a widow.

### NEW PLANTINGS AT BRONX GARDENS

The rose beds at Bronx Park Botanical Garden, New York, are being replanted largely with the aid of Bobbink & Atkins, of Rutherford, N. J., who have contributed more than 2000 plants from their nurseries. These are mostly hybrid teas, and will be used to stock a dozen new beds, as well as replenishing old collections.

The lilac collection is also being improved through the aid of Theodore A. Havemeyer, who has contributed 150 plants from his nursery at Glenhead, L. I.

A new rock garden is being constructed near the entrance on the southern boulevard, using several hundred plants collected by Dr. A. B. Southworth and others, or raised from seed. A collection of plants has also been contributed by Clarence Lown of Poughkeepsie.

## OUR CHRISTMAS SPECIALTIES

Our eight page price list, containing the season's offerings in Greens, Wreaths, Christmas Ribbons and Seasonable Specialties, has been mailed. If you have not received a copy write us at once, and be up to date on all the latest and best. Among the items listed are:

**HOLLY WREATHS, MISTLETOE, LAUREL, RETINOSPERA, BOXWOOD, MAGNOLIA, HEMLOCK, ENGLISH IVY, ROPING, MEXICAN IVY, PINE CONES, IMMORTELLES, POINSETTIAS, RED FRIEZE, RED RIBBONS, GREEN MATS and other timely suggestions for the Holidays.**

### NATIONAL ASSOCIATION OF GARDENERS

The following are new members of the National Association of Gardeners:

Charles C. Case, Lake Forest, Ill.; Roy H. Caverly, Lowell, Mass.; Walter Hunt, Somerville, N. J.; C. M. Wagner, Baltimore, Md.; Sidney C. Abraham, Prides Crossing, Mass.; Neil McCallum, Pittsburgh, Pa.; William G. Williamson, Locust Valley, L. I.; John Cotterton, Elberton, N. J.; George Harbison, West Somerville, Mass.; John Costoff, Sharpsburg, Pa.; Joseph Reardon, Cambridge, Mass.; Donald Crighton, Ipswich, Mass.; James E. Bond, South Lancaster, Mass.; Arthur Gates, Purchase, N. Y.; J. D. George, Beverly, Mass.; Thomas J. Murphy, Chestnut Hill, Mass.; Niels G. Erickson, Magnolia, Mass.; W. D. Johnson, Nahant, Mass.; Edward W. Newman, Wollaston, Mass.; Alexander Taylor, Readville, Mass.; A. Atkinson, Whitestone, L. I.; Charles W. Smith, Harrison, N. Y.; Olaf Drewes, Boston, Mass.; James MacDonald, Tarrytown, N. Y.; John McIntyre, Garrison, N. Y.; Joseph Sewall, Mt. Kisco, N. Y.; Edgar Caddick, Wellesley Hills, Mass.; Donald Campbell, New York, N. Y.; Henry T. Raymond, Saxonville, Mass.; William H. Smith, Beverly, Mass.

New Associate Members are George Cruikshank, Boston; Lindsey B. White, Boston; George Strange, Rye, N. Y.; John H. Troy, New Rochelle, N. Y.

### NEW ENGLAND

At a recent style show in Clinton, Mass., the Sawyer greenhouses had a display which attracted much attention. On a background of green, the numerals 1891-1922, representing the period during which the firm has been in business, were formed by pink carnations. Above this display was an electrically lighted sign reading, "Say It With Flowers." Baskets filled with cut flowers and a large variety of potted plants were also used to beautify the booth.

In the case of Herbert V. Sowle, of New Bedford, Mass., who petitioned the court for an injunction to restrain his brother and nephew from engaging in the business of buying and selling cut flowers as the Sowle Floral Company, the Master decided in favor of the defendants, saying in his opinion they had taken every precaution to avoid having their business mistaken for that of the plaintiff, who had for many years made use of the trade name, Sowle, The Florist.

The Flower Emporium, of Pittsfield, Mass., managed by David Hickey, has moved its store, now being located in the new Y. M. C. A. Building. The Flower Emporium has built up an excellent trade, and has a very attractive store in its new location.

An extensive piece of work is being done in the Greenlaw Cemetery in Salem, Mass., in repairing the glass roof of the conservatory. The entire roof is being taken off in sections and reconstructed, and the work is being done without removing the plants. Lond & Burnham have the contract.

Miss Bertha Lougee, the well known florist of Portland, Me., was recently married to Mr. U. E. Carter, but will continue her store as in the past.

### NEWS NOTES

Mr. A. Jablonsky, of Olivette, Mo., who is putting out the new carnation Betty Jane, writes that so far he has had all the orders that he can fill. This carnation has been shown in several places, and apparently the trade thinks well of it.

The Unadilla Nursery, of Binghamton, N. Y., has employed C. A. Jackson, a landscape gardener, to represent it, and Mr. Jackson has been urging fall planting of trees and shrubs in the local papers, which has proved good publicity.

A memorial highway being built in Kansas will be lined on each side with flowering plants covering a wide range. The Boy Scouts of the state are to plant the seeds, and preference will be given to those kinds which are perennial or reseed themselves.

C. K. Peterson, of Long Island, has purchased the greenhouse business of John C. Robinson, of Ballston Spa, N. Y., Mr. Peterson is a graduate of the Denmark Horticultural College, and has had wide experience. He will carry on the business under the name of the Park Place Greenhouses.

## NATIVE BERRIES

At Christmas time we seek the bright red berries of the mitchella repens or partridge vine in our woods, also the ilex glabra or winterberry to mix with our Christmas greens. We plant shrubs which bear berries which attract the birds to our homes and brighten our winter landscape. Yet how many native, edible berries we have which the Indians may have enjoyed, but to which we have paid little attention.

On walks around Lake Sunapee, New Hampshire, I have enjoyed the sugar plums or fruit of the amelanchier, Juneberry or shad-bush, the last named coming from the early blossoming of this bush when the shad are swimming up the river. The checkerberries are used, for we get their flavor in our candies. The cultivation of the cranberry and blueberry are now large industries, yet how often we hear the blueberry vaccinium confused with the huckleberry, gaylussacia, although they are quite different in their form. The huckleberry has a core like a rose or apple, or as Bailey's cyclopedia states, a ten-celled ovary.

The cultivation of the blueberry and huckleberry would probably be much the same, as they both like a peaty, acid soil. So encourage an interest in the cultivation of both these berries. Hillcrest Gardens, through the Massachusetts Horticultural Society, is offering prizes at next summer's exhibitions for both blueberries and huckleberries. The prizes for blueberries have been offered for a number of years and have twice been awarded, once for berries grown in open cultivation to Mr. C. H. Chamberlain of Natick, and once to Mr. Albert C. Burrage for large blueberries grown under glass.

These prizes are offered with the hope of increasing an interest in our native berries.

M. R. CASE.

Hillcrest Gardens, Weston.

## GARDEN PHOTOGRAPHS

A feature of the Pennsylvania Horticultural Society Flower Show was an exhibition of photographs by the Society of Little Gardens. Twelve states had been given prizes or had had their photographs accepted by the Society for exhibition at this show. The first prize of $50 was awarded to Miss Florence M. Underwood, of Lake Forest, Ill., for the best development of a small garden. Special prize in this class, $20, went to Miss Bertha Slingluff Harry of Norristown, Pa. Mrs. Rademachey Pickenbach, of West Orange, N. J., received $15.00 for the photograph of a fountain artistically placed among woodland plants; and Messrs. Kirkhuff and School, Santa Barbara, Cal., received a prize of $15 for two separate photographs of city house fronts. Mrs. Benjamin Bullock, of Ardmore, Pa., received favorable mention, and Mrs. George Ogden Summers, of Oak Lane Park, Pa., had her photographs accepted.

## BRONZE TREE LABELS

Blanche C. Howlett has called attention to an unusually artistic label that has been used by Col. Clarence C. Sherrill to mark the trees in the parks of Washington, D. C. The label is made of bronze, with raised lettering, showing the common and botanical names. The first tree was labeled the past season, and was a large elm in Lafayette Park.

King
GREENHOUSES
THE SURE WAY TO BIGGER PROFIT

When a florist places his order for a King you can be sure that he, like hundreds of other King owners, is on the right track for bigger profit.

King greenhouses grow a larger percentage of firsts than other makes of houses and they cost less to operate. One grower tells us that his King greenhouses go a long way in producing the high grade stock he is sending out. Another florist says that the amount of coal used during a severe winter was less than we said it would be in an ordinary winter.

The quality of material and workmanship is the best and can be translated into one word—strength. A grower wrote us saying that in a severe sleet storm "we had considerable ice and snow on the houses but your construction stood the strain with no bad results whatever."

As for price and service read what this grower writes: "After comparing all propositions in regard to workmanship, service, details of construction and price, we were firmly convinced that your proposition was by far the best we had received and so placed the order with you."

*When you think of good greenhouses, think of KING*

**SAYS SAM: Nature never intended an eight-hour day for florists.**

---

**Costly Mums** Chrysanthemums were too high for the Thanksgiving trade. That is the general expression of opinion on the part of the retailers everywhere. Moreover, in many instances the quality was poor. Now it isn't so hard to get a long price for stock of the highest character, but it is not easy to get the public to pay heavily for stuff which they recognize as second grade. Moreover, the public has not been very much in a spending mood this season, and has shopped for flowers to a much greater extent than for several years. Of course the fact that Thanksgiving Day came so late as it did had something to do with the matter. It was difficult to have flowers of A1 quality in great numbers. Indeed, the likelihood of a shortage of first-class blooms was seen some weeks in advance.

The fact cannot be overlooked, however, that the price of mums was too high for the best interests of the trade, and that sales suffered as a result. Where it was possible to turn the customers to some other flower when objection was made to the high price of chrysanthemums, the florist got alone very well. In fact, some florists made a point of displaying potted plants, cyclamens in particular, in a prominent way, and sold them freely. As a matter of fact, the high price of cut flowers is often reflected in a bigger sale of potted blooms.

It is easy enough to find an explanation of a situation such as the one which existed this year, but, in spite of all explanations, the fact remains that the business as a whole is threatened by any tendency towards carrying prices so high that a natural reaction will be created, with the public inclined to stop buying altogether.

---

**The Arnold Arboretum** People everywhere who are familiar with horticultural matters know something about the Arnold Arboretum, Boston's great museum of living trees and shrubs. Few, however, seem to realize the extent of the Arboretum's work in introducing new and rare plants from distant lands. The pamphlet epitomizing the first fifty years of the institution's activities which has just been issued by Prof. C. S. Sargent, and extracts from which appear on another page, is an eye-opener in this respect. The list of worth-while new trees and shrubs which appears in this pamphlet is of amazing length, and gives some idea of the vast amount of travel and unstinted effort on the part of the Arboretum's representatives which have made it possible to grow so many plant immigrants in New England.

It is noteworthy that at the end of half a century Prof. Sargent is looking forward as keenly as ever to new discoveries in the plant world, as well as to development of the Arboretum in other ways. It is characteristic of the man that he has always had a forward look, never being satisfied with what has been already accomplished.

---

**The Bulb Situation** Mr. J. C. Vaughan, the veteran seedsman of Chicago, takes issue with a recent press bulletin from the Department of Agriculture at Washington in which the statement is made that good tulips can be grown here at a profit and are being raised in commercial quantities by several concerns. Mr. Vaughan declares that this statement is very misleading, that no commercial quantities of merchantable grade tulip bulbs have yet been produced in America and that the very small crops which have been grown are not sufficient to supply the autumn requirements of even one small jobber.

The truth is that the whole bulb situation is in a greatly disordered condition. Every little while reports drift in from some section that rapid progress is being made in the United States in the growing of bulbs, but when an investigation is made the number which can be obtained is found to be pitiably small in comparison with the trade's requirements.

Even the Dutch growers are having their difficulties. One of them declares that there will be a serious shortage next year, due largely to the ignorance of inexperienced growers who have permitted wide areas to become disease-ridden, with the result that large stocks of bulbs have had to be destroyed. This man predicts a special shortage in narcissi forcing varieties, hyacinths and Dutch iris. There is, however, from all reports, a large surplus of gladioli in Holland.

By the way, gladioli have been coming to the front as a commercial flower with remarkable rapidity. There have been predictions for several years that the business of growing "glads" would be overdone. Yet the point of saturation has not been reached as yet, although it is true that there was a glut of blooms in the great flower centers for a few weeks. The demand for corms still continues, but evidently the era of high prices is not yet over, A. E. Kunderd, of Goshen, Ind., being reported as asking $1000 a bulb for a liciniated type of gladiolus which he is introducing, but which will not be offered to the public before 1925.

# GRAFTED ROSES

It may seem early to talk roses for next spring, but we have been booking a lot of spring orders and you, who may be wanting a big lot early, may feel disappointed if we are not able to give you what you want when you want it.

Take up the question of spring requirements early!

# FLOWERS FOR CUTTING

## The Best Varieties of Dahlias and Gladioli for the Use of Commercial Florists

Mr. I. S. Hendrickson, of the John Lewis Child Co., Flowerfield, L. I., has been making up some lists of dahlias, gladioli and other flowers which are particularly successful when grown in a commercial way. Mr. Hendrickson points out that the dahlia is the ideal fall flower, and that every florist should grow some roots to keep up a continual supply. Among the varieties which he recommends are the following:

A. D. Livoni—Delicate pink, well formed flowers with a long stem.

Countess of Lonsdale—A blending of salmon pink and amber.

Dorothy Peacock—The color is a clear live pink.

Elsie Burgess— Delicate white ground tipped and suffused with lavender and faint light pink.

Glory of Lyon—A very good large white.

Jack Rose—Brilliant crimson red.

Lucero—Its color is bronze buff with a carmine flush and a deeper tinted center.

Minnie Baxter—Color, a dark maroon almost black.

Perle De Lyon—Color, pure white.

Princess Juliana—Pure white flowers.

Sylvia—Deep pink tinting to flesh pink at center.

If fancy varieties are wanted in a limited way such as the following would be useful:

Attraction—Large flowers of a clear lilac-rose color.

Break O'Day—Color is a delicate clear sulphur yellow, shading to sulphur white at tips.

Contrast—Intense crimson scarlet, beautifully tipped pure white.

Diana—Crimson, violet reflected.

Extase—Color white, edged and suffused pure mauve.

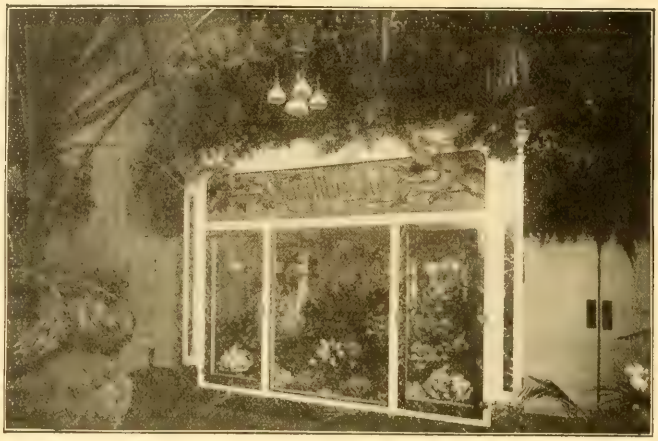
F. W. Fellows—The color is orange or terra-cotta.

Gladys Sherwood—Color pure white.

Hochsai—Color a mixture of scarlet and gold.

Kalif—In color a pure scarlet.

Minnie Baxter—A dark maroon, almost black.



Sunkiss—A glowing rosy salmon, center petals a lively canary-yellow.

Tom Lundy—A deep crimson.

Mr. Hendrickson also recommends that florists who have a little land available grow gladioli because if they choose the right varieties they can have an abundance of flowers which are good for wedding and funeral work at a very low cost. Of course one of

New Hybrid Cactus Dahlia Sunkiss

Christmas Telegraph Orders

FOR KANSAS CITY

AND ALL POINTS WITHIN
REASONABLE DISTANCE

SAMUEL MURRAY

1017 Grand Avenue, Kansas City, Mo.

the principal advantages of the gladiolus lies in its long keeping qualities. The commercial varieties which he suggests are:

America—Flesh pink.

Attraction—Deep, dark rich crimson, with pure white center and throat.

Augusta—Lovely pure white with blue anthers.

Autumn Queen—Color cream yellow, upper petals suffused with peak blossom pink, lower petals striped carmine-red.

Chicago White—White with lavender markings.

Crystal White—White with faint markings.

Evelyn Kirtland—A beautiful shade of rosy-pink, darker at the edges, fading to shell-pink at the center with brilliant scarlet blotches on lower petals.

Fire King—Color intense fire-scarlet.

Halley—Delicate salmon-pink.

Mrs. F. Pendleton—A lovely flushed salmon pink with brilliant carmine, or deep blood-red blotches in the throat.

Niagara—Delicate cream.

Panama—A deep pink.

Schwaben—Delicate pale yellow, dark blotch in center.

Scribe—Color rose, tinted white, freely striped carmine.

Peace—Large white with faint blotches.

Some of the blue shades are very popular, as: Catherine, Rev. Ewbank, Mr. Mark, and Viola.

Mr. Hendrickson advises that gladiolus corms should be planted about four inches deep if the soil is heavy, and five or six inches if it is light, so that they will not blow over during the flowering season. If quantities are grown it is best to plant them in rows from 18 to 36 inches apart, depending upon whether they are to be cultivated by hand or with a horse. The bulbs should be planted in double rows about four inches apart each way. This makes them easy to cultivate and to cut.

## S. E. SPENCER, PRESIDENT

### Officers Elected by the New England Gladiolus Society

An adjourned annual meeting of the New England Gladiolus Society was held in Horticultural Hall, Boston, Nov. 18, being called to order at 2.50 by Vice President S. E. Spencer. F. O. Shepardson was elected secretary pro tem.

It was voted to adopt The Gladiolus Bulletin as the official organ. Messrs. Brown, Norley and Proctor were appointed as nominating committee.

S. E. Spencer
Newly Elected President of the New England Gladiolus Society

A. L. Stephen was given a vote of thanks for his very efficient work on the schedule and at the exhibition.

At the invitation of Mr. Spencer the meeting was addressed by Mr. Chamberlain, a past president of the American Gladiolus Society. Mr. Chamberlain's remarks were very interesting and were heartily applauded.

The nominating committee returned and reported as follows:

President, S. E. Spencer, Woburn.

Vice President, Dr. S. Irving Moody, Brockton.

Second Vice President, William E. Clark, Sharon.

Treasurer, C. W. Brown, Ashland.

Secretary, Robert R. Walker, Mansfield.

Executive Committee, F. O. Shepardson, Mansfield; Charles F. Fairbanks, Lexington; A. L. Stephen, Waban.

Exhibition Committee, Robert R. Walker, Mansfield; B. R. Norley, Roslindale; Willis Chase, Mansfield; David Tyndal, Brockton, and Thomas M. Proctor, Wrentham.

Auditor, Jelle Roos, Concord.

The motion was made and carried that the secretary cast one ballot for the list of officers as nominated.

The president was authorized to appoint a committee of three as a griev-

ance committee for the ensuing year.

Extensive and extremely interesting remarks regarding the activities of the American Gladiolus Society were made by Dr. S. Irving Moody.

After considerable discussion a motion was made and carried that the president appoint a committee of three experienced growers, who shall be empowered to give an Award of Merit to any seedling which shall have previously received Honorable Mention at an exhibition of the society.

It was voted that all seedlings shown in competition at the annual exhibitions be judged by a committee composed of all the judges officiating at the exhibition and that an Honorable Mention shall be awarded only to seedlings which show distinctive meritorious quality.

An informal show of hands showed a unanimous approval of holding several meetings of the society during the winter.

### GLADIOLUS NOTES

The proprietors of the Sharon Gladiolus Farms, of Sharon, Mass., which has come in two years to be one of the largest commercial farms in New England, are planning for still greater activities the coming season. This concern now has 16 acres under cultivation, with an abundance of land available, and is dealing almost wholly in commercial varieties, shipping large quantities of flowers as far South as Philadelphia. Mr. Garrett de Longea and Mr. Theodore Kreeger are the owners, the former having had much experience growing bulbs in Holland. Last season they sent out as many as 1000 dozen cut blooms a day.

B. M. and M. E. Latham, of Mansfield, Mass, owners of Saunders Gardens, have accumulated a large surplus of gladiolus bulbs, which is going on the market the coming season. It is understood that they have nearly a million bulbs to dispose of. The Lathams made a high record for themselves last season, especially with their work at the show in Mansfield, when they put up one of the finest decorations ever seen at a "glad" show, using the variety Pearl for the purpose.

### BOOK NOTES

HARDY PERENNIALS, A. J. Macsell, Charles Scribner's Sons, New York, Price $2.75. This well printed, attractively illustrated book by an English author, contains much valuable information. At the same time it errs in a way common to such a book. It describes the good features of the various perennials, but fails to tell their faults, which it is about as important for a gardener to know. Bocconia, for example, is given warm praise and nothing is said about its habit of spreading all over the surrounding territory unless carefully watched. Baptisia is called one of the choicest perennials, but no mention is made of the fact that its blooming season is exceedingly brief. We hope that some time a book will be written which will tell the whole story about the plants suitable to a hardy border. In the meantime books like the one being reviewed must be depended upon, and are good as far as they go.

TURF FOR GOLF COURSES, by Charles V. Piper, Macmillan Co., New York. While this is not a new book, it is reviewed because of the many requests for such a volume. It appears that the makers of golf courses are often very much at sea in regard to what they should use in the way of grasses. This book covers the whole ground with remarkable thoroughness, and ought to have a place in the library of every country club.

William C. Medcalf, a well-known landscape gardener, died recently at his home in Rochester, N. Y., at the age of 92 years. Mr. Medcalf laid out the grounds of many large properties and private homes in Rochester.

## CLEMATIS JACKMANII

Clematis Jackmanii originated with George Jackman, an English grower, in 1862. It was one of the first hybrid Clematises introduced, and still remains the most valuable of its color, being very hardy and reliable. It is supposed to be derived from C. lanuginosa, a native of Ningpo, China. Some gardeners consider that C. Jackmanii is not a hybrid, but a species introduced from Japan. However, many beautiful hybrids have been produced from C. lanuginosa, though in many cases there has been so much intercrossing that the exact parentage is not recognizable. The most important group of these hybrids is classed under C. Jackmanii. Other fine varieties introduced by Jackman are Princess of Wales, bluish mauve, and Robert Hanbury, lilac flushed with red.

## NEWS NOTES

The John C. Meyer Thread Co., of Lowell, Mass., which makes the famous green thread for florists, is sending out some very neat notebooks which their friends in the trade are very glad to receive because of their convenient size and the two-year calendar which they contain. There are interesting pictures on the cover showing the large mills where the Meyer thread is made.

The Middlemount Nurseries have opened a new flower shop at 33 Hayward St., Nashville, N. C. Fully 3000 potted ferns and 2000 chrysanthemums were presented to visitors on the opening day. Otto Buseck, assisted by Mrs. Buseck, is in charge of the store.

The Utica Seed Co., Inc., has been organized at Utica, N. Y., with James F. Blatt, Jr., James O. Markle and C. D. Ladd as incorporators.

The Albany, N. Y., Commissioner of Public Works says that he will make no more public displays of chrysanthemums, believing that the citizens did not properly appreciate the show this fall.

W. A. Hollingsworth has opened a new flower and bulb store at 125 Peach Tree St., Atlanta, Ga. He is planning to do both a wholesale and retail business.

The Florida Floral Co. has been organized at Jacksonville, Fla., to do both a wholesale and retail flower and bulb business. The officers are E. G. Thomas, president; W. D. Driffing, vice-president; John Richardson, secretary; J. H. Thomas, treasurer.

# NEW CARNATIONS

**Rooted Cuttings, December and Later Delivery**

**BETTY JANE** (White Wonder x Ward). Color Ward pink, flowers large and perfect form and calyx. Very strong and easy grower; long, stiff stem, early and free bloomer, exceptionally good keeper and shipper. Orders filled in rotation. Rooted Cuttings, $12.50 per 100, $110.00 per 1000. Booked to the limit for December and January.

**SURPRISE** (Dorner). A new pink seedling, a trifle darker shade than Laddie, and more even shade. A well grown flower of Surprise is equal to Laddie in size. Strong grower, easy propagator; very early and profuse flowering habit; equal to the best of the standard varieties in production of flowers and will easily produce two to one of Laddie. Early and continuous blooms. The opening of the flower is quick and never bursts the calyx. Booked to the limit for December and January delivery. We suggest ordering at once for February and later delivery. Rooted Cuttings, $12.50 per 100, $110.00 per 1000; special prices on 10,000 or more.

**NATALIE.** Another Joy seedling. Not a fancy one but a wonderfully free bloomer, medium size flower, much freer bloomer than Ward and Almost the same color; good keeper and shipper. You will not go wrong in growing this one. Rooted Cuttings, $12.00 per 100, $100.00 per 1000. Early delivery.

**"OTELLO"** (Enchantress x Aviator). Color fiery scarlet, very large flower and as free as Aviator. A good, all around red Carnation. Rooted Cuttings, $12.00 per 100, $100.00 per 1000. December and later delivery.

**SUPER SUPREME.** An improved **Enchantress Supreme.** Rooted Cuttings, $12.00 per 100, $100.00 per 1000.

**IMPROVED WARD.** $12.00 per 100, $100.00 per 1000.

## THE WADSWORTH GREENHOUSES

A long article was devoted to the flower business of R. E. Wadsworth & Co. in a recent number of the Worcester, Mass., Post. This business is located at Northboro, where there are three large greenhouses. The company now has 40,000 carnation plants for filling the houses this fall. The houses already contain 12,000 chrysanthemum plants in individual pots. Besides flowers Mr. Wadsworth raised vegetables and sold 10,000 tomato plants this spring. He expects to grow 25,000 plants next year.

## IMPORTING BUGS FROM KOREA

It is reported that the State Bureau of Plant Industry in Harrisburg is planning to import from Korea parasites which are the natural enemies of the Japanese Beetle now doing damage in Florida nurseries and truck farms. It is reported that federal experts have discovered the bugs which hold down the destructive pests in Japan and that, if enough specimens from Korea can be obtained, the State will atempt to propagate them, it is said, and then release them in the Florida suburban and rural districts.

Stephen F. Hamblin has been appointed Instructor of Horticulture at the Harvard School of Landscape Architecture for a two-year term.

**BECOME A LANDSCAPE ARCHITECT**

Dignified, Exclusive Profession not overrun with competitors. Crowded with opportunity for money-making and big fees. $5,000 to $10,000 incomes attained by experts. Easy to master under our correspondence methods. Diploma awarded. We assist students and graduates in getting started and developing their businesses. Established 1906. Write for information; it will open your eyes. Do it today.

### BONNIE PRINCE

#### Propagation of Rose to be Undertaken by Portland Park Bureau

It is announced that the propagation of the new rose Bonnie Prince, which has been given outright to the Portland, Ore., Rose Society by Thomas N. Cook of Boston and Watertown, will be undertaken by the City Park Bureau. The Portland Society is greatly pleased with the gift, photographs of the rose and of Mr. Cook being published in the local papers. Pres. Guy W. Talbot of the Society is quoted as saying:

"We will arrange to have the rose distributed as widely as possible, and while I cannot hope for it to have the marvelous results of the Los Angeles rose, which is generally understood to have brought to its promoters and distributors near $20,000 in two years, I believe that Bonnie Prince, with proper handling at a popular price, will bring to the Portland Rose Society a tidy sum.

"We will consult the best rose growers and rose distributors on methods for handling our gift. Already Mr. J. A. Currey is in correspondence with J. D. Eislie, president of the Dreer company of Philadelphia, who distributed Los Angeles and other popular roses. Likewise he is in touch with Robert Pyle, president of the Conard & Jones company of West Grove, Pa., who has introduced so many successful roses, particularly those produced by the late Dr. Van Fleet. I also feel that Mr. Currey can obtain for the Rose Society the advice of E. G. Hill of Richmond, Ind., who, of course, is America's greatest rose producer and salesman.

"The gift of Bonnie Prince to the Portland Rose Society," said Mr. Currey, vice-president of the Portland Rose Society and the Pacific coast director of the American Rose Society, "is the greatest rose gift of history. I think if you search all rose history you will not find another case on record where the producer of a new rose has given his production away without the least restraint."

## IRIS AND PEONIES

Having a large stock of the following Iris will quote special prices for early delivery as I wish to clear the ground: **Arnols, Brooklyn, Darius, Dr. Bernice, Exquisite, Gypsy Queen, Halfdan, Helge, Ingeborg, Jacqueminot, Liabaud, Lord Salisbury, Mme. Chereau, Mithras, Mrs. H. Darwin, Nibelungen, Princess of Teck, Queen of May, Rhein Nixe, Rose Unique, Shakespeare, Sherwin Wright, Walhalla, Walneriana, Ven Geerti, Hector.**

Ask for price list and see what my customers say about the service they receive. Thank you.

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

### THE CRIMSON RAMBLER

Some time ago I observed a correspondence in your paper on the introduction to Scotland of the Rose "Crimson Rambler."

The late Mr. Hugh Dickson, Gent, Belfast, informed the writer at the time this rose was put in commerce that it was brought to this country by a marine engineer who had seen it growing in the East, and was so much struck with its great trusses of flowers and rambling habit that he brought it over with him and handed it to the then gardener at Mr. Jenner's, Edinburgh, where it was first grown in Scotland under the name of "Engineer." (Signed) Thomas Smith, Stranraer, Scotland.

# S. A. F. & O. H. Department

## ROLAND SUCCEEDS PIERSON

Owing to the pressure of business and the duties in connection with the office of state senator of Connecticut to which he has been elected, and the important duties in connection with the office of vice-president of the S. A. F. & O. H., for 1923, Mr. Wallace R. Pierson, of Cromwell, Conn., has placed his resignation as a member of the board of directors in the hands of President Pennock, to take effect December 1, 1922. President Pennock has appointed Thomas Roland, Nahant, Mass., to fill out the unexpired term of Mr. Pierson. President Elect Irwin Bertermann also heartily approves of the appointment of Mr. Roland.

JOHN YOUNG, Secretary.

# George Watson's Corner

"You in your small corner and me in mine."

After the Thanksgiving holiday prices are supposed to ease up a little. We asked Samuel about it, and he said no, that they had gone up, if anything. I said, "What's this, another case of stimulating a sluggish market by putting the price up?" He said, "No; but did you see that greenhouse man from New Jersey who has just been delivering some stuff?" On being asked, "Are you cutting much?" he said, "Not a darn thing—so it will be eight cents instead of six for next week." Wouldn't that jar you. I guess supply and demand has something to do with it after all.

Mole street has got a new pavement. Fine. Now if some genius would come along and give it a new name: Heacock or Meehan or Kennedy or Baker or some other high-toned designation like that, how happy your scribe would be.

Poinsettias, Cyclamen, Heather, Begonias; that's what strikes the Christmas visitor to Craig's at Norwood, the first thing. All in full bloom and done to perfection. But you see lots of other interesting Christmas gems, after the first dazzling blaze of glory, and after you have walked through about forty big houses. The Crotons in all their imagery of glowing colors; the Dracenas in endless variety; the Palms and Ferns in every imaginable form; big and little—slender and massive. Worth going a thousand miles to see, and only 21 minutes from Broad Street Station. Young Bob and "Van," his right bower, are to be congratulated. They get better and better, as the years roll by. No wonder old Bob went away happy, December 2nd, to Porto Rico after waving good-bye to all the family on the quay side of New York City. Everything goes well.

Miss Brown looked at the picture and said, "Young fellow, it's mighty lucky for me I did not meet you forty years ago. If I had, I'd've run away with you." Now what would you make out of that, a curse or a compliment? I said, "Never mind about that. This picture is for John Jensen, another sixty-over, and you are to give it to him when he calls, and ask for one of his in exchange." Miss Brown is some telephone operator, and gives as good as she gets, most of the time. Generally a little better. Beware!

Raymond Raff, the millionaire builder, gave the boys a good dinner November 21st. There were quite a few of the sons of Erin among the guests and

before the singing and speeching was half through (the hoo-rah lasted about six hours) they had amplified his name from Raff to Rafferty. So his name is Rafferty now.

Do you believe in lucky numbers. Miss Marcy says she has the honor to be aunty to twins this morning. And this morning happens to be 11-22-22. Five pairs. A pretty good hand, I'd say. Good luck to them! Six is my fetish. Born six in the morning, sixth of October, sixty-one; started in the seed business sixth of December, seventy-six and a whole lot more—if the editor would allow me the space. I have always had a secret respect for the nigger who put his last nickel on "come seven come eleven," and the one who swore by four eleven forty-four. I guess we all have a little superstition mixed up in our make-up if we'd only admit it. Miss Marcy is the cashier in the great Pennock Wholesale Flower Market and is much thought of by all who know her—and their name is legion.

Frank Walker, a distinguished horticulturist from Launceston, Tasmania, was a recent visitor, and was well taken care of by S. S. Pennock and others. His specialty is growing apples, and other fruits, for export. In case some of our readers may have forgotten their geography and imagine Tasmania to be a suburb of Kalamazoo, Michigan, we may be pardoned for stating that it is an island in the Southern Pacific almost as large as the great state of Pennsylvania, about 100 miles south of Melbourne, Australia. Their principal exports are fruits, wool, gold, tin, timber, and hops. Hobart and Launcestown are its largest cities.

Among other important people in our line, who have honored our old burg recently with a visit, we mention here a few among the many: B. J. Delaney, J. Chas. McCullough Co., Cincinnati, O.; Antoine Leuthy, Roslindale, Mass.; Wm. Gude, Jr., and George D. White, Washington, D. C.; Chas. H. Totty and Wm. Duckham, Madison, N. J.; Frank H. Traendly, Traendly & Schenck, N. Y. City.

The advancement of horticulture—that is the great aim of every enthusiast since we emerged from the dark

ages. Floriculture, of course, is a subsidiary of horticulture; but an important one. They both belong in the same glorious family. Both branches were included when the S. A. F. was formed, some thirty-five or forty years ago, and the S. A. F. has done wonderful work. Its children, of which the F. T. D. is one, have also done good work; but they should never forget the parent, nor narrow themselves down too close to their own limited field. To hear some of them talk, you would think they were the beginning and end of everything. Widen your vision, folks. Horticulture knows no latitude, no longitude.. It is world wide.

---

The Commodore thinks we are far past the age of common sense. Denny says we are only just beginning. So between the two of them, I finally gave in, and took the Lloyd George stand of—well, let the other fellow do it. We will see what we will see. I wish John Burton had been there. This was at the Kirk of a Friday. But he doesn't come in very often, any more. We hear he has had a sprained wrist. We extend sincere sympathy.

---

The La Crosse Floral Co., of La Crosse, Wis., now has 75,000 square feet of modern glass, and is specializing in roses, carnations and chrysanthemums. They have about 15,000 roses and 10,000 carnations at the present time, besides a great number of potted plants.

# O. K. Plant Spray

Kills Plant Insects, Scale and Mildew

Used by Leading Gardeners

Bbls. $90, ½ bbls. $50, 10 gals. $20,
5 gals. $10

Morristown, N. J., November 23, 1921.
Andrew Wilson, Inc., Springfield, N. J.
Gentlemen—I have much pleasure in recommending your O. K Plant Spray. I have always found it effective, safe and economical. Its users can regard all pests, insects and fungoid with equanimity.
It may be used with confidence on plants, trees and shrubs during the growing season. It is also highly commendable as a Winter spray for fruit trees, etc.
Yours faithfully,
SAMUEL GOLDING.
Supt. Mrs. Ridley Watts Estate.

# AMERICA {HILL'S}

AMERICA. The Beautiful. Delivery. Spring of 1923

We have not found it necessary to advertise this new rose extensively the past year, and we wish to announce that we are now quite sold, up to April 15 delivery, and are only accepting further orders for delivery after that date.

## ITS STRONG POINTS

Needs no pinching, except for exhibition lengths. Requires no more attention to produce "Extras" than to produce shorter lengths in other roses. Petals never "stick." Brings no "flat-heads." Belongs in the "thornless" class. Has "June-rose" fragrance. Beautiful shade of pink. Long pointed buds and flowers of great size.

***"Commercial Floriculture"***

Is the best book for practical florists ever written.

It gives the fruits of 50 years' experience and is written by one of the best known growers in the country.

It tells you what you want to know
About every plant you grow.

It is full of helpful pictures illustrating good plants and good plant houses. It is equally valuable for the beginner or the old-timer.

Price $5.00. Order from this office.

**Horticulture Publishing Co.**
Boston, Mass.

## THE MARKET

There was a slight slump in prices at the beginning of last week, but a gradual recovery throughout the week, with prices fairly high just before Christmas. Roses sold particularly well, 30 cents or higher being charged for Hadleys and Crusaders, with American Beauties selling at $2 apiece. Carnations sold at 12 cents or better. Lilies from 20 cents to 25 cents, with callas at four and five. Good sweet peas have been coming in and selling for four cents. Six cents or better has been obtained readily for calendulas, with chrysanthemums up to $4. Good snapdragons have been selling for $2 a bunch. The pansies which have been coming in the past week have been very well grown, and have brought $3 a bunch. Stevia has been selling from 50 cents to 75 cents. Prices of the lower grades have fluctuated so rapidly it has been difficult to keep track of them.

# Evergreens

**For All Purposes**

BEDFORD, MASS.

## WILL BE READY JAN. 1

### New Flower Market in Boston Nearing Completion—Auction Sale of Stalls

According to Pres. W. C. Stickel, the new flower market in the Cyclorama Building on Tremont St., Boston, will be ready for occupancy without fail on the first day of January, when it becomes necessary to leave the present quarters in Winthrop Square. The work of remodeling the interior will not be entirely completed, but about 15,000 feet of space will be available, which will be sufficient for the transaction of business until the rest of the big room is ready.

The work has been going on at a very rapid pace, from 50 to 100 men being on the job. A remarkable transformation has been affected in the historic structure, which is bound to become one of the show places of the city.

One of the final undertakings will be the setting up of the booths and stalls, but they will be in place by the last of next week. When the remodeling has been completed, an auction sale will be held, as in the present market, and the choice of stalls given to bidders who are willing to pay a premium for those considered the most valuable. It will be interesting to note which part of the new market is considered the best location. Of course the stalls on the Tremont St. side will be nearest the main entrance, but on the other hand, those on the Warren Ave. side will be close to the ramp and loading platform, which will facilitate the handling of shipments.

The contract for the refrigerating system has been awarded to the Frick Co. of Boston, and the system will be rapidly installed. It is an ammonia system, but the apparatus will be located outside of the market proper and separated from it by a 12-foot wall. The exact location will be in a room adjoining the boiler room. There will be one large refrigerating room, and a series of smaller chests for the use of concerns leasing the booths. The refrigerating room will be built by the United Cork Co. of Boston.

Vol. XXXVI DECEMBER 25, 1922 No. 12

## THE TALK OF THE TRADE

I frequently have occasion to write about an unusually good house of cyclamens, especially when traveling around Boston, and in the vicinity of Hartford, Ct., where some of the best cyclamen growers live. I want to say, however, that the growers of New England have no monopoly on first-class plants. There are other sections of the States where cyclamens are grown well and several Canadian growers have the business down fine. Mr. James McKenna, of Montreal, is especially successful with cyclamens. He had a house of wonderfully fine plants in preparation for the Christmas trade when I walked through it a few days ago.

Speaking of Connecticut growers I am immediately reminded of C. F. Curtis of Plantsville, who continues to hold his own with the best. What impresses me as I see his stock from year to year is the probability that he is turning in as high a net profit as anyone handling cyclamen.

I have seen larger and finer specimen plants than Mr. Curtis has, but I think there is no doubt that he could have larger specimens also if he wanted them. In fact, it is more difficult to do the small sizes in the excellent grade that he has them than it is to get the big specimens.

He has stock running all the way from 5 inches through to 7 inches in quantity that is of perfect finish. The foliage is all hard and stocky close to the pot, not lanky at all, and each plant seemed to be set heavily with buds when I saw them a few weeks ago.

I was also impressed with the wonderful coloring on his salmon cyclamen; very deep, fiery salmon and a large portion of them with highly colored silvery foliage.

I have not found many cyclamen growers who will sow seed so late as Mr. Curtis does. Some of his stock, which is well finished now in 5 inch pots, was not sown until January, and it is surprising how heavily budded these plants are at this time.

H. H. Smith, who has charge of the florist page in the Wisconsin Horticulture, makes a suggestion which may be of interest to florists and others who are expecting to exhibit bulbs at the shows the coming spring. He describes a display put up by Welke Bros., Wisconsin florists, who used crocus bulbs. These bulbs were planted in Florida moss, in a wooden shoe from Holland, and he says look very much at home, as well as making an exhibit which attracted much attention. Mr. Smith also speaks of another unusual arrangement, hyacinths being placed on strips of virgin cork with holes cut through to let them reach the water, and the corks floated in aquariums.

Without any question a well designed and a well executed letterhead speaks volumes for the enterprise and high standing of any concern. It is a matter, however, which is commonly overlooked or neglected to a large extent by florists and nurserymen, some of whom pay very little attention to their stationery. This is a great mistake. Good-stationery has remarkable advertising value. It is constantly being brought before people who are known to be buyers, and who often are led to give fresh orders by this means.

A good letterhead should give pleasure to the eye and at the same time focus on the mind the character of the firm which uses it. It should not be flamboyant, and should not contain too many words or try to cover too many subjects. At the same time the best results are obtained by some sort of picture, which tells at a glance the character of the business done by the firm using the stationery.

One of the best letterheads which I have seen put out by a florist or nurseryman in any part of the country is that of the Loudon Nurseries, Inc., of Irvington, Md. Mr. H. Clay Primrose, president of the company, says that he has received many compli-

The Handsome Letterhead Cut Used by the Louden Nurseries, Inc., of Irvington, Md.

mentary remarks about the letterhead, which is not surprising.

While the accompanying illustration will give an idea of the well designed combination picture used at the top of the letterhea, it does not do justice to the stationery itself, as the latter is printed by a special process which makes an unusually correct impression. I am sure that this matter is one to which many members of the trade can well give more attention.

---

It is a little early, of course, to talk about Memorial Day, and yet something which was told me recently by Mr. Warburton, the Fall River (Mass.) florist, may help other florists in planning their Memorial Day trade. The Warburtons have a greenhouse range close to one of the cemeteries. Just before Memorial Day one of these houses is filled with potted plants and thrown open to the public. A cashier is seated at a table close by the door. The visitors are allowed to circulate through the house and to pick out whatever plants meet their approval. All the plants are marked so that there can be no question about the price. The customer selects the plant, walks up to the cashier at the table, pays for it and passes out. In this way much time and labor are saved, and the customers are especially well pleased at having been able to make their own selection.

---

While several new roses of much promise are being put out in the States, florists should not overlook the fact that the Dominion also has a new rose, the merits of which are being sung enthusiastically by florists who have seen it. This rose was originated by John F. Dunlop & Sons, Ltd., of Richmond Hill, Ont. It was first known as Rose Seedling No. 6, but was christened the Royal at a public gathering recently before some 8,000 spectators.

The christening took place at the Royal Winter Fair in Ontario. Never before, I think, has such an event been recorded. The name Royal fits the rose well, as the bloom is an impressive one, being a bright shade of rose pink, with an orange base. Due to the latter fact it does not turn blue. The rose is a cross between Russell and Shawyer, with a stem equal in length to that of the American Beauty, but decidedly stronger. The bud is long and pointed, while the foliage is luxuriant, medium green in color, and extra large.

Another new rose shown at this fair came from the establishment of H. J. Mills, Ltd., Richmond Hill. This rose is light pink, with deep green foliage and medium sized stems.

In the local report of the show much attention was given to the yellow rose, Souvenir de Claudius Pernet, which was imported from France, being originated by Pernet, the great rose hybridizer of France, and named for his son, who was killed in the war. This is the rose which was shown in the States by C. H. Totty last spring, and excited much interest. Although it may prove an excellent rose under glass, I am doubtful of its value as an out-door rose, at least in the north. A plant in my garden made a poor showing last summer, and was very badly affected with leaf spot.

---

It seems that montbretias are again coming into the market in fair quantities. They have been very hard to obtain for several years, but a number of dealers are now cataloging them, and growers are apparently producing them without any great difficulty. I notice, for example, that the catalogue of the Chautauqua Flowerfields Co., C. Zeestraten, proprietor, of Bemus Point, N. Y., which has just come in, lists several of the montbretias at very reasonable prices.

These little bulbous plants are very easy to grow, and are extremely decorative, especially in the fall months. I am surprised that more general use of this has not been made. They are excellent as cut flowers, and there is no reason why florists who have room enough to grow gladioli for their own stores should not also grow montbretias and sell the blooms in the same way. The flowers last especially well, and the colors, mostly in shades of yellow and red, combine well with other blooms. Except in the extreme North it is not necessary to take up the bulbs every year, as they are hardier than those of the gladiolus. At least every three years, however, they should be divided, because then the clumps become too thick and need separation.

---

## NEW ENGLAND

Griffin, the Florist, of Lowell, supplied the flowers for an American Legion ball in that city. When asked what his charges would be, he said: "Nothing. I will gladly furnish everything that the Legion needs in that line free of charge."

## HEADS KIWANIS CLUB

### J. J. Cassidy Elected President of the Boston Kiwanians

J. J. Cassidy, a prominent florist of Boston, with a store on Beacon street, has just been elected president of the Kiwanis Club of Boston. This is a distinct honor, as the Kiwanis Club is made up of prominent business men in all lines of trade. There are very few florists in Greater Boston who have affiliated themselves with organizations of this kind, al-

J. J. Cassidy

though it would be well for the business as a whole if more members of the trade would take such action.

For several years Mr. Cassidy has been prominently identified with the club, and has been active in obtaining well known men for speakers, including Senator Lodge, Gov. Cox and Mayor Curley.

Mr. Cassidy feels quite at home in a position of this kind because he has served as Exalted Ruler of the Boston Lodge of Elks, and also as chairman of the Boston Sinking Fund Commission. Mr. Cassidy was appointed member of this commission by Mayor Curley, and served for four years, one year as its head.

South Boston was the birthplace of Mr. Cassidy, and 1879 the year of his birth. After graduating from High School he entered the employ of Wm. A. Doyle, then a prominent florist, and eventually became treasurer of the company. When this company was dissolved, he took over the Beacon Street store, where he has remained ever since, having a large and unique trade largely of a personal nature. His home is in Brighton, and he has five children.

## CHANGES AT ARLINGTON

### G. A. Anderson & Sons Acquire Two Greenhouse Ranges

G. A. Anderson & Sons have acquired the Janiten & Kunen greenhouses in Arlington, Mass., and in addition three large houses formerly owned by the W. W. Rawson estate, and used for growing vegetables. This gives the new concern an excellent plant, which is already in operation, and where some remarkably fine poinsettias and begonias have been grown for the Christmas trade. One of the sons, Nils Anderson, was formerly with the Mishawum greenhouses in Woburn, and is an experienced florist. John Gasson, who has been with W. W. Edgar, Frank Edgar and other growers, is to have charge of the Rawson houses, where potted plants are to be grown. Altogether the Andersons now have 75,000 feet of glass. They also have a retail store at 142 Warren St., which is well equipped, and where a good holiday business was transacted.

## BEASLEY'S NEW STORE

Joseph Beasley, proprietor of the W. W. Rawson florist establishment at Arlington, Mass., has leased the handsome store in a new building which has just been completed across Massachusetts Ave. from his present location. The new store has two large windows, and will be nicely decorated when Mr. Beasley takes possession shortly after the new year.

## RUANE'S GUARANTEE

Ruane, The Florist, of Waltham, Mass., has adopted the guarantee plan. He is said to be the first New England florist to take it up. Mr. Ruane now gives a guaranteed bond with every purchase, the bond reading as follows: "Ruane, Florist, Guaranteed Flower Bond: If these flowers are not satisfactory in every respect they will be replaced with other flowers or the money will be cheerfully refunded. Signed, M. F. Ruane."

## BOSTON.

Gustave Thommen, the well known correspondent of the Florists' Exchange, was confined to the house by illness several days last week.

Henry Penn featured a display of heather in pots which was shipped to him all the way from the Walter Armacost establishment in Los Angeles, and which attracted much attention

## VAN BAARDA'S NEW POSITION

### Becomes Vice-President and General Manager of the Breck-Robinson Nursery Company

Beginning with the first of January, P. J. Van Baarda, of Joseph Breck & Sons, becomes Vice-President and General Manager of the Breck-Robinson Nursery Co. at Lexington, Mass. Mr. A. E. Robinson, who has held this

P. J. Van Baarda

position in the past, has retired to take charge of the Atlantic Coast Nurseries at Portsmouth, Va., which enterprise was started a few years ago by Breck-Robinson and Conard & Jones of West Grove, Pa., as a general wholesale nursery.

Mr. Van Baarda is very well known in the trade, having been for seventeen years with BRECK'S. He was on the road traveling among the gardeners for several years, but lately has been manager of the retail department of the big Breck store on North Market St., Boston. A native of Holland, where he was born in 1881, he obtained a great amount of practical experience in his own land and in France, being employed by several of the most prominent concerns in both countries. In 1901 Mr. Van Baarda came to America and was connected with several important concerns here before entering upon his work with BRECK'S. He is a well known member of the Gardeners' and Florists' Club of Boston, and has a very wide circle of friends, both in and out of the trade.

No other changes will be made at the Lexington nurseries, Luther A. Breck continuing as President, John Benbow as Treasurer, Sheldon Robinson as Secretary.

Mr. James M. Adie, who has been in charge of the flower seed department in the Breck Store, will succeed Mr. Van Baarda as manager of the retail department. He, too, has had long experience in the business and is widely and favorably known.

## MAINE FLORISTS DINE

The Cumberland County (Me.) Florists' Association recently enjoyed a supper and entertainment at the greenhouse of George H. Maloon in Portland. The decorations included several new carnations from the Strout establishment in Biddeford. A centerpiece of Narragansett carnations was contributed by Roland Barrows of Portland, The speakers included Charles Pratt, Seleus Peterson, Linwood B. Miller, Roland Barrows and Edwin Ross.

## DEATH OF ROBERT J. SHORE

Robert J. Shore of Cornell University died Friday, December 8th, of pneumonia, after an illness of a week. Mr. Shore was born at Castle Comer in the north of Ireland, December 22, 1845. His father was gardener for J. W. Harper at Castle Comer and under his direction Mr. Shore got his early training. He came to America about 1865 as gardener on the Lienphal Estate at Yonkers. In 1882 he came to Ithaca as gardener for Jennie McGraw Fiske, and after her death, two years later, he entered the employ of the university, becoming official gardener in the conservatory of the department of botany, a position which he held until that department was given up last July. From then until the time of his death, he was in charge of the plants in the floriculture department. He was a 32d Degree Mason and an active member of the I. O. O. F.

## GENERAL NEWS

Paul Mader, the florist of Stroudsburg, Pa., has removed into a new store at 507 Main street.

Snell & Bronner have completed a new greenhouse at Herkimer, N. Y., with 10,000 square feet of glass. Mr. Snell and his wife are spending the winter at Daytona, Fla.

Miss Helen Howell, employed at the Wrigley greenhouses at Elmira, N. Y., recently suffered a broken shoulder in a fall from a stepladder.

The Sayre Floral Co. has opened a branch store on Main stret in Tonawanda, N. Y.

## THE FIRE AT PEMBROKE'S GREENHOUSES

It is stated that the damage done by the recent fire at the A. A. Pembroke greenhouses in Beverly, Mass., was between $5,000 and $6,000. The boiler house was wrecked and three machines, a sedan and two delivery trucks, were ruined. There was insurance on the sedan. About 30 feet of carnation plants in one greenhouse were lost, as well as 100,000 gladiolus bulbs which were in storage.

A note from Mr. Erwin F. Smith, pathologist at the Bureau of Plant Industry in Washington, says that the bureau is working on Delphinium leaf spot, and would be glad to receive material from any part of the country. Fresh specimens sent dry and wrapped in newspapers should be directed to the bureau, which is glad to have the help of florists and growers throughout the country in finding a remedy for this disease.

## New Pink Carnation for 1923

# MY WELCOME

The ideal commercial sort, possessing a beautiful shade of pink (not salmon); much deeper in color and a better grower than Enchantress, from which it sported. MY WELCOME is unequaled for productiveness and free from splits. Was awarded a Certificate of Merit, with a score of 90 points, by the New York Florists' Club.

ROOTED CUTTINGS, $12.00 PER 100; $100.00 PER 1000
Deliveries beginning December and filled in rotation

## BULB CONCERN EXPANDING

### Damen & Tromp to Grow Bulbs as Well as Import Them

Within a few months the firm name, Damen & Tromp, with an address at 80 Patton street, Springfield, Mass., has become familiar to the bulb growers throughout the Eastern States, and especially in New England. They are simply expanding a business which would have been developed long ago except for the war, when Mr. Peter J. Damen was called to the service of this country and served twenty-one months with the 78th Division.

Mr. Damen is a Hollander by birth, who has had long experience in the growing and handling of Dutch bulbs. He came to this country several years ago, and has gradually been building up his present business, his partner remaining in Holland. Mr. Damen's father is also in Holland, being engaged in growing bulbs for the past forty years, so that he has access to a stock of the best quality.

Mr. Damen does his own importing, and has done a very good business the past year. He expects to increase the business to a large extent next season, and is planning to make a home for himself in one of the central New England cities, where he will have an opportunity to grow some kinds of bulbs, especially gladioli and other bulbs which, under Quarantine 37, cannot be imported from Holland.

## CHRISTMAS IN BOSTON

Boston florists seem pretty well satisfied with the Christmas trade this year. Unusual attention was paid to evergreens of different kinds, and a vast amount of holly in very good shape was used. Florists like O'Brien, of Beacon St., and Harry Quint, of the Hotel Victoria, having an opportunity to make a good display outside the store, had particularly striking decorations, using Christmas trees freely. Caplan, of Massachusetts Ave., did a particularly large Christmas business this year, specializing in Christmas trees, of which he sold hundreds. Mr. Caplan used a unique method of advertising, one of his big sight-seeing busses being driven through the streets, carrying large placards announcing the Christmas specialities to be found in his store.

Charles F. Boyle, President of Thomas F. Galvin, Inc., was presented a large floral gift in the form of a horseshoe by the employes of the firm on the 25th anniversary of his connection with the concern.

## *REMOVAL NOTICE*

**After January 1, 1923, we will be located at our**

**New Quarters: 541 Tremont Street**

We shall occupy one entire floor, which extends over an area of one half acre. While our service in the past has been unequalled our new facilities will permit us to increase our efficiency in every respect. We shall be enabled to carry a larger stock of florist supplies, and a greater variety. We shall continue to carry the highest grade of cut flowers procurable, and you will find that our service is unsurpassed.

## GLUCOSE FOR RADIATORS

### Being Put Forward as a Substitute for Alcohol to Prevent Freezing

Florists who operate automobiles, whether delivery trucks or touring cars, will be interested in a substitute for denatured alcohol to prevent water from freezing in the radiators, which is being advocated by the Pennsylvania Department of Agriculture. The tests were made by Dr. C. H. Lawall, chief chemist, and the material used is ordinary glucose, which is much less expensive than alcohol, and comes in the form of a colorless liquid.

The investigations conducted by Dr. Lawall show that in proportions of one pound of glucose (1½ pints) to a gallon of water, the mixture in the radiator will not freeze until a temperature of 5 degrees above zero is reached. At 10 degrees above zero the mixture becomes slushy, but does not freeze, and does not interfere in any particular with the circulation of the water.

The glucose will not evaporate, as will alcohol, and providing there are no leaks in the radiator, one mixture of water and glucose will last for months. Another point in favor of the glucose is the fact that it does not have any ill effects on the radiator or on the rubber connections. The glucose may be purchased for from five to ten cents a pound. For an ordinary Ford car three pounds are required, larger cars requiring more.

## AMERICAN PLANT NAMES

We have received from the American Botanist at Joliet, Ill., the first part of a valuable work called "American Plant Names." It is devoted to wild flowers. The names are arranged alphabetically under genus and species, so that anyone who knows the plants by their common names will be able to connect them with the correct scientific terms. It shows whether the names that are being used are standard; it makes the common name intelligible; it indicates misapplied names; it lists all out-of-date names; it is cross indexed, and in every way will be found invaluble by florists, gardeners, nurserymen and botanists, as well as by all nature lovers. Willard N. Clute, in getting out this work, which is being issued in parts of 32 pages each, at the price of 50 cents a part, is doing a work which merits hearty commendation.

## PLANT A PEONY CAMPAIGN

"Plant a Peony This Fall," flashed in large letters of electric light from high up the facade of the City Hall, has been an influential factor in arousing the interest of citizens in this phase of a campaign for the beautification of Winnipeg, Canada. Hundreds of citizens already have procured their bulbs, and most of them have finished the planting.

The slogan, "Plant a Peony," was invented and popularized by Travers Sweatman, King's Counsel, while he was president of the Board of Trade. The present campaign has the full and active support of the Manitoba Agricultural Association.

Harold Welch, of the P. Welch Co., has been confined to the house by illness.

# RAMBLING OBSERVATIONS OF A ROVING GARDNER

I have been much interested in the rockery under glass which has been developed by Supt. Frank Reardon of the Harvard Botanical Gardens in Cambridge, Mass., and was pleased when Mr. Reardon told me the other day that the authorities have decided to establish a second rockery and on a much larger scale in another greenhouse. The present rockery is in the building where tropical plants were formerly grown. Raised benches have been filled with large stones and earth to form a suitable location for the plants. The new rockery will be in an adjoining house which is about 80 feet long. All of the heating pipes have been removed, and the principal bed will run through the center of the house, on a cement foundation. Rocks will then be built up on each side, sloping from the floor to the glass.

---

Hundreds of seeds of European plants seldom seen in this country have been sown in the propagation houses under the direction of Supt. Reardon, and when the plants are large enough they will be transplanted. There will be no heat in the houses, the temperature being allowed to fall as low as it may in the winter months. The plants used are all hardy, but there is a distinct advantage in having them under glass because the soil cannot be washed away by winter storms or the roots of the plants uncovered.

Moreover, they are easier to handle and can be studied to better advantage in a greenhouse. I was interested to find that the flowering time is only about a week ahead of the usual outdoor blooming dates. There are 350 distinct species in the present rockery, and 60 of them were counted in bloom at the same time recently.

---

These plants come from many parts of the world, most of them from high locations. They are particularly interesting because of the way in which they grow in the cracks and crevices among the rocks.

One very interesting little flower is called Veronica fruticosa, and comes from Greenland. Close by is Mimulus cupreus, a native of Chile. This is a relative of the well-known monkey flower, and has very curious blossoms. Androsace primuloides is a very tiny plant which grows at the highest point of all vegetable life in the Alps. It marks the line between vegetation and barren soil.

There are many handsome primroses from various parts of the world in the collection, including primula bulleyana from China. Most garden makers are familiar with the common gypsophylla or baby's breath, but would not recognize its near kin, gypsophylla cerastoides, which comes from the Himalayas. It is just as handsome, however, the small, white flowers being marked off with pink stripes.

The Himalayas are represented by several other plants in the collection, another specimen of special interest being mertensia echiodides, with small, dainty, blue flowers.

---

The country of Dalmatia sends the first campanula of the season to bloom. The rockery also has an excellent specimen of the first iris to bloom. It is called iris fimbriata.

With such a rare and unusual collection of plants as is to be found in the Botanic Garden, it is not strange that people come from distant states to see it. Primarily, however, its purpose is to offer a means by which students at the college may become familiar with these botanical subjects from many lands.

The Glassed-in Rockery at the Harvard Botanical Gardens in Cambridge, Mass.

There are many florists and gardeners in this country who would like to see a novel pot washing machine which has been patented in England, and which, it is said, will soon be put on the market. This machine has for its object the washing of garden pots and will do the work at a high rate of speed. If the inventor's claims are to be accepted, the machine will wash twenty pots per minute, or something like 9600 pots in a day.

The device comprises an endless chain which passes over sprocket wheels, one at each end of a trough which is mounted on a frame. The chain carries rings into which the pots are placed by hand. Every time a lever is pressed, a revolving brush descends and cleans the inside of one pot which remains stationary, while the other is lifted out of its ring and pressed against a revolving head when the outside part is also scrubbed by brushes. Then the lever is released, the brushes return to their places and the chain moves on one link, until the washed pots are finally delivered at the other end. Washing pots is a tedious task, and a machine that would do it rapidly and efficiently would be welcome.

## NORTHAMPTON CLUB ELECTS OFFICERS

Northampton, Mass.

The December meeting of the Holyoke and Northampton Florists and Gardeners Club was held on Dec. 5, with Pres. Hennessy in the chair, at Reginald Carey's greenhouses, South Hadley.

Members present made a tour through the houses and found an exceptional fine lot of carnations, with a promising crop for Christmas. Varieties grown by Mr. Carey are Matchless, Belle Washburn, Supreme and Morning Glow.

Being the annual election night, the following were elected as officers of the Club for the coming year: John Ellis, of Northampton, president; Prof. Thayer of Amherst, vice president; R. Haeseler of Northampton, secretary and treasurer; Executive committee, L. S. Hubbard of Amherst, chairman, Walter Thornily, Northampton, Reginald Corey, South Hadley.

The prize for the monthly exhibit was won by George Strugnell of Holyoke with a cyclamen, which any grower would be proud to possess.

Refreshments were served and a game of cards enjoyed until a late hour after the meeting.

The January meeting will be held with Gallivan Bros., Jan. 2, 1923, at Smith Ferry, Mass.

ALEX HAESELER, Sec.

## NEW ENGLAND

The flower business of Medfield, Mass., formerly conducted by the Medfield Farms and Greenhouse Co., is to be continued under the name of Pederzini & Sons. The former concern has been dissolved and the greenhouses as well as the dwelling house deeded to Mr. Pederzini, who is being widely congratulated on his good fortune.

The monthly meeting of the Horticultural Club, of Boston, was held at the Parker House, Wednesday evening of last week, with President E. H. Wilson in the chair. The speaker of the evening was Albert Jenks, of Acton, a well known fruit specialist, who talked on apple growing. The tables were ornamented with two large vases filled with seedling carnations from the range of William Sim. Several especially good carnations were noted in the lot, some of which are likely to be heard from later.

King
GREENHOUSES
THE SURE WAY TO BIGGER PROFIT

When a florist places his order for a King you can be sure that he, like hundreds of other King owners, is on the right track for bigger profit.

King greenhouses grow a larger percentage of firsts than other makes of houses and they cost less to operate. One grower tells us that his King greenhouses go a long way in producing the high grade stock he is sending out. Another florist says that the amount of coal used during a severe winter was less than we said it would be in an ordinary winter.

The quality of material and workmanship is the best and can be translated into one word—strength. A grower wrote us saying that in a severe sleet storm "we had considerable ice and snow on the houses but your construction stood the strain with no bad results whatever."

As for price and service read what this grower writes: "After comparing all propositions in regard to workmanship, service, details of construction and price, we were firmly convinced that your proposition was by far the best we had received and so placed the order with you."

*When you think of good greenhouses, think of KING*

**Says Sam: Allus argue with a mule face to face.**

**Making Collections**

There seems to be common agreement among florists the country over that collections have seldom been harder to make than at the present time. The result of this situation is felt all through the trade. When the end of the year comes and florists go over their books carefully, as required by the necessity of making out their income tax, they often are surprised at the size of the bills which some of their customers have been allowed to run up. These accounts seem to have multiplied this year to an unusual extent. It is a condition which means trouble unless it is remedied. The public is inclined to put off paying florist bills longer than any others, except perhaps those of the doctor and the dentist. In many instances, especially in the small towns, florists are cautious about pressing for the payment of these accounts, fearing that they will lose a customer. As a matter of fact, the right amount of tactfulness will often make it possible to keep accounts cleaned up much closer without giving any offense.

As a rule people who buy flowers are familiar with business procedure and would take it as a matter of course if the florist should follow up his accounts in the same energetic manner as other business men. Very much can be done over the telephone if the whole matter of delinquent accounts is put in the hands of one person who has a firm but pleasant voice, who is adaptable and who is polite but insistent. Then, too, it is very important to have some system by which delinquents who have moved can be traced. An intelligent person can often get track of such people through the aid of the corner grocer, expressmen, letter carriers and small boys. Oftentimes much can be accomplished by keeping a record of the persons to whom flowers are sent and also of the senders. A letter to the former asking if any informaiton about the latter can be given sometimes proves very effective. The fact that such a letter has been received is made known and the delinquent hastens to pay for fear of getting a bad reputation among his friends. Of course this whole problem is one which each individual must settle for himself, but the fact remains that the florist trade is suffering to a greater extent than usual just now from an accumulation of unpaid bills, and that some action is necessary to clear the situation.

## EDITORIAL NOTES

The Federal Horticultural Board at Washington is beginning to suffer assaults from new quarters. Of late it has been discussing the restriction of importations of fruits and vegetables from foreign countries on account of the Mediterranean and other fruit flies, which are alleged pests. Now comes the foreign trade committee of the Merchants' Association, which looks upon such prospects with great alarm, and plans a protest to the Board. It will be interesting to see whether such a protest proves to be any more effective than those coming from plant growers. However successful the Federal Horticultural Board may be in keeping out plant pests, it seems to function remarkably well as a tariff board.

Although the new flower market in Boston will not be entrely finished by the first of January or, for that matter, for several weeks afterwards, it will be in such condition that business can be carried on. The amount of work which has been done by the committee of arrangements to make this possible will perhaps never be realized by the trade in general. The whole undertaking has been an exceedingly delicate and difficult one to put through, and while there is not perfect agreement in all matters, the florists as a whole are pretty well satisfied with what has been accomplished. Without question the new market house will prove a judicious investment, as well as providing facilities for doing business unexcelled by those in any flower market. Horticultural visitors will make it a point to visit the new market whenever they come to Boston, and they will see flowers handled by the most modern methods and by a system not excelled anywhere.

It is interesting to note that all of the flower shows to be conducted by the Massachusetts Horticultural Society the coming year will be free. This, of course, is a decided innovation, and is brought about by a desire to increase the attendance. Whether the plan is wise or not will have to be decided by time. The general tendency seems to be to drop down on the quality of the shows for which no admission fee is charged. If this fault does not result, the experiment may prove successful. After all, though, it isn't so much the matter of admission charge, we believe, as of letting the public know that a worth while show is being carried on. Publicity is a great asset in these days of multiplied attractions. A show that is not properly advertised stands but little chance of gaining a large attendance, whether it is a free show or not.

We feel that Mr. Wallace R. Pierson sounded the right note in his talk given before Boston florists recently when he argued that the trade throughout New England should consider itself the hosts at the convention of the S. A. F. to be held in Hartford next year. While the Hartford florists must necessarily bear the brunt of the work, and are ready to do so, the florists throughout the New England states should feel that they have a very important part in making the convention an unqualified success. It is none too early for them to take the matter under consideration and perhaps to notify their co-workers in Hartford of their willingness to cooperate in any way, and to invite suggestions.

# GRAFTED ROSES

It may seem early to talk roses for next spring, but we have been booking a lot of spring orders and you, who may be wanting a big lot early, may feel disappointed if we are not able to give you what you want when you want it.

Take up the question of spring requirements early!

**A. N. PIERSON, Inc., Cromwell, Connecticut**

## GLADIOLI FOR FORCING

### Method by Which Florists Can Add to Their Income

That gladioli can be forced successfully and profitably by the florist is being stressed by the John Lewis Childs firm at Flowerfield, L. I. It is a fact, of course, that gladioli have glutted the market at certain seasons the last two years; thousands of stalks have been consigned to the dump, bringing, of course, no revenue to the grower. Scores if not hundreds of private growers have been putting gladioli on the market at prices with which the florist cannot compete. At the same time the florist who has a little land available, where he can grow gladioli for his own use, will find it profitable to make a fair planting of the best commercial sorts. This, of course, is quite apart from growing them under glass.

Gladioli can be forced without great difficulty, with a night temperature of 50 degrees. It isn't necessary to be fussy about the soil, and five inches is all the soil necessary if they are being grown on benches, although it is probably better to use them in solid beds. Some florists, however, like to grow them in 6-inch pots, using three bulbs. The early plantings of forced gladioli should be in by this time, but plantings can be made for another month or so. While forced gladioli do not need much attention in the way of spraying, they require to be staked in order to give them the straight stems which are necessary to have them sell well.

Watering is of more importance than feeding. The soil must never be too wet, and yet it must not be allowed to dry out entirely. There is

Panama, among the Good Gladioli for Forcing

not much likelihood of having too many forced gladioli on the market, and florists who can grow them without too much effort can make them pay, provided they take pains to choose first size bulbs and use varieties that are known to force well, including America, Panama, Mrs. Frank Pendleton, Halley and the Primulinus Hybrids, which as a rule force especially well.

## HAROLD RYAN PRESIDENT

### Officers Elected by Gardeners' and Florists' Club of Boston

Owing to the holiday season and the severe weather the last meeting of the Gardeners' and Florists' Club of Boston at Horticultural Hall was not very largely attended. Those present, however, heard a very interesting talk on poultry subjects, especially incubation, by Samuel Knowles, of the Norfolk County Agricultural School. At the conclusion of his talk Mr. Knowles was bombarded with questions, showing the interest of those present.

One event of the meeting was the annual election of officers, which resulted as follows: Harold Ryan, president; Walter H. Golby, vice-president; James Methven, treasurer; W. N. Craig, secretary; Executive Committee, George W. Butterworth, Framingham; W. H. Judd, of the Arnold Arboretum; Patrick W. Burke, Donald B. Sutherland and P. J. Van Baarda.

The following were admitted to membership: Thomas Roland and Robert Roland, of Nahant; Gustav Karlson, of Franklin; and Max Fishelson, the florist of Charles St., Boston.

**CHOICE GLADIOLI**
MRS. FREDERICK C. PETERS
Large Bulbs $1.00 each
Small Bulbs 50c each
Bulblets 10c each
WILLIAM EDWIN CLARK
Sunnymede Gardens, Sharon, Mass.

It was voted to hold the annual Ladies' Night on the 23d of January at Horticultural Hall. It was also voted to hold the annual banquet of the club at the Brunswick Hotel, which is a change from the usual custom. The banquet will be held some time in February, the date not having been definitely fixed.

It was voted to send letters to A. A. Pembroke and George E. Baldwin, members of the club, who have recently had their greenhouse plants damaged by fire.

In the course of the evening there was a discussion of leaf spot on roses under glass. One of the speakers said that he had found Wilson's oil an absolute remedy for this trouble. Several of the growers present reported the same experience, which seems to show that this oil is practically a specific for leaf spot, a fact which was learned with much interest by the other growers present.

## DAHLIAS UNDER GLASS

### How the Tubers are Sprouted and the Sprouts Rooted

Dahlia growers are giving increased attention to the starting of dahlia tubers under glass. This offers an easy and very satisfactory way for propagating a large number of plants. It also serves to produce extra good plants for setting out in the garden. The work should be started before the end of January. The usual plan is to plant entire clumps in the greenhouse, using enough heat so that they will sprout, but not too quickly. The sprouts are allowed to grow three inches tall, by which time they will have made a good set of leaves. Then they are cut off and rooted in sand. When well established they are potted up and placed in a cold frame to harden. There are some growers who believe that dahlias started in this way are preferable to those which are produced by dividing the tubers and starting the plants in the open ground. Then, of course, there is a certain sale of green plants, as the started dahlias are called.

In England it is a very common custom to start dahlias under glass. Over there, too, the plan of growing dahlias from seed is followed to a much greater extent than in this country on the part of back yard gardeners.

## NEWS NOTES

According to Prof. Daniel Lumsden, secretary of the newly formed American Horticultural Society, the late Representative Mann was greatly interested in horticulture, and for years maintained a little private nursery near Chicago where thousands of plants were propagated to be distributed to friends and acquaintances. Mr. Mann had a particularly large collection of roses and peonies, the latter being among the best in the United States.

The Townsend Floral Co. has leased a greenhouse and florist establishment at Winchendon, Mass., where business is now being carried on.

Mrs. Jennie W. Rogers, whose florist store on Summer St., Boston, has come to be a landmark, has decided to close this establishment on the 1st of January, after which date she will give her whole time to the fine new store opened by her and her son in Brookline. Mrs. Rogers has been in the florist business in Boston for a great many years, and has made a very wide circle of friends, both in and outside the trade.

## WOMAN'S NATIONAL FARM AND GARDEN ASSOCIATION CONFERENCE

The Woman's National Farm and Garden Association held its conference in Chicago on the eleventh and twelfth of December. As pleasure and charming hospitality marked the meeting of the Garden Club of America in Washington, so this conference was characterized by a simple, strong and earnest purpose.

The first matters of interest came at the counsel meeting on Monday morning where a desire was expressed to have the disfiguring signs removed from the entrance to Mount Vernon, our national shrine, and to have a national Botanic Garden established on Mount Hamilton, near Washington, overlooking the Potomac River.

At the opening of the conference at the La Salle Hotel at 3 o'clock Monday afternoon, Mrs. Russell Igson, president of the Woman's National Farm and Garden Association, introduced as chairman of the conference Mrs. Francis King, who was the first president of the Association and one of its original starters. Mrs. King spoke of her pleasure in meeting us all and told us of some of the newer garden flowers, the soft pink cannas, the clematis tangutica and the new ageratum. She then introduced Mrs. George W. Crocker, president of the New England Branch of the Association.

Mrs. Crocker spoke of the business transacted behind the bright green door, up one flight, of the new shop at 655 Boylston street, Boston, where the goods of the country producer meet the needs of the city buyer, or better still where they can meet each other over a social cup of tea on Thursday afternoon.

From Boston we were taken by Mrs. Charles W. Hubbard to Hawaii. She told us of the gardens there, especially of the low growth of the trees, as few of them except the tall palms grow above the two storied houses.

An earnest talk was also given by Mrs. A. E. Brigden of Rochester, New York, on "Home and Community."

Monday evening a dinner of seventy-seven plates was served at the same hotel, at which there were short remarks by Miss Julia Lita Bane, the State Leader of the Home Economics Extension Service of the University of Illinois, who spoke of Woman's Place in Agriculture; by Mrs. O. W. Dynes of Hinsdale, Illinois, who introduced a young schoolgirl who had a story about some pigs she had raised, and by Miss M. R. Case, who told of the twenty boys she employed on her farm, Hilicrest Gardens, Weston, Massachusetts, during their summer vacation. Mr. George H. Maker gave a talk on Town and City Planning, and Dr. Henry C. Cowles of Chicago University spoke of How to Make a Farm Lot Pay.

The meeting the next morning was characterized by much simple, earnest discussion about The Farm Woman Today and Tomorrow, by Mrs. Newton B. Ashby. The Public and the Farm Woman by Miss Lena M. McCauley of the press in Chicago. The Woman on the Farm by Mrs. Fannie Klinck of Clarksville, Iowa. Other speakers about home life on the farm were Mrs. William Gay Brown of Kingwood, West Virginia, Mrs. W. G. Jamison of La Veta, Colorado, and Mrs. Ellsworth Richardson of Pella, Iowa.

The morning conference was followed by a pleasant social luncheon with short talks and discussions.

At the afternoon session Mr. Frank B. White from the Agricultural Department of the Association of Commerce spoke on the Purpose of the Agricultural Committee of the Association of Commerce in Relation to the City and Down State Interests.

The whole feeling of this conference was of earnest intimate relations

# NEW CARNATIONS

**Rooted Cuttings, December and Later Delivery**

**BETTY JANE** (White Wonder x Ward). Color Ward pink, flowers large and perfect form and calyx. Very strong and easy grower; long, stiff stem, early and free bloomer, exceptionally good keeper and shipper. Orders filled in rotation. Rooted Cuttings, $12.50 per 100, $110.00 per 1000. Booked to the limit for December and January.

**SURPRISE** (Dorner). A new pink seedling, a trifle darker shade than Laddie, and more even shade. A well grown flower of Surprise is equal to Laddie in size. Strong grower, easy propagator; very early and profuse flowering habit; equal to the best of the standard varieties in production of flowers and will easily produce two to one of Laddie. Early and continuous blooms. The opening of the flower is quick and never bursts the calyx. Booked to the limit for December and January delivery. We suggest ordering at once for February and later delivery. Rooted Cuttings, $12.50 per 100, $110.00 per 1000; special prices on 10,000 or more.

**NATALIE.** Another Joy seedling. Not a fancy one but a wonderfully free bloomer, medium size flower, much freer bloomer than Ward and Almost the same color; good keeper and shipper. You will not go wrong in growing this one. Rooted Cuttings, $12.00 per 100, $100.00 per 1000. Early delivery.

**"OTELLO"** (Enchantress x Aviator). Color fiery scarlet, very large flower and as free as Aviator. A good, all around red Carnation. Rooted Cuttings, $12.00 per 100, $100.00 per 1000. December and later delivery.

**SUPER SUPREME.** An improved Enchantress Supreme. Rooted Cuttings, $12.00 per 100, $100.00 per 1000.

**IMPROVED WARD.** $12.00 per 100, $100.00 per 1000.

of the needs of rural life in America, so as a fresh breeze from over the seas came Mr. John C. Wister's beautiful pictures of European gardens, showing us the great exhibition held in Chelsea with its English arrangement of gardens; bulbs and tulip fields in Holland; gardens of France, Switzerland and Italy. In thinking over the whole conference it was good to have this beauty at its end, and to know that these same pictures had been shown in an evening school in Tennessee, for if we are to lift America out of the prosaic materialism which Sinclair Lewis showed in his Main Street, what better means than these beautiful pictures of gardens can be used.

M. R. CASE.

Weston, Massachusetts.
December 17, 1922.

### GLOXINIAS FROM SEED.

It is surprising that a large number of people, gardeners included, imagine that the gloxinia is a very difficult flower to raise and cultivate, and that a very warm greenhouse is essential to sucess, says a writer in the Gardener's Chronicle, London, who then continues; Such a fallacy is disproved at once by the mere test of cultivation.

Once over the initial difficulty of raising the seed a house with a night temperature of 50 degrees to 55 degrees is quite suitable for the plants that will produce a profusion of bloom from July onwards.

Sow the seed in a fine, peaty mixture, and if the seed pan is covered with a sheet of glass a sharp watch must be kept for the appearance of the seedlings, after which the glass should be removed and the plants gradually exposed to the light. A few days only need elapse before the little plants are transferred by means of a small forked stick to other pans containing a light, peaty mixture, placing them about half an inch apart. They will need slight shade from bright sunshine, and if the weather is congenial they will grow very rapidly; their next shift should be to boxes, spacing them about two inches apart.

By the end of April they will need to be transferred to 60-sized pots. In light soil they will readily fill the pots with roots and be ready for their final potting by the end of May. The soil for this potting should consist of two-parts black loam, one part peat, and the remainder of leaf-mould, sand and crushed charcoal; if the loam is known to be of poor quality a little old mushroom-bed manure may be added. I do not advise the use of artificial manures as they can be given if necessary at a later stage. When potting press the soil firmly all round the pot, but guard against very hard potting, which is often a cause of failure in gloxinias. Take care not to injure the foliage, which is easily bruised, and once marked the beauty of the plant is spoiled.

A close, humid atmosphere is at all

## IRIS AND PEONIES

Having a large stock of the following Iris will quote special prices for early delivery as I wish to clear the ground: **Arnols, Brooklyn, Darius, Dr. Bernice, Exquisite, Gypsy Queen, Halfdan, Helge, Ingeborg, Jacqueminot, Liabaud, Lord Salisbury, Mme. Chereau, Mithras, Mrs. H. Darwin, Nibelungen, Princess of Teck, Queen of May, Rhein Nixe, Rose Unique, Shakespeare, Sherwin Wright, Walhalla, Walneriana, Ven Geerti, Hector.**

Ask for price list and see what my customers say about the service they receive. Thank you.

**GEO. N. SMITH, Wellesley Hills, 82, Mass.**

times necessary, and shade from bright sunshine imperative, while careful watering and cleanliness will be all that is needed to bring the plants to perfection. The frequent use of the syringe in hot weather, under the plants rather than over them, will do more than anything else at this stage to keep them clear of red spider and thrip.

As the flowers begin to open, provide a drier atmosphere to prevent the flowers damping, and if spent flowers are picked off the plants will bloom until the late autumn, when the corms may be gradually dried off and stored for the following season.

The flowers last well when cut, and a large bowl filled with gloxinias, Adiantum fern, and Eulalia japonica is as charming a combination as one could wish for.

**There is a KROESCHELL for Every Greenhouse Plant, Be It Large or Small**

## George Watson's Corner

"You in your small corner and me in mine."

Some years ago they ran away from carnations. More money in roses. Now they are wishing they were back in carnations again. More money in carnations. Ain't we the foolish creatures, Battledore and Shuttlecock—all the time.

One has to have a pretty wise head on his shoulders, to stick to a line when it is getting a little bit overdone. Prices away down. Rose men getting all the money. Now! Let's get out of the carnation business, and go into rose growing. Now the carnation men, who stuck to it through thick and thin, are reaping their reward.

Paper whites are being quoted in the wholesale flower market here today (12-7) at six per hundred. Now, where does the grower come in on that when he figures the cost of the bulbs which the French Combine have so inflated. He loses money. The wisest thing to do is to cut them off the list, and grow something else. There is such a thing as killing the goose that lays the golden egg. And that's what these over greedy Frenchmen have done. And the goose once killed will never come alive again. We have got thousands of other things to take the place of Paper Whites. Farewell, totus albus grandiflora!

What the wholesalers ought to do in their advertising in the trade papers is not what they are doing, and have been doing right along—quoting prices a week or ten days behind the market. Flower prices fluctuate from day to day according to supply and demand. What the wholesalers ought to do is to study the art of advertising from a fundamental and altruistic standpoint. Godfrey Aschman knew how. He put a lot of Godfrey into it, and they came a running. Prices had nothing to do with it. Nor the place of business. If he had lived in a wilderness, they would have made a beaten track to his door. They wanted to trade with Godfrey. Prices and location were secondary considerations. What made John Wanamaker and many other celebrities? Space paid for? No. Personality! What they had to say day by day built up their business because they knew how to say it.

As the wise men have said—tragedy and comedy are closely allied—in our

poor old human carcasses. Of course, we were all talking about the passing away of the world's great merchant, John Wanamaker. A young fellow at my elbow said, dash it, why didn't he select some other day. I've just got in the finest lot of new Christmas stuff from Europe, and it's on the counters this morning. Now the store is closed. And before it opens again, the Jews all around will have me skinned a mile. There is no doubt but that that boy reveres his great master like we all do; but the human comedy of it is, that he couldn't forget the chicken he was chasing just for the minute. I asked Hogan about it. He said, that's all right, how about you flower men. Well, I said, putting it in that light, it might have been a little better if he had picked the date when flowers were plentiful, instead of when they were very scarce. Bluey!

---

We certainly do take some liberties with the mother tongue. "The Man Who Saw Tomorrow" is the title of a show being staged at Twelfth and Market St. Now, how could that be. No person ever lived who ever saw tomorrow. Of course there are dreamers and crazy people; but that isn't the point. And yet, for all that, the crowds were paying their fifties and going in to see this wonder. What fools we mortals be. If this incident were in the cruder sections of the country we would not be surprised; but in wise old Philly it seems rather astonishing.

---

The passing of Bernard Eschner of the Rice Co. leaves quite a gap in the florists supply business. He was a man of parts and highly respected by all who knew him.

---

What Frank Traendly thinks, and what Frank Traendly says, are two different things. To listen to him—sounds like a thunderstorm or a cynoclasm. But when you come to know him a little better—he's real human. So don't pay too much attention to his sarcasms when you first meet him. Just think them over, and forget them. He needs a shave like the rest of us the second day, and is liable to ask you—where is the nearest barber shop. Then, you know that the old timer is human after all! The New York boys know him pretty well; but outside of that little burg he is a bit of a mystery. Boys—forget it. He only makes believe he's one of these dynamite O. N. T. things. He doesn't really blow up! Big schoolboy—old as he is. If I was half his weight and muscle, I'd give him a good licking.

The MEYER GREEN FLORIST'S THREAD have stood the test for the last fifty years, and are used and recommended by the leading Florist houses today.

Guaranteed 2 ounces of actual thread to the spool, 16 ounces to the pound.

Be sure and get the MEYER GREEN FLORIST'S THREAD and take no other.

Manufactured by THE JOHN C. MEYER THREAD CO., LOWELL, MASS., U. S. A.

Christmas is past and we all had to celebrate. The florists are the chief winners as their product expresses the sentiments of us poor human beings in the finest form. In my young days we called it "Auld Yule" and that came about twelve days later than our modern Christmas. The Pope had to change the date by order of the astronomers because we had been running behind in our yearly figuring. It took the old fashioned Scotch and Russians and others a few hundred years to get around to the new date for Christmas; but we seem to be all fairly unanimous now. The winter festival and the spring festival antedate the era of Christianity but the pagan idea was continued and only the name was changed, which showed good common sense—as well as sentiment.

---

Ed Fancourt of the Pennock Company has just returned from a Southern visit. He saw most of our old friends in the Carolinas, Georgia, Florida, and Texas—not to mention other states of importance—and they all seem to have a kindly feeling for William Penn and Sam Pennock. Down at Second and Walnut there's a sign on a very old house:—"Here was born William Drinker in 1680, the first child born in Philadelphia." Is it any wonder his descendants are down on the crazy Volstead stuff

Philadelphia.

Interior of Voorhees New Carnation House

# Voorhees and Sons Wrote This Ad.

Wrote it by writing a letter to us.

Knowing that what owners of our greenhouses say about our houses and ourselves, means a lot more to you, than what we might say, we are just letting their letter say it.
Here it is, just as written from their place at Hilton, N. J.

"Through the thoughtfulness of your salesman, we are just in receipt of two photographs of our new Carnation house.

"We did not expect them, although from past experiences, it is one of the links of the Hitchings chain that comes along at completion of a house.
"It's but another instance of the usual Hitchings way of doing things right, even to the photographs.
"We sincerely thank you for the many interests taken in our behalf."
To which let us add, that we go anywhere for business, or to talk business.
